AN INSIGHT INTO OUTSERTS

ALUMINUM OUTSERT signage
by Appenx is the perfect solution for any
interior application. From individual
offices.... to complex directories.... we
have the flexibility in design to enhance
any **CORPORATE** environment.

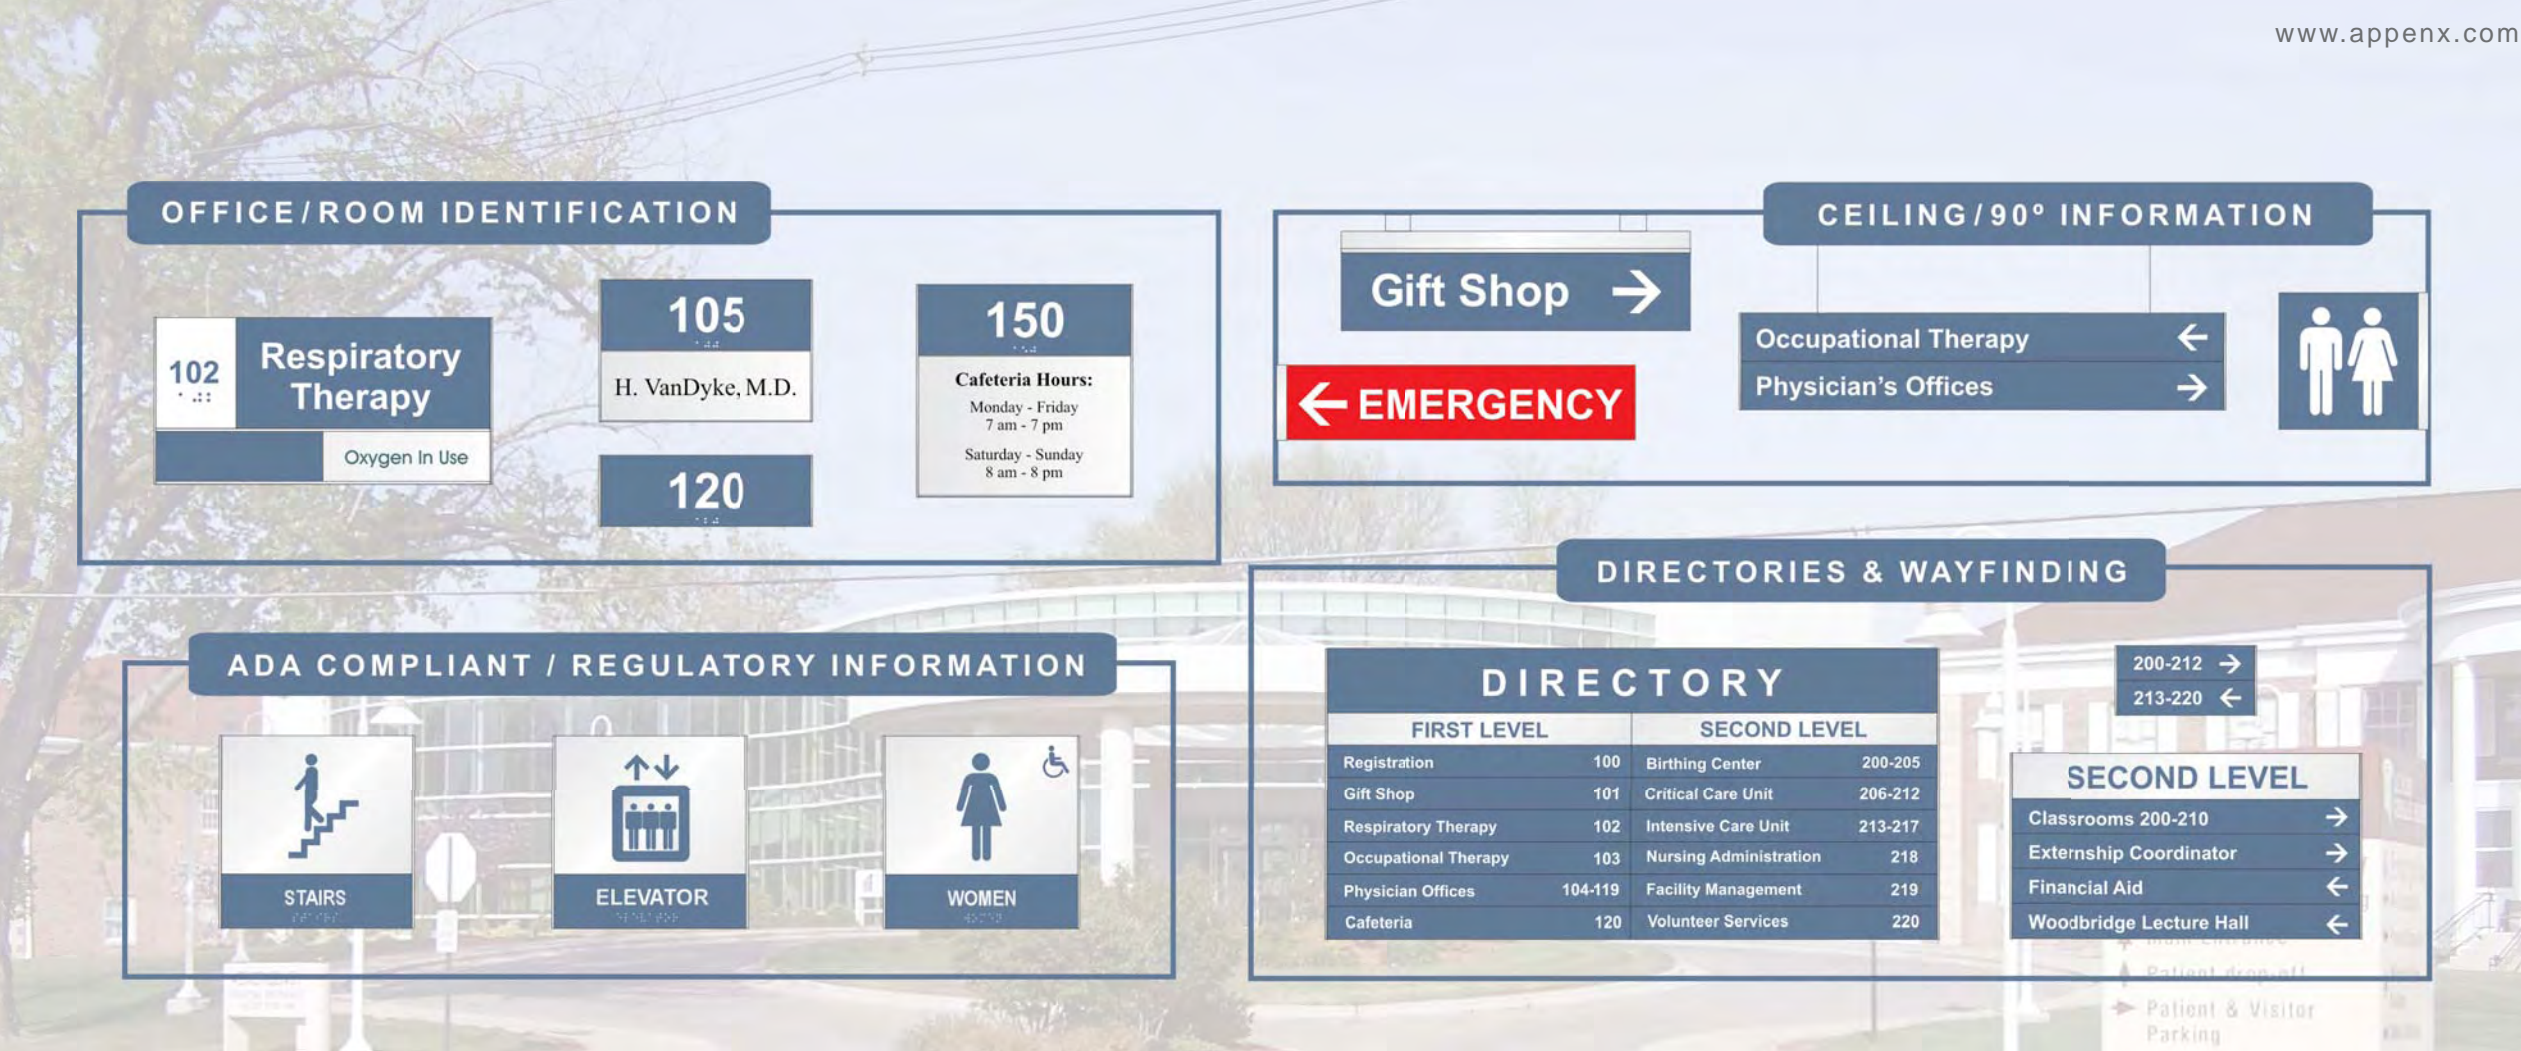

EDUCATIONAL environments
are another perfect fit for Appenx Outsert
signage. With a vibrant color palette and
options designed specifically for long wear
and tamper resistance... our signage
will ace the test.

We proudly guarantee it!

