eisysSatin Frameless Glass Marker Boards

eisysSatin Glass is Starphire glass with a true non-glare surface. It has been rigorously tested to insure it lives up to its non-glare properties, which is better resolution of written information on the board and minimal distraction from reflections.

eisys Satin is used in a wide range of applications primarily for its aesthetics, its NON-GLARE properties, relative ease of dry erase-ability and the fact that with EXIMO, it cleans up beautifully, even if written on with a Sharpie.

eisysSatin can function as a project-able board, but it is not the proper, nor is it the ideal surface for projecting client presentations. It does not provide as clean and crisp an image as traditional projection screens, flat screen TVs or optical presentation screens.

So why choose eisys Satin?

Aesthetics. A beautiful, floating, frameless glassboard, almost like a piece of art

Dry Erase/Writing Properties. Most so-called non-glare or anti-glare glassboards typically are velou etched glass, which requires WET erase solutions

Durable Scratch Resistant Surface. eisysSatin always comes clean with very little ghosting and looks pristine after cleaning, even when a Sharpie has been used.

Non-Glare Feature. In a wide variety of lighting environments, eisys Satin provides better resolution of written information and minimal distractions from reflections.

Project-ability. An excellent writing surface with exceptional clean-up properties that can be used for "in-house" projections and presentations. It is not designed for High Resolution client/public presentations
