FOOTPRINT® WORKSURFACES & SUPPORT

Overview

Planning

Statement of Line	➤See page FW.2
Planning	FW.8
Pricing	FW.23
Surface Materials	FW.96

Worksurfaces can be panel mounted, wall mounted, Traxx mounted, or used in freestanding applications. Two worksurface thicknesses are available: 13/16" and 19/16".
Note: TFL tops are 1 1/8".

Worksurfaces have a solid core with a thermally fused laminate (TFL), high-pressure laminate (HPL), wood, or 3D laminate surface. 3D laminate worksurfaces feature a protective polymer layer that is heat formed over an MDF core.

Traxx brackets attach worksurface to bottom Traxx in Traxx-mounted applications.

Xsite Traxx-mounted worksurfaces allow for flexible horizontal positioning which provides exceptional off-modular capabilities.

Additional support can be provided by mid-supports, cantilevers, pedestals, column legs, and support panels.

Cetra panels feature slots to allow worksurfaces to be mounted at any height in 1" increments.

Corner and end supports are available to create freestanding modular casegoods.

Freestanding applications can be created by combining undersurface storage and modesty panels.

Wall-mount worksurface brackets allow worksurfaces to be connected directly to the wall without using Traxx.

13/16" Rim Profiles:

Softened Vinyl (P) Wood Softened Edge (F) Sloped Edge (S)

Softened vinyl rim is available on TFL and HPL worksurfaces only. The wood softened rim is available on laminate or wood worksurfaces. Sloped rim is available on 3D laminate worksurfaces only.

19/16" Rim Profiles:

Self Edge (J) Vinyl (P) Waterfall (K)

Wood Softened (F) Wood Reed (W)

Wood Scalloped (X) Wood Transitional (E)

Self edge, vinyl, and waterfall rim profiles are available on laminate worksurfaces only. Wood softened, reed, scalloped, and transitional rim profiles are available on laminate or wood worksurfaces.
IMPORTANT: All rim profiles are not available on all worksurface shapes.
➤See pricing pages.

FOOTPRINT® WORKSURFACES & SUPPORT

Worksurfaces

Planning

Statement of Line	➤See page FW.2
Planning	FW.8
Pricing	FW.23
Surface Materials	FW.96

Details

Two worksurface thicknesses are available: 1³/₁₆" and 1⁹/₁₆".

IMPORTANT: While the 1³/₁₆" and 1⁹/₁₆" worksurfaces are offered in the same materials, they are not interchangeable and cannot be used next to each other.

Wire manager profile worksurfaces have a flexible rubber trough that allows cords and cables to be routed along the back edge of the worksurface.

Tables are ideal for private offices and team work areas. Two table top thicknesses are available—1³/₁₆" and 1⁹/₁₆"—to complement the worksurface offering.

Cylinder and half-cylinder bases are available for use with table tops. Table support bases include an anti-tip weight.

Surface Materials

Worksurfaces

- 3D laminate
- Thermally fused laminate (TFL)
- High-pressure laminate (HPL)
- Wood

Rims

- Sloped on 3D laminate worksurface
- Vinyl on laminate (HPL & TFL) worksurface
- Wood on laminate (HPL) or wood worksurface
- Laminate (HPL) on 1⁹/₁₆" laminate worksurface with self edge or waterfall rim

Wire Manager

- Vinyl, specified to coordinate with worksurface

Connections

When using straight worksurfaces with sloped rims perpendicular to each other, there will be a valley where the slopes meet. It is recommended that extended worksurfaces be specified where possible to eliminate the valley between surfaces.

Worksurfaces can be scribed on site to conform to oblique angles, irregular column placement, and historical preservation guidelines.

Planning Factors

Standard grain direction for wood, woodgrain laminate, and woodgrain 3D laminate worksurfaces runs the length of the worksurface. However, depending on the worksurface shape and the material, the direction can vary.