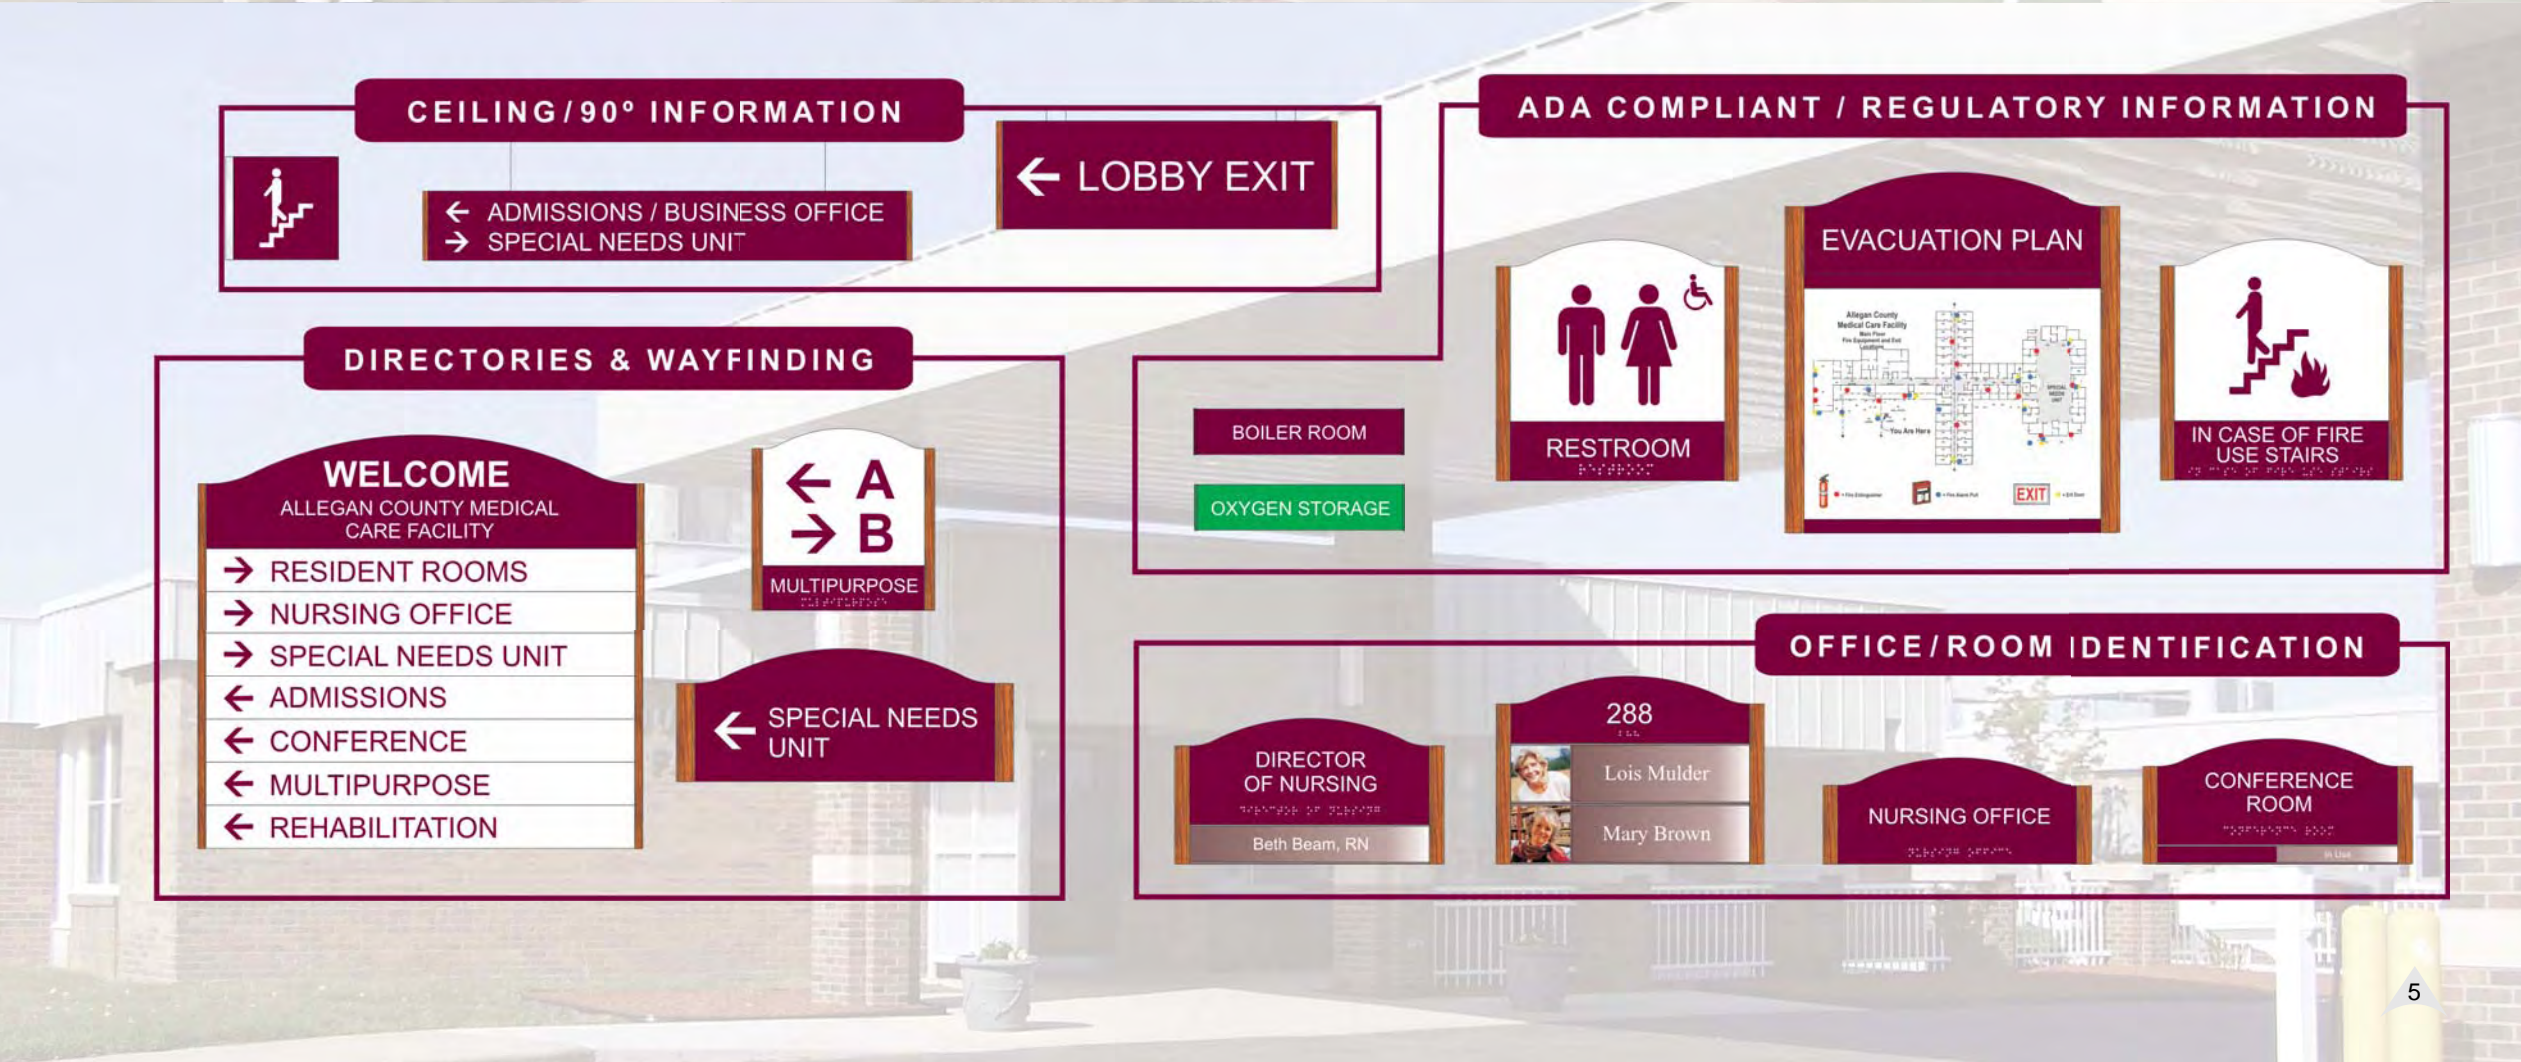

HEALTHCARE environments

require crisp, cleanly designed visual communication. Appenx understands that need and provides the best solutions on the market today. Designed with expandability in mind... our open-ended modules allow for seamless additions (above and below). Easy to maintain... and to clean... we're confident that our products will be a "painless" enhancement to your facility.

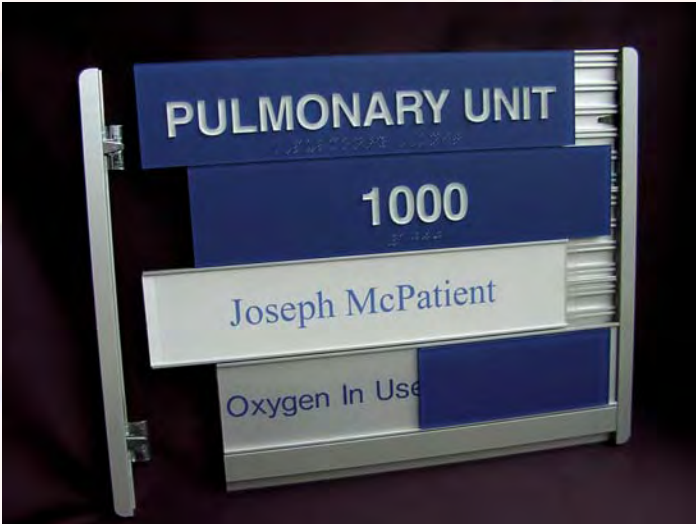

LONG-TERM MEDICAL CARE

environments are trending toward more "homey" atmospheres. Appenx has the finishes and materials to bring a softer and more residential feel to your facility... while maintaining our commitment to durability and simple upkeep.

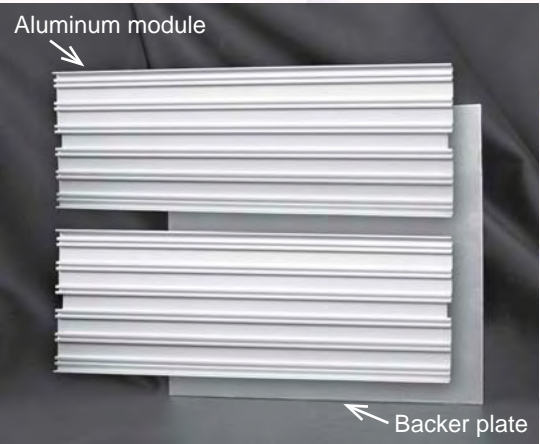

HOW IS AN OUTSERT SIGN BUILT?

The basic Outsert sign consists of:

- sturdy aluminum module backer assembly as the foundation of the sign
- an arrangement of acrylic and/or aluminum window message tiles that covers the face surface of the module assembly
- endcaps/sidekicks seal off the sides of the sign or in some cases the top of the sign

Standard sizes are offered, any sizes in between the sizes offered are available at the price of the next standard size. Modules are .050 thick aluminum extrusions. Heavy duty for larger signs yet is not too heavy for smaller signs. A combination of 1", 2" and 3" aluminum modules plus the backer plate holding the modules firmly together makes up the base construction of the sign. Please check with us for any size or configuration limitations.

Dramatically better than photopolymer signs, the color is protected since it's on the back side of the message tiles..... and any tactile tiles including embedded letters/numbers.

