### All Terrain® Storage - All Models

General Information

#### STORAGE

#### Locks

Locks are standard on all All Terrain® storage units except for certain binder tower units (see binder tower general information). Locks are a high-security double-bit design. One KI break-away key and one standard key are included with each lock. Units are standard with random keys in a range of 200 different numbers. Note that All Terrain® units with multiple locks are keyed alike as standard. Specific key combinations are available at no additional charge. This information must be included with the order. Locks can be master keyed. Please see the accessories sections of this price book for order information on master keys, extractor (core-removal) keys, key blanks, cut keys, and core and key sets.

All locks have removable and interchangeable plugs. This feature provides for on-site custom keying. Units can be supplied with the lock plugs installed or shipped separately. To install or remove lock plugs, a unique key is required. This key is the extractor (core-removal) key and can be found in the storage accessories portions of this price book. Contact customer service to order lock accessories. To order plugs for field installation, specify "lock plugs not installed" on order. Order must specify total quantity of specific key numbered locks.

#### **Bases**

All Terrain® pedestals, binder towers, and low height storage units are offered in a choice of 3" dual-wheeled casters (3-1/2" with threaded insert) or 3" glides. These units may be specified with 4 casters (2 locking), 2 casters and 2 glides or 4 glides. Outrigger casters are offered on some models.

All Terrain® storage towers and AV towers are offered with larger 4" casters (4-1/2" with threaded insert) or with a plinth base. Plinth base features adjustable glides.

Casters are black with white wheel hubs and are nylon. Plinth base is steel.

Inboard casters or glides shall be mounted to cast aluminum plates.

The optional outriggers shall be cast aluminum. The outriggers are mounted to the bottom of the shell by four 1/4" - 20 machine screws fastened to the weldnuts. The outriggers on peds hold the caster stems at a 5° angle to the floor. This provides more true tracking of the ped when it is being pulled or pushed.

For similar models, inboard mounting plate, outriggers, casters and glides are completely interchangeable to adapt the level of mobility or aesthetic to changing needs. Changing the casters, glides, etc., will not affect the unit's height.

#### **Finishes**

All Terrain® storage units have standard detail and finish options, providing the designer with a wide variety of looks. Some of these options include paint colors, laminate fronts, pull designs and optional top styles. See below for information on paint and laminate choices and conditions. See the general information section for the particular storage type for design choices applicable to that product group.

#### **Standard Paint Finishes**

All KI storage products are chemically pre-pared prior to painting. This process enhances top coat bonding. Standard topcoat finishes are electrostatically applied powder and /or medium solids ALKYD baking enamel provide a stain- and scratch-resistant surface.

All inside and outside shell and drawer front surfaces are painted with the same specified paint color. Interior components and accessories are Black. Mechanical components are plated. Additional colors are standard and may be available where specifications call for painted surfaces.

#### **Special Paint Finishes**

All special colors, including other manufacturers' standard finishes, are available and subject to the following conditions: 1) Two steel color chips (min 3" x 5") are requested for color matching purposes. Paper samples are acceptable, however, a reasonable tolerance must be allowed when comparing the two variations. 2) All nonstandard colors are available at no additional charge (excluding hi-chromatic colors), but may be subject to extended lead times. Order will not be processed until color match is approved. Written confirmation must accompany order. 3) Textured paint finishes are available at a 5% upcharge. All other nonstandard textured colors follow the same procedure for color matching as listed above. 4) Special metallic and mica finishes are subject to an upcharge. The upcharge will be based on the particular color requested. All metallic or mica finishes must have a steel color chip sample provided. All metallic and mica finishes require a 3 week turn-around on samples and require an extended lead time on the actual order. Please be aware that metallic finishes can be inconsistent. The metal fleck can create patterns that are visible on large flat surfaces.

#### **Nonstock Plastic Laminates**

Additional laminates are available but may be subject to additional lead time. Other special laminates require an upcharge and additional lead time. Contact KI.

#### **Door Fronts**

All Terrain® AV towers, modular towers with cupboard modules, and binder towers configured with doors will have hinged doors. All Terrain® modular tower cupboard doors utilize 94° concealed hinges. The AV tower and binder tower doors utilize 270° "wrap-around" hinges.

