RE: Simple Green® Aerosols, Dilution and Secondary Labels

To Whom It May Concern:

Thank you for contacting Sunshine Makers, Inc., the makers of Simple Green® cleaning products.

Our Simple Green aerosolized products are ready to use formulations that are not intended to be diluted nor are the labelled with instructions on how to be diluted.

Simple Green aerosolized products come in a sealed metal container that are not easily opened. The containers have a dispenser for the ready-to-use chemical to be expelled as a foam – making dilution tedious and impractical.

Simple Green aerosolized products are designed to be ready-to-use right out of the can from the packaging to the actual ingredient volumes in the formula. As such, there should be no reason to mix the resulting foam with any other chemicals – including water – prior to application.

Secondary labels are a requirement when chemicals are diluted in the workplace. These products have been designed to be ready-to-use, straight from the canister, and therefore have no need for a secondary label. The primary label states all the required information for sale and use.

I hope this information has been helpful. If there is anything more I can assist you with, please let me know.

Sincerely,

Laura Lorincz