The fine matte surface of any acrylic tile is moisture resistant, won't show fingerprints and can be cleaned with normal cleaning agents.

The Braille beads are perfectly round and clear.

Tactile tiles have an extended warranty.

Our products and processes are "green" environmentally friendly.

OPEN ENDED SIGN DESIGN

Seamless additions above or below the original sign can be installed at any later time (standard endcaps or square corner side kicks only)

SO, WHAT ARE THE ADVANTAGES OF AN OUTSERT SIGN?

The top and bottom edges of a sign are sealed off from dust and dirt for ease of cleaning.

LOCKING END CAPS (optional)

Endcaps cannot be removed or dislodged without our specially designed tool. Ideal for public areas to prevent tampering and yet facilitate message maintenance. See page 18 and 19 for endcap options.

OPEN ENDED MESSAGE TILE DESIGN

Message tiles can extend beyond the module backer assembly in any direction. This helps accommodate any designs that extend "outside the box"

WARRANTY

Appenx provides a "life-of-the-facility" warranty on all tactile tiles. Please see our product manual or visit www.appenx.com for further details.

WHERE DO YOU START?

SINGLE or DOUBLE-SIDED SIGN?

A **SINGLE-SIDED** application would be primarily for private offices, directories, room identification... pretty much any type of sign that would be mounted directly to the wall.

A **DOUBLE-SIDED** sign is necessary in ceiling or 90° applications where the message will need to be viewed from more than one direction.

ACRYLIC and / or WINDOW TILES?

An **ACRYLIC** tile would be appropriate in situations where the message will not be changing frequently.

A **WINDOW** tile is perfect in situations where the message changes frequently... the window tile accepts paper inserts or the non-glare lens can be lettered on the back side.

SLIDE-IN or SNAP-IN TILES?

