SAFMAXX™

HAND SANITIZER. MICROBIOLOGICAL SHIELD. KILLS 99.99% OF GERMS. PROTECTS UP TO 4 HOURS.

Are you protected after ordinary, alcohol-based, hand sanitizers evaporate mere seconds after use?

Commonly-used hand sanitizers may kill many germs initially.
Then, poof—they're gone—leaving behind dried out, unprotected skin.

Use SAFMAXX as directed, and **up to 4 hours** in the future, uniquely-formulated SAFMAXX is still protecting you from 99.99% of germs—some life-threatening.

The FDA allows only 3 active ingredients to be used in hand sanitizers. Choose the one that is safe for use by you and your family, gentle to skin and non-drying, and effective for up to 4 hours. With 0.13% Benzalkonium Chloride as the active ingredient, you're protected.

That's SAFMAXX.

SAFMAXX delivers persistent, glove-like coverage—a microbiological shield against 99.99% of germ dangers lurking on high-touch points and surfaces in the home, office, school, healthcare areas, public spaces and transit.

Sizes for home, office, industry, institutions—and on the go!