➤See pricing pages for grain direction on specific worksurface models.

Note: Special attention should be given to wood grain direction when specifying a corner worksurface in a U-configuration. If a different grain direction other than the standard is required, worksurfaces must be custom quoted.

Custom modifications can be specified using an electronic specification tool for select models without running through as a special order. These include factory-installed grommets, additional wire managers, rims, or mitering. Special dimensions are available on straight worksurfaces by specifying the next larger standard model and selecting the special cut down dimension option. Upcharges apply; not available on Kwik Office models.

Note: Special dimensions on worksurface shapes other than straight must be custom quoted.

Note: Special dimensions on worksurface shapes other than straight must be custom quoted.

Related Products

Brackets are available to attach worksurfaces to all Kimball panel systems and adjacent worksurfaces.

➤See pages FW.81–.

Support components are available to make worksurfaces freestanding.

➤See pages FW.85–FW.95.

Accessories, including center drawer and keyboard trays, are available to add functionality to the work area.

➤See the Perks section in the *Kimball Accessory Solutions Price List*.

Rim Options:

➤See appropriate pricing page for available rim options.

Wire Manager

Single Rim

Double Rim

Wire manager option has the selected rim detail on the front edge and a wire manager on the back edge. Side edges are finished to match the top surface.

Exception: Sides on 1³/₁₆" laminate surfaces with softened vinyl rim (P) are finished to match the rim.

Single-rim option has the selected rim detail on the front edge only. Sides and back are finished to match the front rim.

Double-rim option has the rim detail on the front and back edges. Sides are finished to match the front and back rims.

Note: Only select shapes are available with double rim.

Grommets:

Factory-installed grommets are available through electronic specification tools for single and double rim worksurfaces; +\$108 list upcharge per grommet. Factory-installed grommet option includes black plastic grommet (models 99KG50, 99KG60, 99KG80).

Note: Not all grommet locations are available for all surfaces. Use electronic specification tools for available options.

FOOTPRINT® WORKSURFACES & SUPPORT

Bracketry and Support Guidelines | Cetra™ Panel

Planning

Statement of Line	➤See page FW.2
Planning	FW.8
Pricing	FW.23
Surface Materials	FW.96

IMPORTANT: Supports and brackets must be specified separately for all worksurfaces. Specify the appropriate supports or brackets for the specific application.

Supports and brackets are packaged separately from worksurfaces.

IMPORTANT: Careful consideration must be given to dimensions when using curvilinear worksurfaces. It is recommended that mobile undersurface storage be used.

End-to-end panel-supported worksurfaces require the additional support of a cantilever, support panel, or undersurface storage at every joint.

Perpendicular panel-supported worksurfaces can use flat brackets and edge support brackets to provide adequate support at the worksurface joint.

Column or tapered legs can provide additional support for worksurfaces. Support panels may also be used. Verify dimensions before specifying.

Cetra panel-mounted worksurfaces must be supported by edge support brackets, flat brackets, cantilevers, support panels, undersurface storage units, or universal support components.
Note: When using 1³/₁₆" worksurfaces with Cetra sectional panels or mid-wireway panels, approximately 3⁸/₁₆" of the panel or bottom tile will be visible above the worksurface.

Unsupported span of 48" for 1³/₁₆" worksurfaces or 60" for 1⁹/₁₆" worksurfaces requires additional support, such as a cantilever, support panel, undersurface storage, or undersurface support rails.

Undersurface support rails are 3/4"H and can be used underneath the worksurface to provide support for up to 72" of unsupported span.

For unsupported span of 54"-60"W, use undersurface support rail model 45W48WSSR.

For unsupported span of 66"-72"W, use undersurface support rail model 45W72WSSR, which features a tension adjustment.

Over 72" of unsupported span requires the use of additional support such as a cantilever, support panel, or undersurface storage.

Brackets should be utilized at every panel joint to fully support the surface and to tie the panels to the worksurface.