SLIDE-IN tiles (standard) are perfect for most signs... and are simple to replace when message changes or tile configuration changes are necessary.

SNAP-IN tiles (optional) are the ideal solution for tamper-resistance and for areas where access to slide-in tiles may be limited.

Tiles can be removed by using our snap-out tool.

DO YOU NEED A SPECIAL TILE?

These tiles replace acrylic tiles associated with our standard single and double-faced signs or are add-on features for the face surface of the sign. There is an up-charge for each of the options.

TACTILE TILE (TACTILE)

- 1/32" high embedded letters/numbers
- Perfectly round grade 2 Braille dots
- Color on back side of tile and letters/numbers
- Tiles have fine matte surface that won't show fingerprints
- Extended warranty
- Can be cleaned with normal cleaning agents
- Standard slide-in or optional snap-in

SECOND SURFACE TILE (SECSURF)

- Vinyl letters on the back side of a non-glare tile
 - Color on back side of tile
- Non-glare finish that doesn't distort the image
- Can be cleaned with normal cleaning agents
 - Standard slide-in or optional snap-in

SECOND SURFACE INSERT (SECINST)

- Vinyl letters on the back side of an insert lens mounted in an aluminum carrier
- Color on back side of lens
- Matte finish that doesn't distort the image
- Can be cleaned with normal cleaning agents
- Standard slide-in or optional snap-in

DIMENSIONAL TILE (DIMNLTR)

- 1/32" high embedded letters/numbers
- Color on back side of tile and letters/numbers
- Tiles have fine matte surface that won't show fingerprints
 - Extended warranty
- Can be cleaned with normal cleaning agents
 - Standard slide-in or optional snap-in

SUBSURFACE TILE (SUBSURF)

- A superior, cost effective alternative to silkscreening
 - Photo image fused to the backside of a tile
- Non-glare finish that doesn't distort the image
- Can be cleaned with normal cleaning agents
 - Standard slide-in or optional snap-in

TACKABLE TILE (PINTILE)

- Self-healing surface that accepts push pins and thumb tacks
- Finish washable with a damp cloth
- Resists cracking, drying or peeling
- Offered in eight colors

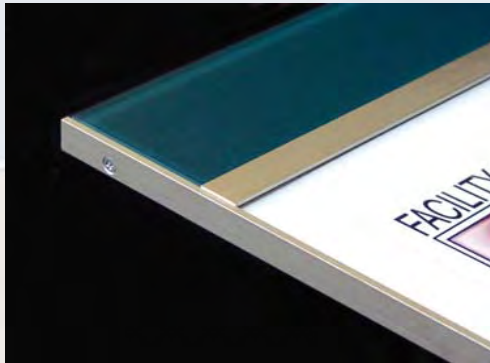

MOSAIC TILE (MOSTILE)

- Colored overlaid pieces of acrylic that form the face surface of the tile
- Can be cleaned with normal cleaning agents
- Standard slide-in or optional snap-in

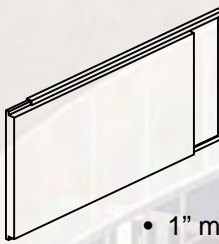

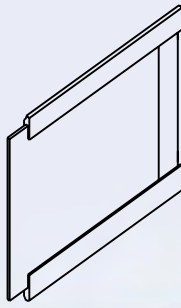

SPECIAL INSERT OR SLIDING TILE?

These tiles replace acrylic tiles associated with our standard single and double-faced signs or are add-on features for the face surface of the sign. There is an up-charge for each of the options.

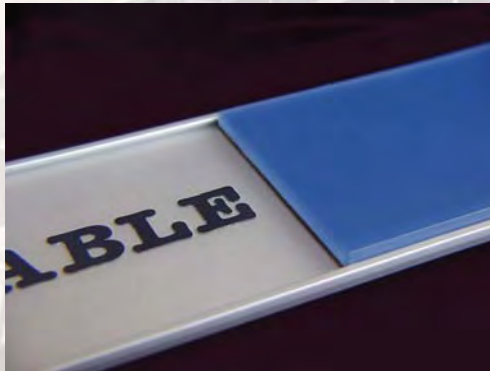

HIGH PROFILE INSERT TILE (HPITILE)

- 4" minimum window viewing height
- Sizes offered in 1/2" increments
- 1/16" non-glare lens
- 1/2" reveal at the top and the bottom (add 1" to view height)
- Paper insert or lettering on the back surface of the lens
- Can be cleaned with normal cleaning agents
- Slide-in only

LOW PROFILE INSERT TILE (LPITILE)

- Paper insert or lettering on back surface of lens
 - 1/16" non-glare lens or 1/4" simulated glass lens
 - 3/32" reveal at the top and the bottom
- 1" minimum height; 12" maximum height - 1/16" non-glare lens
- 1" minimum height; 18" maximum height - 1/4" simulated glass
- Can be cleaned with normal cleaning agents
- Slide-in only

SLIDING TILE (WS)

- Sold as accessory to any window sign
- 1/8" thick sliding acrylic tile
- Normally 1/2 the width of the window tile

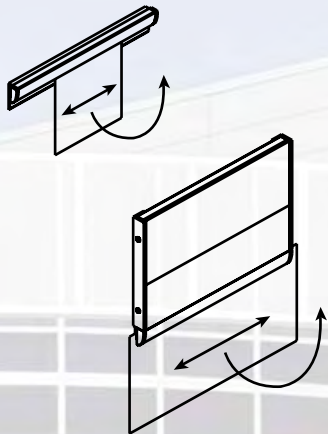

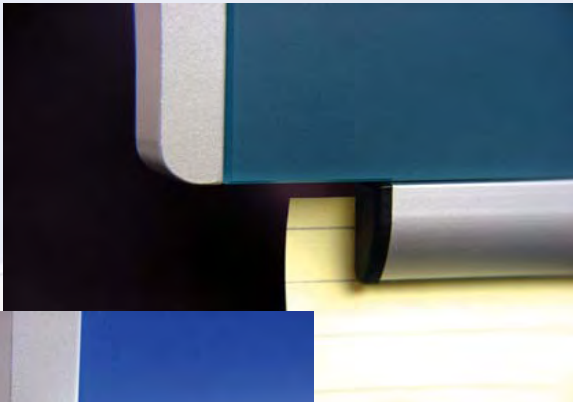

A sliding tile is an ideal spot to add your company logo. Like the Subsurface and Second Surface tiles the image is protected on the back side of a non-glare face surface.

