Boston, MA

To whom it may concern,

In response to the sole provider of Q-Tel system interface requirement from UMMC, please find the following response to the 3 criteria requested:

LINK Medical IDK Software provides HL7 interfaces connectivity to and from Q-Tel System with HIS, EMR and PACS systems.

HL7 ADT and Order with Patient demographics for Cardiac Rehabilitation session is received by LINK Medical Interface where it is uniquely converted to Q-Tel system proprietary format for Cardiac Rehabilitation session, after session is concluded the session report is then process and convert back to HL7 Result standard format to be sent back to HIS, EMR or PACS system, this process is seamlessly integrated and is the only HL7 communication between Q-Tel system to other HL7 Systems.

The objective of using LINK Medical IDK for Q-Tel system is that LINK Medical Interface software is the only source of providing Q-Tel systems with Cardiac Rehabilitation Session orders, Patient Demographics and Session Results reporting to and from others HL7 systems, where LINK Medical IDK software was already been integrated with Q-Tel System to provide this functionality.

LINK Medical IDK software can only be purchased via Vendor of the system;
Please let me know if you need additional information.

Regards,

Chuong Nguyen
