

A very versatile option for workstations!

The Outsert 2" x 9" window sign is our best, basic sign. At 3/8" thick it hugs the panel/wall with very little projection. The anodized, etched silver finish always looks fresh and clean and the name inserts can be changed quickly and easily.

There are two insert options:

- a printed paper insert that slides behind the lens; cutting templates can be found on our website to print or download
- vinyl copy adhered to either the front or backside of the lens

Both options have their advantages and disadvantages. Using paper inserts and our website templates is an ideal way of maintaining sign messages in-house but paper (and card stock) can absorb moisture and "billow" behind the lens. The vinyl copy applied to the front or backside of the lens inserts looks crisp and clean against the background of the sign but generally necessitates outsourcing back to Appenx or a local sign shop for replacement name inserts. Appenx can also provide blank lens inserts quickly and inexpensively.

We offer a variety of clip-on end caps in a multitude of colors to accent the look of the sign, some of these are shown above.

Finally, the mounting options are well thought out, simple to install and designed to meet or exceed your expectations. Installation instructions can be found on our website.

Most popular finish :

Silver, etched and anodized

Most Popular Size:

2" X 9"

Most Popular End Cap:

Standard End Cap
in Black or Silver

Message:

One or two lines of copy