Steel doors are constructed from outer door bodies and inner door liners. The door body is constructed from 20-gauge formed steel. A 3/4" flange is formed on all edges. The pull edge has an additional flange, formed inward to accept the liner. The liner is formed from 20-gauge steel and is spot-and MIG-welded to the door body. The steel door is specified with one of the four pull options (see below). The steel door is standard with a lock.

Laminate doors are constructed from .03 HPL laminate front and back and on the edges. Core material is particleboard. The laminate door is constructed to a finished thickness of 3/4". The laminate door is specified with one of the three pull options (see below). The laminate door does not accommodate the inset plastic pull. The laminate door is standard with a lock.

#### **Drawer Fronts**

All All Terrain® storage drawers (except binder tower file drawers) include an over-lapping drawer front (see binder tower specifications). Drawer fronts are screwmounted to the drawer body.

The steel-front option outer fronts are fabricated to accept the associated plastic or protruding pull options (see below). The front is 20-gauge formed steel with 3/4" flanges on all four sides. Behind the front is welded18-gauge steel mounting strips at both side ends. The laminate front option outer fronts are fabricated to accept the associated protruding pull options (see below). Laminate fronts are 3/4" thick with a particleboard core, .03 HPL laminate front and edge banding and phenolic backing sheet.

#### **Drawer and Door Pulls**

All All Terrain® storage units are available with steel fronts with inset molded plastic pulls, steel fronts or laminate fronts with a choice of protruding pulls.

The inset plastic pull is constructed from molded polycarbonate. It is colored KIGlacier white. The inset plastic pull is mounted to steel drawers only. The steel drawer has a relief formed into it to allow room for a hand behind the pull.

The protruding pulls are made from aluminum and attach to steel or laminate fronts by use of two machine screws. The metric pull is available in an aluminum finish. The bow tie pull is available in a nickel or alu-minum finish.

#### **Tops**

All All Terrain® storage units (except binder towers) are available in a seamless 20-gauge cold-rolled steel painted top. All storage units are available with a 3/4" thick non-steel directly attached top. Some All Terrain® storage units are available with a landing pad top.

#### **Non-Steel Tops**

Non-steel directly attached or landing pad tops are 3/4" thick. The laminate tops are constructed from .03 HPL laminate on top and a .03 melamine sheet backer on the bottom. 74P banding is applied to the edges. Core material is particleboard.

#### **Landing Pad Tops**

Landing pad tops are non-steel tops that are elevated above a standard steel top. Landing pads are useful for providing additional worksurfaces. The landing pad tops are fixed to the steel tops by four aluminum posts with steel through-bolts. The top surface of a landing pad is flat and smooth with no through-holes or any protrusions.

#### **Installation Information**

Complete instructions on the proper installation and use of KI files and storage are provided in each unit shipped.

When applicable, the installation instructions refer to the correct methods of leveling, ganging (lateral files only) and loading.

Counterbalance weights should be installed in all single free-standing lateral files. All Terrain® pedestals, binder towers, low height and modular tower units are shipped with factory-installed counter weights as required.

#### Field Reconfiguration

As needs change, All Terrain® storage units can readily be field-changed; however, this process should be undertaken by a qualified service technician.

# All Terrain® Storage - All Models

General Information

#### **PEDESTALS**

#### **General Information**

See All Terrain® General Storage Specifications located within this price book for specification information common to all All Terrain® storage products. All Terrain® pedestals are available in sizes and drawer combinations to suit any personal storage requirement. Most All Terrain® mobile pedestals are designed to fit below worksurfaces. Pedestals with landing pads are designed to supplement worksurface space. Pedestals with ourtriggers are specially designed to provide straight tracking when pushed or pulled but still allow unit movement in all directions. Pedestals with retractable handles provide the highest level of ergonomic mobility and allow pushing as well as pulling the unit.

#### Mobility

All Terrain® pedestals are available in 3 levels of mobility. All pedestals come standard with large 3" twin-wheel swiveling casters. The optional caster outriggers provide straight tracking of the units when pushed or pulled. The optional retractable handle provides the highest level of ergonomic mobility by allowing pushing or pulling of the unit from an ergonomically friendly position.