Edge support brackets attach to the panel's slotted vertical channel and provide the most secure method of supporting a worksurface. They must be secured to the underside of the worksurface. The supporting

Corner and straight worksurfaces

Corner and straight worksurfaces

Straight worksurfaces

LEGEND

- = Edge Support Bracket
- = Cantilever
- = Pedestal
- = Flat Bracket
- = Leg

Note: Worksurface spans greater than 48"W for 1³/₁₆" surfaces and 60"W for 1⁹/₁₆" surfaces require additional support.

panel width must be equal to the worksurface depth. They also provide corner support for corner worksurfaces and are used as additional support behind an attached storage unit.

Drop brackets are used to attach adjacent worksurfaces at varying heights. They provide a 3" height change.

Flat brackets are used to align and secure two perpendicular or end-to-end worksurfaces.

➤Continued on next page.

Cetra panel-mounted support panels are 1¹/₄" thick and are available in four depths—12", 18", 24", and 30".

Considerations:

- Worksurfaces may be used with all Kimball panel systems. Specify appropriate bracketry and support for the application. face storage be used.
- Consider the worksurface load when planning support. For worksurfaces that will hold office equipment, such as laser printers and copiers, supplemental support other than standard bracketry is recommended.
- Undersurface storage and pedestals satisfy both storage and support needs.
- Reconfigurations of existing worksurfaces may require new supports or brackets.
- Supports may be positioned anywhere along the worksurface without the limitations of pre-drilled or pre-determined locations.
- HFES Method 2 can be met when using Footprint worksurfaces and storage with keyboard kit model 99K2319KKS1.
➤See the Perks Technology Management chapter in the *Kimball Accessory Solutions Price List*.

FOOTPRINT® WORKSURFACES & SUPPORT

Planning

Statement of Line	➤ See page FW.2
Planning	FW.8
Pricing	FW.23
Surface Materials	FW.96

18", 24", and 30"D support panels are used on the end of worksurfaces that are not panel wrapped. Support panels can also be used as additional support for worksurfaces that exceed the recommended kneespace. They should be attached to the panel in back of the worksurface and to the underside of the worksurface to provide maximum strength. Panel and worksurface brackets are attached; however, they can be reversed for left- or right-hand applications.

12"D support panels are intended for use as additional support in the middle of a run when kneespace exceeds the recommended span. 12"D support panels do not attach to panel reveals.

Support panels may be used in freestanding or Traxx applications when modesty panels are not used as long as the back edges are not exposed. Back edges of support panels are unfinished. If the back edge of the support panel will be exposed, request that it be finished. Support panels are equipped with adjustable leveling glides to align the worksurfaces. They provide 1 1/4" of adjustment.

Note: Cetra support panels may be used in freestanding or Traxx applications by removing panel brackets and ordering a support panel bracket or gusset bracket for additional support as needed. If back edge of support panel will be exposed, request that it be finished. If modesty panel is required, specify a freestanding support panel.

Pedestals provide support for the front edge of worksurfaces. A back bracket must also be used to attach the surface to the panel.

Cantilevers are used as support in the center of long worksurfaces or in configurations where other support methods are not possible. They may be used as support when placing two surfaces end to end. Cantilevers may be used as sole support when wing panel width is different than worksurface depth. A pedestal or support panel must be used if there is no wing panel. Cantilevers are handed, however, they can share the load of the adjacent worksurface with use of flat brackets.

Universal support components are available for use as additional alternative support solutions.

FOOTPRINT® WORKSURFACES & SUPPORT

Bracketry and Support Guidelines | Narrate® Panel-Mount

Planning

Statement of Line	➤ See page FW.2
Planning	FW.8
Pricing	FW.23
Surface Materials	FW.96

IMPORTANT: Supports and brackets must be specified separately for all worksurfaces. Specify the appropriate supports or brackets for the specific application. Supports and brackets are packaged separately from the worksurfaces.