PAPER BAR OR ACCENT TILE?

PAPERBAR (PPB)

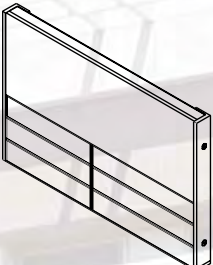

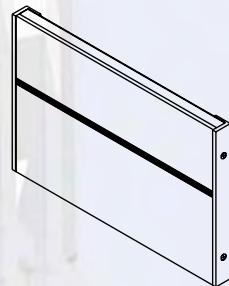

(sold separately or factory installed as the bottom tile of a sign)

Endcaps of the paper bar are the same thickness as the standard endcaps for the sign. Paper Bar can be the same width as the sign or smaller.

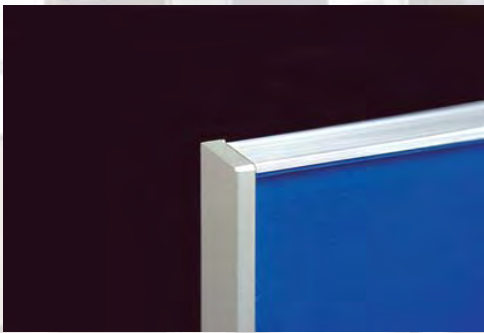

ACCENT STRIP (ACCSTRIP)

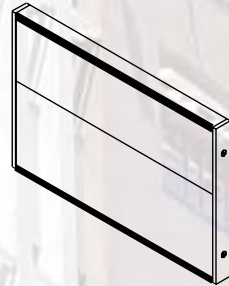

Horizontal strips are 1/8" thick, offered in any trim color and can be positioned between any row of tiles extending from the left side to the right side. (Adds 1/8" to the height of the sign and the endcaps / sidekicks.)

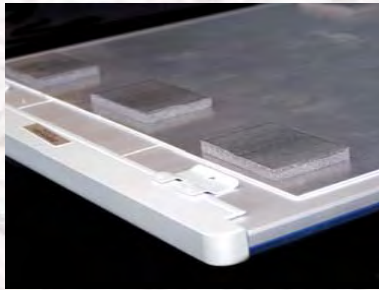

Vertical strips are 1/16" thick. If more than one is specified for a sign the tiles must snap in. Vertical strips are normally used as separators between window tiles.

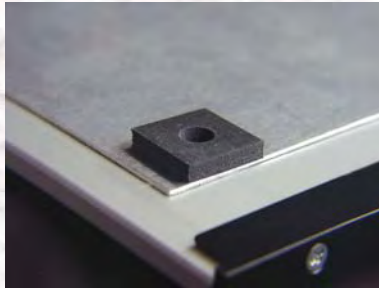

Horizontal strips (top & bottom) are a 1/16" thick provides a visual and functional edge closure to the sign. Primarily intended for snap-in message tiles. These strips are also offered in 1/8" thick visual edge to complement our standard endcaps for a constant frame look on all four sides of the sign.

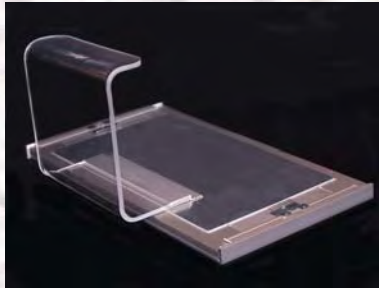

WHAT TYPE OF MOUNT?

DOUBLE BACK TAPE (A)
Aggressive double-back tape applied to the backer plate.

SCREW (S)
Ideal for larger signs. Equipped with hard rubber spacer-grommet around screw holes on back side protects the wall and provides equal pressure around screws. Screw heads are hidden behind the message tiles.

PANEL FACE BRACKET (P)
1/8" clear, over panel, (state panel thickness or ref: panel brackets in spec book)
Bracket slides into metal clip on the back.
(Also available in under top cap configuration).

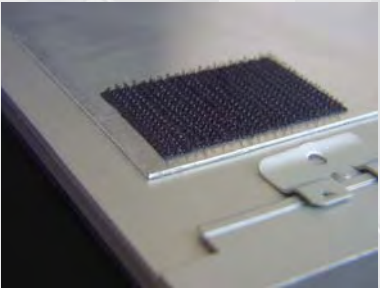

PIN (E)
includes "pin mounting tool".
See installation instruction on our website.
The "Flex Pin" allows the pin's to easily start into the fabric and also allows the sign to lay flat against the mounting surface.

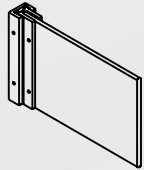

GLASS (G)
Aggressive double-back tape applied to the sign backer plate. Includes mask for the back side of the glass.

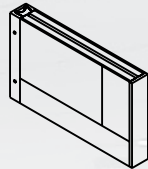

MAGNETIC (M)
Powerfull neodymium magnets will hold sign in place even with fabric between the metal and the sign.