#### Height

Pedestal height is determined by the drawer configuration and top style. For units with steel tops, there are three unit heights of: 23-11/16", 26-3/4", and 29-13/16" (will not fit under a 29" high worksurface). An optional direct-mounted top adds 3/4" to these heights. Optional landing pad tops on the two shorter box sizes increase the unit height to 29" (to match worksurface height). An optional landing pad top on the largest box size increases unit height to 34-13/32".

#### Depth and Width

All pedestals are 15" wide and are available in two standard depths: 17-5/8" and 21-5/8". Optional outriggers add 3-23/32" to the overall width and depth.

#### **Basic Shell**

All Terrain® pedestal shell is constructed of components consisting of top, wrapper (sides and back), front and back interior uprights, and bottom reinforcements. The pedestal shell is spot-welded and MIG-welded together.

The top is 20-gauge cold-rolled steel (C.R.S) with 1-1/8" flanges on all four sides. The front face has an additional flange formed inward to provide additional strength. The front 1-1/8" flange has a prepunched hole approximately 2" from the right corner for the lock.

The wrapper is formed 20-gauge C.R.S. The wrapper is formed with 3/4" flanges along the 2 vertical sides. An additional flange is formed inward for additional strength and accepts the upright interior side panels. The upper edges are offset formed to accept the 1-1/8" top flange. The bottom edges are formed with a 3/4" flange to accept the uprights and bottom supports.

The bottom reinforcement is formed 20-gauge C.R.S. with 3/4" flanges on two sides. Two bottom 20-gauge reinforcements are welded inward along the front and back of the bottom of the pedestal shell. The bottom reinforcements are made with eight 1/4 - 20 threaded weldnuts that accept plate-mount or outrigger-mount casters.

The interior uprights are made from formed 20-gauge C.R.S. They are welded on each side of the pedestal at the front and back. The rear edge has 3/4" flange for strength. The front upright assembly is a spot-welded box frame design, in which both front upright members are securely welded to the top reinforcement and the bottom reinforcement to provide a strong, square frame. Each corner or joint has a unique bracing design punched from the parent material. This design provides for a double thickness at each corner for maximum strength.

#### Drawer

Drawers are available in 3" (pencil), 6" (box), 9" (box with hidden extending pencil drawer), 10-1/2" (compact file), and 12" (file) heights.

The drawer back is formed from 22-gauge prepainted C.R.S. with a 30° form along the top edge and is mechanically clenched to the body. Each file drawer has a Z-shaped component welded to the front liner to function as a support for one end of the hanging folders. The other end of the hanging folder is supported by locating the full-height divider in the appropriate slots.

The drawer body is formed from 22-gauge prepainted steel. The upper edges are formed to provide a smooth edge as well as providing full-length reinforcements. The box and file drawers are designed with four rows of slots to accept adjustable dividers. The drawer body is sized to allow for hanging of legal-sized All Terrain® soft bins by the use of dividers. The file drawer size allows for hanging of letter-sized hanging file folders and All Terrain® hard bins and fitting of All Terrain® letter-sized soft bins. A second set of punched holes allows mounting of the divider for hanging A4-sized hanging file folders.

NOTE: The 10-1/2" compact file drawer does not contain slots for drawer dividers, cannot hang legal files and cannot accept All Terrain® hard bins.

#### **Drawer Suspension**

The pencil and box drawers operate on a 3/4" travel, two-section slide assembly constructed from roll-formed precision sections, rolling on hardened steel ball bearings. The file drawers operate on a three-piece suspension assembly that allows for the drawer

body to extend clear of the front face of the pedestal. The roll-formed precision sections operate on hardened steel ball bearings. The suspension has a hold-in or retaining device to hold the drawer in a closed position. Slides are a decorative black finish.

#### Counterbalance

A counterbalance weight is installed in the pedestal to assure stability when the drawers are extended.

#### Interlock

All 6", 9", 10-1/2" and 12" pedestal drawers are equipped with a unique patented inter-lock safety system which permits only one drawer to be opened at a time. The system is designed to reduce the risk of a stand-alone unit tipping over. To minimize possible damage to the interlock system, activating cams restage. If during servicing or installing more than one opening is extended, these openings can be closed without damage to the interlock components.

#### **Binders**

Three-ring binder storage in pedestals is best accomplished by utilizing All Terrain® soft bins inside of the pedestal drawers.

