CREATION

Spec Seats is the most experienced and knowledgeable portable seating company in the institutional seating industry. We offer the best and most complete "All Events Seating Systems" featuring multi-purpose folding chairs, custom logo chairs, stools, storage carts and other related products. Our strong customer service relationships are designed by building satisfaction and loyalty that includes:

FUNCTIONALITY - DURABILITY - CUSTOMIZATION

Easy Maintenance - Long Term Warranty

Customer Tested Performance

Compliance with NFPA, ADA and Local Codes

User Friendly Set-up/Take-down and Storage Systems

Product Flexibility and Endless Options

Our engineers will customize a floor plan for your facility, allowing for maximum-capacity seating in keeping with the most current standards and regulations, and assist you in selecting the best portable-seating system for specific applications.

We enjoy challenges and support your various requirements / needs - constantly innovating - updating.

X-Frame

Basic Structure

Standard construction features

We use the most up to date roll forming machine with 24 sets of rollers (exclusive to Spec Seat's manufacturing process) to form a shape consisting of two (2) identical tubes with a flat center channel that provides the most consistent, uniform and accurately dimensioned part. This process adds the unique combination that balances rigidity-strength-flexibility to the finished roll formed metal part.

● Proper angle of seat to back

Has been ergonomically modified to assure the best posture.

● Ganging brackets

Designed for easier, straight alignment, security, and safety compliance.

● Double tube and channel

Structure is more durable than single tube. Pivot holes are always in channel, not in tube.

● Solid steel rivets

Are used at all pivot points for extra long life.

● X-type frame

The combination of strength and flexibility is far superior to Y-type designs; it is self-leveling and will absorb extreme shock.

● Leg frame support

Is maintained by a welded cross-brace with 2 "K" formed braces in the front and 2 embossed cross-braces in the rear providing extra strength and flexibility, while assisting with foot spacing.

● Spot welding

Use of stationary metal-to-metal contact points eliminates rattle and noise in comparison to riveted construction.

● Non-marring molded foot

Wears much longer than common crutch-type slip over foot. Foot-tip is molded over hair-pin/plated fork type design that cannot be removed without use of tools.

Standard Inter-bracket Ganging

Our standard brackets add .25" (.635cm) on-center dimension between chairs.

Wider Interbracket Ganging

Our wider brackets add a minimum of 1" (2.54cm) on-center dimensions between chairs.

Removable Spacer Brackets

Patented removable brackets easily connect to the standard chair brackets to allow wider on-center spacing between chairs for temporary seating requirements. The standard bracket converts an 18.25" (46cm) on-center chair to a 20" (50.8cm) on-center configuration. This allows your seating system greater flexibility for multi-purpose applications.

Arc (Radius) Brackets

We offer special ganging brackets to convert your seating configuration from standard/straight uniformed rows into a radius seating application.

LINKING SYSTEM www.specseats.com

Spec Seats provides various linking brackets for quick and easy interlocking.

There are various sizes to accommodate specific venues on-center dimension requirements.

They are designed to be non-obtrusive and for ease of set-up and take-down.

The unique feature is that these chairs will not un-lock when pushed forward or backward.

Portable – Durable – Comfortable – Elegant

Spec Seats

Decoration Panel Strips

Spec Seats patented molded snap-fit design for double tube and channel metal folding chairs. These changeable strips come in a variety of colors and can be customized to promote the image of your venue, company, team or event.

Slip Cover

We manufacture a variety of folding chair back covers that can be fitted and sewn or used as basic overlays. We have a wide selection of colors and materials to choose from. In addition, the covers can be personalized with logos, letters and/or numbers in various sizes.

Universal Armrest

These removable armrests with/without cup-holder are designed for extra comfort and easy attachment with chair ganging brackets. They can be attached for use on chair row ends, between linked chairs, or remain individual armchairs.

Seat Identification System

It provides a more consistent, easier handling solution to identify positions. They are made of special glue, leave no mark after peeling off, and are available in various sizes/shapes.

Metal Frame

Extreme Durability and Flexibility Combined! 19 Gauge steel roll-formed double tube and channel construction to withstand the constant set-up/tear-downs required for most venues.

"X" Frame-flex

The unique design feature allows the chair to self-level on most uneven surfaces and absorb extreme shock with the flexibility/durability to return to its original shape.

Molded Foot Glide

Each molded foot is manufactured over an extra protective smooth "U" shaped understructure for a secure friction fit inside the double tube on each chair leg. They are non-marking, extremely durable, allow for maximum floor surface contact, and are removable only with the use of tools.