VELCRO (V)
Industrial strength velcro hook applied to module back... excellent solution for panels with a weave fabric.

90° WALL PROJECTION (WG Series)
For displaying a **single static** message on both sides of the sign.

90° WALL PROJECTION (Y & Z Series)
For displaying multiple changeable messages on both sides of the sign.

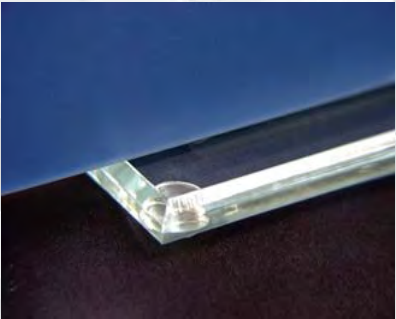

DESK MOUNT (D)
Clear acrylic desk bracket slides into metal clip on back side of aluminum module for interchangeability with panel brackets

FLOOR STAND (R) (F)
Available in 2 configurations, vertical or 30° (shown) applications... sturdy aluminum tube construction... see Appenx product manual for specifics.

DISPLAY MOUNT (D)
Available as free-standing or with double-back tape or magnets... an ideal solution for countertops, panel systems with flat top caps, etc.

TRIANGULAR (A3000/A3500)
Offered in any combination of acrylic and window tiles. Magnetic endcaps for easy message maintenance

HOW ABOUT CEILING MOUNTING?

STATIC MESSAGE OR MULTI-MESSAGE CHANGEABLE SIGN?

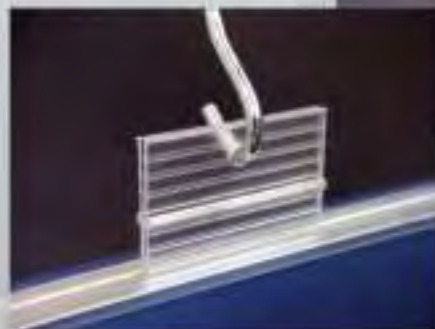

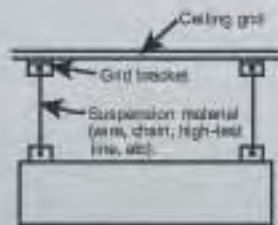

GRID MOUNT (Y)

Clear 3" wide plastic brackets are installed on the suspension grid and slide in the track on the top of the sign. Bracket allows sign to be spaced at either 1/2" or 1" from the ceiling.

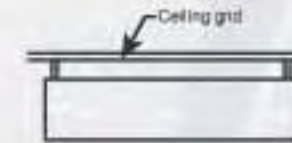

GRID MOUNT (W)

Clear plastic grid brackets are installed on each side of the suspension grid. Additional sign brackets slide into the track in the top of the sign. Suspension material not provided.

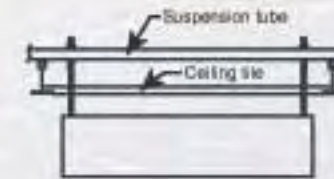

ROD MOUNT (C)

1/2" Aluminum tube attaches to the ceiling grid with a scissor grid clip. Offered in 3", 6", 12", 18" and 24" heights. Rod turns to lock grid clip in place.

BOLT MOUNT (B)

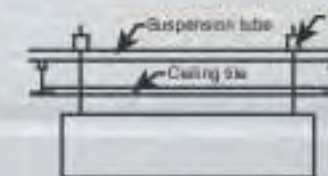

"L" bolts that extend through the suspension tube that rests on top of the suspended ceiling grid. Suspension tube ordered separately. Screw endcaps and sidekicks only.

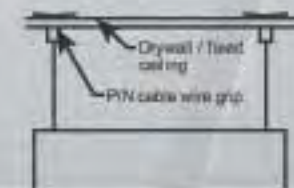

WIRE MOUNT (Z)

1/16" galvanized cable loops through top of sign. Cable is clamped in top wire trough with set screws.

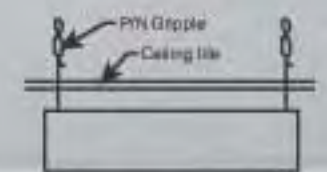

1/16" galvanized cable threads through the suspension tube that rests on top of the suspended grid and secured with set-screw barrows.

2-part, screw-together cable fitting. One half attaches to ceiling with a wing screw and the other half is staked to the wire. Assemble by screwing together.

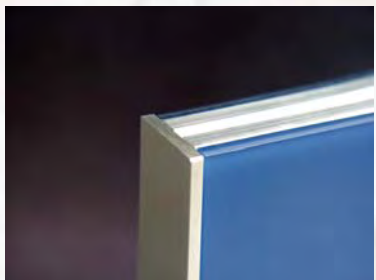

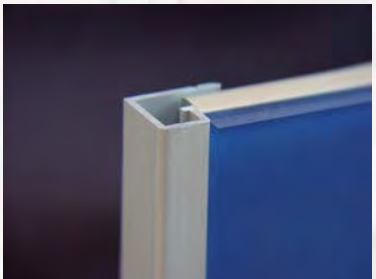

20 feet of 1/16" galvanized cable loops through the track in the top of the sign and is secured in the ceiling with wire clamping "Gripplies".

ENDCAPS or SIDEKICKS?

THIN-STYLE [SINGLE FACE] (THN)
Thin-style endcaps are included in the price of an Outsert sign. (specified separately).
Available with a permanent (snap-in tiles), screw, clip-on or locking clip attachment.