#### Bins

All Terrain® hard bins hang in pedestal drawers or can rest on the shelves and landing pad/top. All Terrain® soft bins rest in pedestal drawers with and without hanger bars or can rest on the shelves and landing pad/top.

#### Finish

The pedestal shell, drawers, steel doors, out-riggers, and landing pad posts are thoroughly cleaned and subjected to a phosphate etching process before painting. A modified polyester backing enamel is applied to all metal surfaces and baked at 300° for 20 minutes to ensure a durable scratch-resistant finish.

#### Sizes

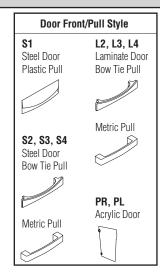

Height: 23-11/16", 24-7/16", 26-3/4" 27-1/2", 29", 29-13/16", 30-9/16", and 34-25-32"

Width: 15", 18-1/8"

Depth: 17-5/8", 21-5/8", 21-11/32", and 25-11/32"

#### Fahric

Fabric will be applied as swatched by the fabric manufacturer. Fabric that is required to be applied differently than is swatched will need a Special Cost Request written specifying the direction the fabric is to be applied. The posted standard lead time will apply to the Special Cost Request.

General Information

#### **BINDER TOWERS**

#### **General Information**

See All Terrain® General Storage Specifications located within this price book for specification information common to all All Terrain® storage products. All Terrain® binder towers are available in heights and drawer combinations to suit personal or shared storage requirements. Binder towers specified without drawers are optimized for book, binder or bin storage. These units include two adjustable shelves. Units may be specified with a single file drawer that can be used for letter files, legal files or bins, or for A4 files. Units with a file drawer include one fixed and one adjustable shelf and may also be specified with pullout pencil drawer.

All Terrain® binder towers may be specified with or without a door, on casters or glides with or without outriggers. The binder tower always includes a laminate either directly attached or as a raised landing pad. These tops can be specified as bowed front rectangular or as shaped.

#### Height

All Terrain® binder towers are available in 39-3/4" or 44-11/32" heights. Both heights provide a standing-height worksurface that invites collaboration. Specifying a landing pad, outriggers, casters or glides do not affect the unit height.

#### Depth and Width

All Åll Terrain® binder towers shells are 18"wide and 17" deep. A shaped top or outriggers add to the overall unit width and depth. Optional outriggers add 3-23/32" to the overall width and depth. Shaped tops add 2-1/2" to the depth and 4" to the width.

#### **Binder Tower Shell**

All Terrain® binder tower shells are constructed of components consisting of top, top reinforcements, bottom, wrapper (sides and back), upright interior side panels, and bottom reinforcements. The binder tower shell is spot-welded and MIG-welded together.

The top is 18-gauge cold-rolled steel (C.R.S.) with 3/4" flanges on all four sides. The front face has an additional flange formed inward to provide additional strength. Two top 20-gauge reinforcements are welded inward along each side of the top. The reinforcements are punched to allow mounting of the pencil drawer.

The wrapper is formed 20-gauge C.R.S. The wrapper is formed with 3/4" flanges along the two vertical sides. An additional flange is formed inward for additional strength and accepts the upright interior side panels. The upper edges are offset formed to accept the 3/4" top flange. The bottom edges are formed with a 3/4" flange to accept the binder tower bottom.

The bottom is formed 20-gauge C.R.S. with 3/4" flanges on all four sides. The front face

has an additional flange formed inward to provide additional strength. Two bottom 20-gauge reinforcements are welded inward along each side of the bottom. The bottom reinforcements are made with eight 1/4" - 20 threaded weldnuts that accept plate-mount or outrigger-mount casters.

The upright interior side panels are made from formed 20-gauge C.R.S. They fill up the interior left and right side of the binder tower. The front and the upright is formed to fit inside the channel form of the wrapper. The rear edge has a 3/4" flange for strength. The uprights are MIG-welded internally at each end, top and bottom. The welding provides a rugged shell design. The uprights are punched with 1" slots on a 1-inch increment pattern to hang the shelf supports. The uprights are also punched to mount the drawer suspensions.

#### **Acrylic Doors**

In addition to no door, steel door and laminate door options (see general storage specifications), All Terrain® binder towers are available with an acrylic door. The acrylic door is constructed from 1/4" thick frosted clear polycarbonate. The edges are finished with a rounded edge. The door's pull is machined into the door. Acrylic doors are reversible to change between right and left swinging. Acrylic doors do not include locks.

