Note: 66" & 72" wide screens – if applying directional fabrics they will need to be railroaded for application. If using a COM fabric that is 54" wide, any screen over 48" wide would need to have the fabric railroaded as well.

C.O.M. Fabric Policy

- It is mandatory that you work directly with your AIS Customer Service Representative for all COM related testing and orders. They will provide all necessary forms to you, as well as work with you with regard to sending in correct yardage and where to send it, along with necessary RA# or #s. Please note an RA must be submitted along with the fabric for testing, as well as an RA created for an actual order.
- Please Note: A three to five yard sample is required for testing and approval for use on all monolithic panel systems. A one yard sample is required for testing and approval on Divi Insert Tiles, Matrix Tiles, flipper doors and tackboards. We may be able to test upholstery fabrics with a swatch, your Customer Service Representative will advise based on the fabric being tested; otherwise a 1 yard sample must be submitted for testing. Results take 48 - 72 hours.
- Customer Service must be advised as to the width of the fabric rolls being supplied (54"W or 60"W). Customer Service must also be advised if the fabric has a backer.
- Yardage required for the job must be calculated by an AIS Customer Service Rep.
- Once AIS has approved the COM fabric, a fabric sample needs to be marked by the dealer with "Front", "Top", and "Bottom", to be sure fabric is applied correctly. The fabric sample then needs to be attached to a COM Fabric Dealer Form and forwarded to AIS Customer Service. [The COM Fabric Dealer Form may be downloaded or printed here.](#)
- Fabrics may be discontinued or obsolete without notice.
- Contact AIS Customer Service with any questions regarding fabric availability.
- All directional fabric will be railroaded.

Product Detail 2

Rules for Panel Stability without Components

The guidelines outlined below should be followed when designing AIS AO2 panels without components to ensure panel stability and safety. Change in height will not effect panel stability. Any panel not directly attached to a perpendicular panel or fixed wall will yield when pressure is applied.

Rules for Panel Stability with Components

The guidelines outlined below should be followed when designing AIS AO2 panels with components to ensure panel stability and safety. Change in height will not effect panel stability. Any panel not directly attached to a perpendicular panel or fixed wall will yield when pressure is applied.

* 30" worksurfaces must be supported at the front with side support brackets or floor support elements/pedestals.

A02 Panels Product Details

Product Detail 4

Panel Creep Dimensions

Small increments are added to or taken away from the length of a run of panels as a result of the many ways panels are connected to each other. The accumulation of these increments is called Panel Creep. While AIS A02 panels are "actual" size, the addition of 2-way, 3-way, 4-way, end, and wall mount connectors add increased dimensions.

Straight Connections:

Add 0" to panel run for each straight connection. 24"W (nominal) panels are shown.

2-Way Connections:

Add 3 1/2" each time a perpendicular panel is added to the end of a panel run.

3-Way Connections:

Add 3 1/2" each time a perpendicular panel is inserted into a panel run.

4-Way Connections:

Add 3 1/2" each time a perpendicular panel is inserted into a panel run.

Finished End Connections:

Add 1" to the end of a panel run for each finished end cap.

Wall Mount Connections:

Add 1/2" to the end of a panel run for a wall mount connection.

Notes

- Wall Track mounts to fixed walls to provide a slotted channel for worksurface support brackets, tackboards or shelves.
- Slots are on a 1" vertical repeat pattern.
- Wall track mounting holes are 1/4" diameter, repeating 6" on center starting 1/2" from top of the track.
- Hardware for mounting wall track to walls is not included. Use hardware appropriate to wall type.
- Wall track may be shared between shelf units. Only three tracks are needed to hang two shelf units, flipper door units, or tackboards side by side.
- Wall tracks are composed of a black slotted insert rail within a brushed aluminum casing.
- Track will sit approximately 5" off floor when leveled with top of panels to accommodate wall cover base.
- **Important:** Wall track may be shared with Matrix and AO2 storage. Wall track may not be shared with Divi and MWall storage.

Notes

- Paint Selection for HiLo Finishing Strip
- HiLo Finishing Strips are used when 2-Way, 3-Way, or 4-Way connectors are connecting panels of varying heights.
- The HiLo finishing strip finishes the exposed side of the connector where a low panel is attached.
- For instance, if you have a 67"H 2-way connector with one of the panels being 47"H, order the HiLo finishing strip for a 67" to 47" drop down.

Electrical Components (8 Wire, 4 Circuit)

AIS A02 8 Wire 4 Circuit electrical system contains four circuits. Each circuit is rated at 20 amps/120 volts maximum. Circuit 1, Circuit 2 and Circuit 3 are served by a system neutral and an equipment ground. Circuit 4 is dedicated and is served by its own neutral and ground. Circuit and ground conductors are #12 A.G.W. (gauge). All neutrals are #10 A.G.W. (gauge).

Shown below is cross section of metal cable used for 8 Wire 4 Circuit jumpers and in-feeds. Circuit and ground conductors are #12 A.G.W. (gauge). All neutrals are #10 A.G.W. (gauge).

Powerways provide electrical distribution and access for duplex outlets back to back. 24" wide panels can accept only one duplex outlet per side, two total back to back. All other panels can accept two per side, four total back to back. Powerways "grow" in length with panels of greater width, making panel to panel connections a "standard" configuration and allowing for "pass through" connections. Each powerway has locations for up to four jumpers, two at each end. Powerways are included when ordering powered panels.

Duplex Outlets are available designated circuits 1 thru 4. Each duplex outlet contains two single receptacles (places to plug into) of the same circuit and are specified separately from powerways. All duplex outlets have black faces. The lettering on outlets for Circuit 1, 2 and 3 is white. The lettering on outlets for Circuit 4 is orange. Outlets are screw mounted to powerway. Duplex outlets are standard 15 amp outlets. For 20 amp outlets, call AIS Customer Service.