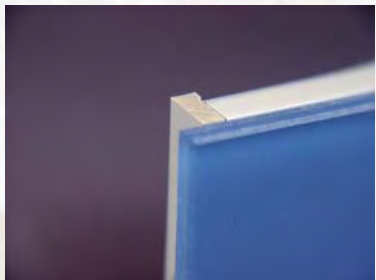

STANDARD [DOUBLE FACE] (SDD)
Standard endcaps are included in the price of an Outsert sign. (specified separately)
Available with a screw-on attachment for SLIDE-IN TILES or permanent attachment for SNAP-IN TILES.

SPECIALTY ENDCAPS [SINGLE FACE]

SLIDING LENS (SLN)
The sliding lens option is a combination of standard and flush endcaps that allows an open end for the lens only to slide out for ease of use.

FLUSH (SFL)
Flush endcaps allow the message tile to extend beyond the backer assembly on either or both sides.

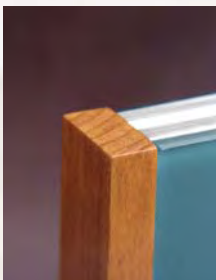

FACING (SFC)
The facing end cap provides a 7/16" decorative trim on either or both sides of a sign and can be used in combination with the standard or flush endcaps .

BASIC SIDEKICKS

RADIUS [SINGLE FACE] (SAR)
Radius sidekicks are available in aluminum or wood with a permanent (snap-in tiles), screw, clip-on or locking clip attachment.

RADIUS (SDR) SQUARE (SDS) [DOUBLE FACE]
For snap-in tiles with permanent attachment. Available in aluminum or wood.

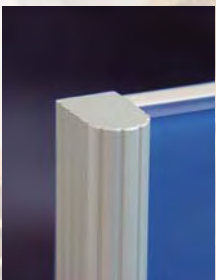

SQUARE [SINGLE FACE] (SAS)
Square sidekicks are available in aluminum or wood with a permanent (snap-in tiles), screw, clip-on or locking clip attachment.

SQUARE (SDS) RADIUS (SDR) [DOUBLE FACE]
For slide-in tiles with permanent attachment. Available in aluminum or wood.

ARCHITECTURAL SIDEKICKS [SINGLE FACE]

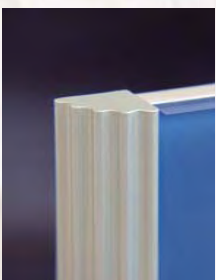

These sidekicks are offered to emulate architectural features of an environment. Available with a permanent, clip-on or locking clip attachment.

BULLNOSE (BUL)
Aluminum only

RIB (RIB)
Aluminum only

QUARTER-RIB (QTR)
Aluminum only

GRADUATED (GRD)
Aluminum only

BEVEL (BVL)
Aluminum only

FRAME (FRM)
Wood only

Please note: these colors are approximations of the paint finishes that Appenx offers and are intended only as a starting point in your design process. Please contact your Appenx representative for acrylic samples prior to making your final color decisions.

CUSTOM PAINT MATCHING

Need to match a specific paint or Pantone color? No problem. For a one-time fee, we'll match any color... and keep it in our inventory.

LAMINATE AND MARKER BOARD OPTIONS

Laminates are an excellent way to tie signage in with the rest of your interior decor. Appenx can add accent tiles in the laminate finish of your choice.

Marker board is available for message tiles... or for an entire sign. Refer to the Appenx product manual for more information.

SURFACE-APPLIED RAISED LETTERING

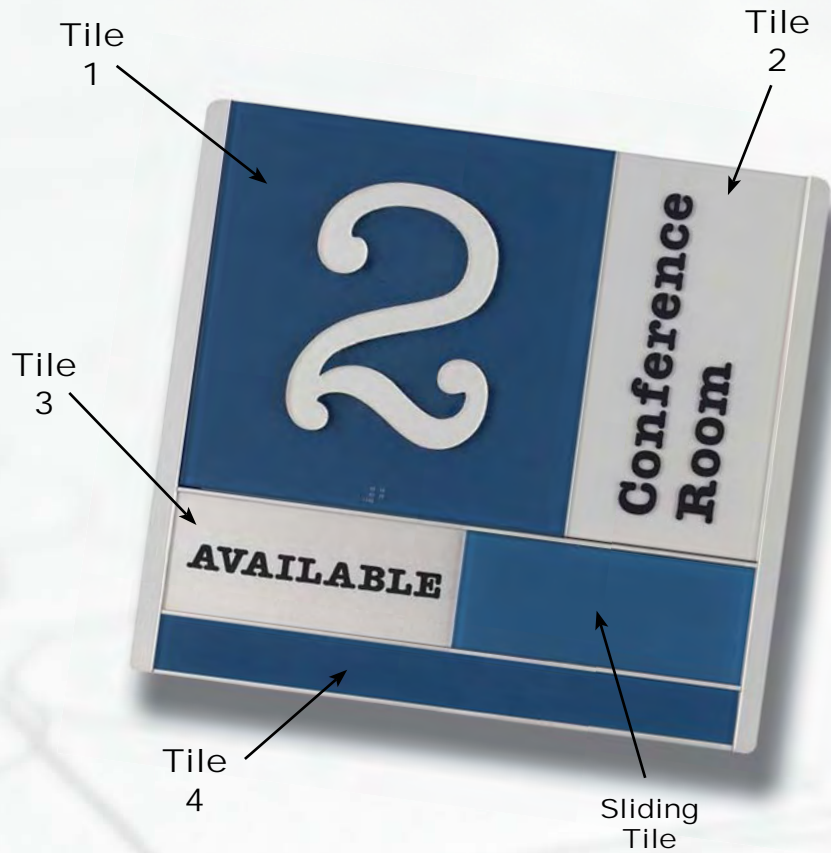

(AO494.400-LA)

Surface applied raised lettering, numbering and/or symbols are available in all of our acrylic finished and at thicknesses of 1/16" or 1/8".