#### Drawer

Drawer fronts are fabricated from 20-gauge steel, are hemmed at the top, and have a 3/4" flange at the bottom for welding to the drawer body. The front is punched to receive a 1-1/2" diameter rubber grommet pull.

The drawer back is formed from 20-gauge C.R.S. and is hemmed along the top edge. The back is spot-welded to the drawer body.

The drawer body is formed from 20-gauge steel and is hemmed along the top edges. It is spot-welded to the drawer back and drawer front. The drawer body is sized to allow for hanging of legal-size hanging file folders and fitting of legal-size All Terrain® soft bins. Also, binder tower drawers do not lock. The sides of the drawer are punched to allow the mounting of hanging bars. The hanger bars allow for hanging of letter-sized hanging file folders and All Terrain® hard bins and fitting of All Terrain® letter-sized soft bins. A second set of punched holes allows mounting of the divider for hanging A4-sized hanging file folders.

The optional pencil drawer is a plastic drawer with multiple compartments for small items such as pens, paperclips, etc., and letter or A4-size paper.

#### Counterbalance

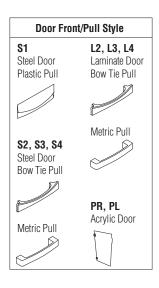

To ensure stability when the drawer is open, a counterbalance weight is factory-installed in binder towers specified with file drawer.

#### **Drawer Suspension**

The three-piece suspension assembly allows for the drawer body to extend. The roll-formed precision sections operate on hardened steel ball bearings. The suspension has a hold-in or retaining device to hold the drawer in a closed position.

#### **Binder Tower Shelf and Support**

Binder tower shelves are formed from 20-gauge C.R.S. with 3/4" flanges front and back. The front and back faces have an additional flange formed inward 3/4" and another small flange formed upwards to provide additional strength. The shelf support is formed from 20-gauge steel and supports the shelf along the full length of the left and right sides of the shelf. The shelves move up and down the interior of the binder tower in 1" increments.

General Information

### LOW HEIGHT STORAGE

#### **General Information**

All Terrain® low height storage units are available in sizes and drawer combinations to suit personal or group storage requirements. They are sized to tuck under worksurfaces or, with a landing pad option, to provide supplemental worksurfaces.

#### **Base Options**

Base options for low height storage units include exposed 75mm (3") wheeled casters or glides or a combination. With the combined caster/glide option, units can be positioned flush to walls/panels while still providing a more static look and function.

#### Height

All Terrain® low height storage unit height is determined by the drawer configuration and top style. For units with steel tops, there are two unit heights of 26-3/4" and 29-3/16" (will not fit under a 29" high worksurface). An optional direct-mounted top adds 3/4" to these heights. Optional landing pad tops on the shorter box size increases the unit height to 29" (to match the worksurface height). An optional landing pad top on the largest box size increases unit height to 34-13/32".

### Depth and Width

All All Terrain® low height storage units are 21-5/8" deep, and are available in two standard widths of 24" and 30".

### **Basic Shell**

All Terrain® low height storage unit shell is constructed of components consisting of top, wrapper (sides and back), front and back interior uprights, and bottom reinforcements. The unit shell is spot-welded and MIG welded together.

The wrapper is formed 20-gauge C.R.S. The wrapper is formed with 3/4" flanges along the two vertical sides. An additional flange is formed inward for additional strength and accepts the upright interior side panels. The upper edges are offset-formed to accept the 1-1/8" top flange. The bottom edges are formed with a 3/4" flange to accept the uprights and bottom.

The bottom reinforcement is formed 20-gauge C.R.S. with 3/4" flanges on two sides. Two bottom 20-gauge reinforcements are welded inward along the front and back of the bottom of the unit shell. The bottom reinforcements are made with eight 1/4" - 20 threaded weldnuts that accept plate-mount or outrigger-mount casters.

The interior uprights are made from formed 20-gauge C.R.S. They are welded on each side of the unit at the front and back. The rear edge has 3/4" flange for strength. The front upright assembly is a spot-welded boxframe design, in which both front upright members are securely welded to the top reinforcement and the bottom reinforcement to provide a strong, square frame. Each corner or joint has a unique bracing design

punched from the parent material. This design provides for a double thickness at each corner for maximum strength.

