# Traditional Coat and Pants

Full protection and exceptional durability in a traditional design

## Traditional Coat Delivers Performance and Value

The Janesville® Traditional Coat incorporates stress-reducing features, solid thermal protection and long wear life in a cost-effective package.

The coat features bellows underarm construction to prevent hem rise and deliver a superior fit, 4" Kevlar®/Spandex® wristlets, a comfortable 3" contoured collar, 3" Hook and dee storm flap closure with a FR Velcro® coat closure and leather reinforcements on cuffs, shoulders and elbows for added wear life. Plus, the liner system has an inspection opening to enable a complete liner inspection without opening the hem of the coat liner.

The coat is available in 35" or 38" lengths for males and 32" or 35" lengths for females.

## Traditional Pants

The Traditional Pants also have a traditional ProjectFIRES waist that combines with the coat to ensure a secure overlap with no thermal gaps. Water-resistant FR Lite-N-Dri™ closed-cell cushioning is placed in the knees between the moisture barrier and thermal liner to further enhance thermal protections.

The pants are designed with bellows knees that won't bind or pull when you're crawling, climbing, bending or kneeling. Standard leather reinforced knees, cuffs and kick shields give you longer wear life. Plus, the liner system has an inspection opening to enable a complete liner inspection without opening the hem of the liner.
