## XSite Signage

### 2" Curved Surface

This product is the perfect solution for organizations that want to contain the cost of their initial signage requirements and the maintenance cost associated with signage. The "XSite" 2 inch Curved Surface Sign offers a solution for every audience and spans the gap between cubical and private office signage.

Messages are extremely easy to replace and the options for message inserts can be as simple as your own printed paper/vellum insert or our printable, moisture resistant, high resolution, plastic insert.

These signs come with mounting options that meet every installation challenge. Appenx has worked with manufacturers, contract furniture dealers and end users to develop specialized mounting options beyond our standard offering listed on this product sheet. Please call us if you have a unique application. Screw and pin mounting applications are hidden behind the replaceable window background insert

Need a special width? No problem, just call and we'll make it standard for you. The 3-1/2" size even accommodates a standard business card.

An optional tactile lens is available for numbered private offices. A paper message can be inserted behind the tactile lens to display anything you want.

*Look to Appenx.... to meet or exceed your signage requirements.*
