PaperCut™ Hive

PRINT MANAGEMENT IN THE CLOUD

- **Print from any device, anywhere, to any printer in seconds**
- **Convenient print release options**
- **Simple and quick onboarding for users and guests**
- **Copy and scan tracking**
- **Secure and contact-free printing**
- **Easy integrations with other services**

Simple, powerful print management in the cloud. Convenient printing for everyone.

PaperCut Hive is a cloud-native, fully embedded print management software for businesses that need a secure and flexible printing solution to track, control, and enable print, copy, and scan.

With the introduction of BYOD (Bring Your Own Device), mobiles, multiple operating systems and mixed printer brands, printing got complicated. For both users and IT. Now PaperCut's severless printing makes printing easy again.

DATA SECURITY TO REDUCE STRESS

PaperCut Hive has security features built in to keep your documents private and on-site, helping to protect your data before, during, and after printing.

Before: Access control

Keep printing activity above board with authentication at the multifunction device (MFD). Choose when and where users can print.

During: Secure release

Securely collect jobs at the MFD using a phone, ID card, or the MFD touchscreen. Our innovative self-healing Edge Mesh and IoT technology also keeps your documents in the local network to avoid chance of data breach.

After: Watermarking

Ever had a mystery document show up on the printer and not know how long it's been there or who sent it? With watermarking, you can see key info that helps you grow and create safer printing practices for the future.

SHRINK YOUR ENVIRONMENTAL FOOTPRINT AND YOUR BILLS

Giving back to the earth and your printing budget, PaperCut Hive boasts eco-friendly policies perfect for businesses that are conscious of their environmental impact – so you can reduce paper waste, save on toner/ink, and make sustainable habits the status quo.

Responsible reminders

Give users a friendly nudge to print double-sided or grayscale with timely prompts in-touchscreen. You can even choose the frequency to create a positive force for change, rather than annoying users into being responsible.

Zero uncollected print jobs

Users authenticate to receive their print jobs, therefore eliminating uncollected jobs in the printer output trays.

Print job safety net

Oops, did you mean to print 9,999 pages? Turn on the safety net to catch the most common printing mistakes such as duplicate prints, too many copies, or even printing at all.

WHAT IS SELF-HEALING EDGE MESH?

The Edge Mesh is all the combined power of your existing computers working together to do the job of a traditional print server, and it's self-healing because when one computer fails (or a laptop lid is closed), printing will still function, without intervention!

WHAT'S THE PERK?

Strength in numbers

Making the most of tech you already have. The more people you invite, the stronger the mesh becomes.

High Availability baked in

Redundancy, failover and load-balancing is built in.

The right stuff in the right places

Your print jobs stay local, keeping print processing times fast and data security locked down.