#### Drawer

Drawers are available in 10-1/2" (compact file) and 12" (file) heights. Fronts are screw mounted to the drawer body.

The drawer back is formed from 22-gauge pre-painted C.R.S. with a 30° form along the top edge and is mechanically clenched to the body.

Each file drawer has a Z-shaped component welded to the front liner to function as a support for one end of the hanging folders. The other end of the hanging folder is supported by locating the full-height divider in the appropriate slots.

The drawer body is formed from 22-gauge pre-painted steel. The upper edges are formed to provide a smooth edge as well as providing full-length reinforcements. The box and file drawers are designed with four rows of slots to accept adjustable dividers. The drawer body is sized to allow for hanging of legal-size hanging file folders and fitting of legal-size All Terrain® soft bins by the use of dividers. The file drawer size allows for hanging of letter-size hanging file folders and All Terrain® letter-size soft bins. A second set of punched holes allows mounting of the divider for hanging A4-size hanging file folders.

### **Drawer Suspension**

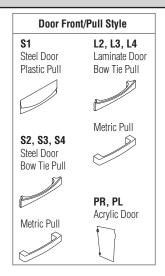

The file drawers operate on a three-piece suspension assembly. The roll-formed precision sections operate on hardened steel ball bearings. The suspension has a hold-in or retaining device to hold the drawer in a closed position.

### Counterbalance

A counterbalance weight is installed in low height storage units to assure stability when the drawers are extended.

### Interlock

All Terrain® low height storage unit drawers are equipped with a unique patented interlock safety system, which permits only one drawer to be opened at a time. The system is designed to reduce the risk of a standalone unit tipping over. To minimize possible damage to the interlock system, activating cams restage. If during servicing or installing more than one opening is extended, these openings can be closed without damage to the interlock components.

General Information

#### STORAGE TOWERS

### **General Information**

See All Terrain® General Storage Specifications located within this price book for specification information common to all All Terrain® storage products.

All Terrain® storage towers are available in sizes for drawer and other module type combinations to suit any personal, shared, or group storage requirement. Storage tower configurations range in heights from standing height 39" to tall 66" height. They are always 24" deep to stand next to worksurfaces without wasting the space behind. Storage towers come in 24" and 30" widths.

All Terrain® storage towers are modular in construction. In this way, a vast number of different configurations are available to perfectly suit users' needs. Modules are bolted together in the factory to provide a fully assembled configured unit.

All All Terrain® storage towers are built upon a base module and a drawer module. Other modules may be bolted above or beside the drawer module. There is always a top module bolted to the top of the tower. The types of modules that can be bolted above the drawer module are: bookcase modules (open to the side of the tower), cupboard modules (front facing with cupboard doors), and binder drawer modules (roll-out drawers with side access for binders or bins). Modules are bolted together using #10 bolts, nuts and sheet metal screws.

Base module options include a heavy-duty base that includes exposed large wheeled caster or a box (plinth) base that includes concealed leveling glides.

Top modules include choice of a 3/4" steel or laminate top. Also available for 39" and 44" towers are landing pad tops.

All modules include a lock, except for bookcase modules. Units with multiple locks are keved.

### **Laminate Fronts**

When laminate fronts are specified on storage towers, the laminate is applied to drawer fronts, cupboard doors and tie bars. Base modules, steel top modules (if specified) and tower sides and back are all painted. For storage towers with bookcase modules, a laminate front option is only available upon special request.

### Storage Tower Sizes:

All All Terrain® storage towers are 24" deep. Optional outriggers add 3-23/32" to the overall width and depth. Optional protruding pulls add 1-1/8" to the depth.

### WIDTHS

Storage towers come in 24" and 30" widths.

Optional caster or glide outriggers add 3-23/32" to the overall width and depth.

#### HEIGHTS

Available storage tower heights: Heights with tops at a standing height are 39' (39-3/4" actual), and 44" (44-11/32" actual). Other heights: 48" (48-15/16" actual), 54" (55-1/16" actual), and 66" (67-5/16" actual).

### Storage Tower Modules - Module Construction

All storage tower modules consist of a wrapper and reinforcement channels. Some modules also include flush liners.

