Re: E-III™ Fire Training Fluid.

Dear Laura,

Chevron Phillips Chemical Company LLC is the sole manufacturer of E-III™ Fire Training Fluid. E-III™ is a proprietary product that is design to be more environmentally friendly with lower airborne emissions while still simulating a realistic fire for training compared to other hydrocarbons like diesel or gasoline. When burned in training applications, this product accurately simulates challenging aircraft, marine and refinery fires resulting from petroleum-based liquid hydrocarbons. Using E-III™ as your fire training fluid will emit less particulate matter and VOCs than diesel/gasoline blends and higher burn temperatures which support better combustion to CO₂. E-III™ is expected to emit much lower amounts of pollutants than fuels commonly used in live fire training because of their high purity. Thanks for working with Chevron Phillips, please feel free to contact me with any further questions about E-III™.

Best Regards,