Double Channel Power/Data Pole

1. Grip Attachment Strip:
72" length can be cut to fit and bolted to pole and ceiling grid with hardware provided.
2. Pole Cover:
Snaps in place to seal vertical channels.
3. Divider:
Attached to pole shell threaded studs with rounded safety "acorn" nuts. Divider may be mounted on centered or 60/40 split to accommodate more data cables.
4. Pole Coupler:
Slides into both halves of pole. Four threaded screws are tightened to form rigid pressure fit.
5. Mounting Brackets:
Engage opposed on panel hanger frames to lock lower section of pole to panel. Bracket threaded studs and rounded safety "acorn" nuts attach pole to brackets.
6. Pole Shell:
Relieved on one end to provide means of egress for data cables and ceiling feeds. Pole top and bottom section are identical.

Jumpers

STANDARD PANEL-TO-PANEL JUMPERS

L	Model Number	List
18	E-MX8W4PTPC18	212
21	E-MX8W4PTPC21	222

Notes

- Panel-to-Panel Jumpers connect any two adjacent powered panels connected in a straight line or at a 90° angle.
- Order an Extended panel -to-panel jumper to connect any two powered panels across the gap created by a 3-way or 4-way connection.
- 90° corners and straight panel-to-panel connections do not require an extended jumper.

TRANSITIONAL JUMPERS

Type	Model Number	List
OEM Transition Kit	E-HM8W4TCK	926

Notes

- Transitional Jumpers connect any two adjacent powered panels with different versions of power connected in a straight line or at a 90° angle.
- See diagram for reference.

Notes

- Lateral Pass Through Jumpers pass through a non-powered panel to connect two powered panels.
- Specify the jumper that corresponds to the width of the panel to be passed through.
- In extended pass through situations, specify the next lateral pass through jumper size in order to span the additional gap created by a 3-way or 4-way connection.
- 90° corners and straight panel-to-panel connections do not require an extended jumper.
- Specify the jumper that corresponds to the width of the panel to be passed through.

2	E-HM8W4T24D02	85
3	E-HM8W4T24D03	85
4	E-HM8W4T24D04	85

Notes

- In California, 50 percent of all outlets in a systems panel cluster or benching cluster, for new construction, MUST be controlled outlets, even if there is no task lighting.
- Customers should plan on using circuits 2 and 3 for controlled circuits, and plan general load for all other items on circuits 1 and 4.
- If using 2 + 2 configuration, controlled circuits should be 1 and 2, and general load circuits on 4 and 5.
- Outlets must have the “controlled” symbol for identification purposes.

3	White	E-UN8W4USB03-W	283
4	White	E-UN8W4USB04-W	283

Notes

- USB Outlets bring charging options to panel power distribution systems.
- The USB Outlets provide convenient charging power access through dual ports on the face of the receptacle.
- The USB Outlets offer a total of 2 Amps between two USB charging ports.
- The USB Outlets are UL and FCC Part 15A approved.
- Can be used with multi-circuit electrical units.

DUPLEX OUTLET HOLE COVERS

Model Number	List
E-UNWC	30

Specify

- Color Selection for Hole Cover

Notes

- Duplex Outlet Hole Covers are supplied with each powered panel to cover unused duplex outlet locations (six).
- 24"W panels only include three duplex outlet hole covers.
- Order extra hole covers separately only when required.
- Can be used with multi-circuit electrical units.

CAT 6 Data Jack	E-HXJ6BK-SM	134
Hole Blank (10 PK)	E-SFBB10-SM	83

Notes

- Snap-In Data Housing Plate has six ports.
- Housing is black and snaps into standard AIS AO2 duplex outlet holes, which measure 1.86" x 3.012".
- RJ-45 jacks can be used in place of RJ-11 jacks.

HARDWIRE JUNCTION BOX

Model Number	List
E-HMJBCB	553

Specify

- Color Selection for Plate Covers

Notes

- Hardwire Junction Box allows standard, hardwired, single gang duplex outlets to be used in AO2 panels at each standard, modular duplex outlet location.
- Each outlet will require one junction box; however, outlets can be placed back to back on a spine, with a total of two outlets total per box.
- Do not include electrical connectors.
- Boxes are UL listed.
- Decora faced outlets cannot be used.
- Kit includes all hardware required to attach box to AO2 panel at duplex outlet location.
- Standard AO2 powered base covers are required.
- Order AO2 panels with Chicago base cover option.
- Boxes have standard 0.875" knockouts for electrical connectors.
- Junction boxes can be used with either 15 amp or 20 amp single gang outlets.

DOUBLE CHANNEL POWER/DATA POLE KIT

Notes

- Paint Selection for Cantilevers

- Standard Cantilevers provide cantilevered work-surface support from panel or wall track at either the left or right hand side of a worksurface.
- All worksurface support components fasten directly to worksurfaces with screws.
- Standard cantilevers may also be used as a center support.
- Specify cantilever that corresponds to worksurface depth.
- It is highly recommended that flat plates are specified in conjunction with support cantilevers to splice two worksurfaces together at the front edge.
- Painted black as standard, all other trim colors are Grade C upcharged.

Specify

Notes

- Paint Selection for Cantilevers

- Shared Cantilevers provide cantilevered support from panel or wall track at seam between two worksurfaces.
- All worksurface support components fasten directly to worksurfaces with screws.
- Specify cantilever that corresponds to worksurface depth.
- It is highly recommended that flat plates are specified in conjunction with support cantilevers to splice two worksurfaces together at the front edge.
- Painted black as standard, all other trim colors are Grade C upcharged.