#### Wrapper

All storage tower modules have a 20-gauge steel wrapper with 1" flanges on top and bottom edges for bolting together the modules. Wardrobe modules have an L-shaped wrapper that bolts to the top, bottom and side of adjacent modules. The back edge of the wrapper includes a 1" flange for bolting to the side of adjacent modules. All modules have a 3/4" channel formed in the front edge providing a seamless rigid form.

### Reinforcements

All storage tower modules have 18-gauge top hat channel reinforcement channels providing strength, rigidity and, where applicable, a firm structure for attachment of drawer slides. Drawer modules (including binder drawer modules) include two sets of reinforcement channels welded to the sides of the wrapper. Each channel set is constructed by welding three sections of channel into a U-shaped structure. This structural channel set is welded to the rapper with the bottom of the U-shaped section forming reinforcement across the top of the module. Bookcase and cupboard modules include two pairs of reinforcement channels welded across the top and bottom of the wrapper. Wardrobe modules have a pair of reinforcement channels across the top of the module. Additionally, there is a front flush filler welded to the front edge of the wrapper.

### Liners

Bookcase and cupboard modules include liners. Bookcase modules include 20-gauge flush liners welded to the wrapper along the bottom and sides. The sideliners provide a rigid box structure as well as providing shelving slots on 1/2" centers. 22-gauge top liners are screwed in place to finish bookcase. A 20-gauge top front filler finishes the top front of the cupboard modules and provides a secure point for locking

### **Drawer Modules**

All All Terrain® storage towers consist of a base module bolted to a drawer module. Drawer modules come in widths of 30" (30" wide towers only), 24" and 15" wide (24" wide towers with a wardrobe). All drawer modules have a 1-1/2" high lock bar above the set of drawers and usually have fullwidth drawers.

30" wide drawer modules can contain two vertical rows of 15" wide drawers. In this

configuration there are two independent locks in the full-width lock bar (one for each row of drawers). This is particularly useful for allowing a single unit to be shared by

The height of the drawer modules is dictated by the number and height of the drawers. All Terrain® storage tower drawers pull out toward the front of the unit. Drawer heights available are: 3" (pencil), 4-1/2" (box), 6" (box), 7-1/2" (box), 1-1/2" (file), and 12" (file) heights. Smaller drawers are always above larger drawers.

#### Binder Drawer Module

Binder drawer modules are 15" wide. They contain a single drawer with independent lock. One side of the drawer body is full height while the other has a drawer pan height of 4-1/2". This provides side access for convenient storage of books, binders and/or letter-sized bins. Binder drawers are not intended for file storage. (Use bins to efficiently store files.) Binder drawer modules are always positioned directly above a drawer module and next to either a bookcase, cupboard or wardrobe module.

#### Sizes

Height: 13.781", 15.31", 16.84" Width: 15" Depth: 24"

### Drawer Suspension

All All Terrain® storage tower drawers operate on a three-piece suspension assembly. The roll-formed precision sections operate on hardened steel ball bearings. The suspension has a hold-in or retaining device to hold the drawer in a closed position. Slides are a decorative black finish.

### Interlock

All drawers (except 3" pencil drawers) are equipped with a unique patented interlock safety system, which permits only one drawer to be opened at a time. The system is designed to reduce the risk of a stand-alone unit tipping over. Modules with side-by-side drawers have two independent interlock systems that allow unimpeded drawer access in shared tower situations. To minimize possible damage to the interlock system, activating cams restage. If during servicing or installing more than one opening is extended, these openings can be closed without damage to the interlock components

### **Bookcase Modules**

Bookcase modules always face the side of the tower. When facing this module from the tower side, the module measures 24" wide and 15" deep. Bookcase modules are perfect for storing books, binders, bins or other items that are frequently accessed. Clutter remains unseen since the opening faces the side. Bookcase modules are always mounted above a drawer module. When configured with a 26" or 29-3/32" lower drawer module, the bookcase height is slightly above a typical worksurface height. This makes the unit ideal for positioning at the

end of a worksurface.

Height: 13.781", 15.31", 16.84", 19.906", 21.438", 22.969", 35.219" Width: 24"

Depth: 15"

### **Cupboard Modules**

Cupboard modules are always front facing with one or more doors. They are always 24" deep. They may span the width of the unit or may be configured next to bookcase, binder drawer, or wardrobe modules.

#### Sizes

Height: 13.781", 15.31", 16.84", 19.906", 21.438", 22.969", 35.219" Width: 9", 15", 21", 24", 30"

Depth: 24"

### **Shelf and Supports**

The shelves for both bookcase and cupboard modules are formed from 20-gauge C.R.S. with 3/4" flanges front and back. The front and back faces have an additional flange formed inward 3/4" and another small flange formed upwards to provide additional strength. The shelf support is formed from 20-gauge steel and supports the shelf along the full length of the left and right sides of the shelf. The shelves move up and down the interior of the bookcases and cupboards in 1/2" increments.

### **Wardrobe Modules**

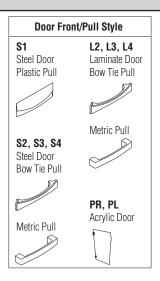

Wardrobe modules are 9" wide and include coat hanger hooks at the top. Wardrobe modules are holted to the base of the unit and to the side of two or more modules.

General Information

#### **AV TOWERS**

#### **General Information**

All Terrain® AV towers are available in one size with two configurations. They have the same size, general look, and finish options as the 66" high x 30" wide All Terrain® storage towers. Both configurations include a top module that is a special AV cupboard module. One configuration has an AV media drawer lower module, which is specially configured for AV media. The other configuration has an AV cupboard module similar to the top module. Reinforced shelves support AV equipment and include wire apertures. The AV cupboard modules include apertures with grommets between modules (in cupboard/cupboard option) and through the back for wire management and wraparound 270° hinges.

#### **Options**

AV towers have all of the options available for 66" All Terrain® storage towers.

#### Height, Depth and Width

All Terrain® AV towers are 67-11/32" high x 30" wide x 24" deep.

#### Basic Shell

All Terrain® AV tower unit is of modular construction and consists of top, cupboard and drawer modules on a base. The upper module is always a cupboard.

#### **Upper Cupboard/Lower Cupboard**

The module consists of a one-piece wrapper (sides, back and front face) with two structural upright frames and a welded-in bottom. In the upper module, both the bottom and back of the unit have two 1-1/2" diameter grommeted holes for wire management.

The wrapper is formed 20-gauge C.R.S. The wrapper is formed with 3/4" flanges along the two vertical sides. An additional flange is formed inwards for additional strength and accepts the upright interior side panels. The top and bottom edges are formed with a 1" flange with appropriate holes for fastening the top and lower module.

The upright components are 18-gauge channel-formed sections electrospot-welded together into a structural box frame. The frame consists of two vertical channels with lugging to accept the adjustable shelf, a top and bottom member. There are two frames: one at the front of the cabinet and one at the back

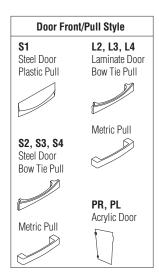

A 20-gauge bottom with 3/4" side, front and back flanges is welded to the wrappers.

#### Adjustable Shelf

The 20-gauge shelf has multiple return flanges front and back for superior strength. Notched side flanges slip into the lugging on the upright members of the case providing an integral shelf bracket. Two 18-gauge top hat channel sections are welded to the shelf stops short of the back of the case providing as space for wires to be routed.

#### **Drawer Unit**

The drawer module is identical in construction to the All Terrain® storage tower drawer modules. The drawer configuration is intended for AV media. The drawer combination includes a 4-1/2" drawer for media including VHS tapes and CD's, a 7-1/2" drawer for media including DVD's and a 12" drawer for training documents such as letter-sized files or binders (best when using hins)

#### **HOW TO ORDER**

Indicate the following information on order form:

- Quantity of each item.
   Model number, including options. See
   "How To Build a Model Number".
- 3. Any special service required.

Note: ullet The  $\square$  indicates that a choice is required.

- $\bullet$  The absence of the  $\square$  indicates that no choice is required.
- · Alpha-numeric characters in place of  $\hfill\Box$  indicate that no other alternatives are available.

#### HOW TO BUILD A MODEL NUMBER

- A Select basic model.
- BSelect unit color.

Refer to color addendum at ki.com or KI Fabrics & Finishes binder.