IMPORTANT: Careful consideration must be given to dimensions when using curvilinear worksurfaces. It is recommended that mobile undersurface storage be used.

End-to-end panel-supported worksurfaces require the additional support of a mid-support, support panel, or undersurface storage at every joint.

Perpendicular panel-supported worksurfaces can use flat brackets and edge support brackets to provide adequate support at the worksurface joint.

Support, column, or tapered legs can provide additional support for worksurfaces. They can provide support to the front edge of a worksurface, but do not stabilize adjacent loadbearing panels. Support panels may also be used. Verify dimensions before specifying.

Narrate-mounted worksurfaces must be supported on the ends by edge support brackets, full-depth support panels, end-support legs, C-leg supports, or undersurface storage units.

Unsupported span of 48"W for 1³/₁₆" worksurfaces or 60"W for 1⁹/₁₆" worksurfaces requires additional support such as a mid-support, support panel, undersurface storage, or undersurface support rails.

Undersurface support rails are 3/4"H and can be used underneath the worksurface to provide support for up to 72" of unsupported span.

For unsupported span of 54"–60"W, use undersurface support rail model 45W48WSSR.

For unsupported span of 66"–72"W, use undersurface support rail model 45W72WSSR, which features a tension adjustment.

Over 72" of unsupported span requires the use of additional support such as a cantilever, support panel, or undersurface storage.

➤ Continued on next page.

FOOTPRINT® WORKSURFACES & SUPPORT

Bracketry and Support Guidelines | Narrate® Panel-Mount, continued

Planning

Statement of Line	➤ See page FW.2
Planning	FW.8
Pricing	FW.23
Surface Materials	FW.96

Flat brackets, 10"D support panels, or mid-supports should be used as additional support at every worksurface joint. Additional support is also required every 48" on 1 $\frac{3}{16}$ " worksurfaces and every 60" on 1 $\frac{9}{16}$ " worksurfaces.

Use Narrate support Traxx with edge support brackets to support the ends of worksurfaces where no other support (pedestals, etc.) are present.

One edge support bracket is required for the back corner of corner worksurfaces. It can be installed on either side if there is no support Traxx.

A mid-support is recommended to support the seam if each worksurface is 48"W or greater, or the combined length of the two worksurfaces is 96"W or greater.

Specify quantity of worksurface edge support brackets to match worksurface size and type.

Worksurface mid-supports may be used as additional support, along with a flat bracket. They cannot provide support at the end of a worksurface and can only be used with an end-support leg in balanced configurations.

Mid-supports are available in two heights for use at 2-high and 3-high locations.

Flat brackets are used to align and secure two perpendicular or end-to-end worksurfaces.

End-support legs are for use at the end of panel run or in the middle of a run in place of a mid-support. They must be used with a worksurface and be attached vertically with two screws to the panel frame (through the tile) and to the worksurface. The worksurface conceals the attachment holes in the top of the leg.

End-support legs are not applicable to 6- and 7-high configurations.

C-leg supports can be used to support the end of a worksurface, while allowing kneespace clearance. They are ideal for a fixed-height return used with a height-adjust desk. C-leg supports are available with a foot designed to match either Priority of Xsede height-adjust bases. Additional support is also required on surfaces greater than 48"W (1 $\frac{3}{16}$ " worksurfaces) or 60"W (1 $\frac{9}{16}$ " worksurfaces).

Mid-support legs are visually compatible with end-support legs. They require a flat bracket, specified separately, and must be secured to the worksurface but not to the tile and frame.

Transaction counter brackets recess into Narrate's top channel and are screwed to the frame.

Top cap is required beneath a transaction counter. The width of the top cap should match the width of the frame to which the transaction counter will be mounted. Top cap must be modified in the field to accommodate transaction counter brackets.

Specify two transaction counter brackets for 24" to 60"W counters. Specify four brackets for 66" to 96"W counters.

Transaction counter brackets will not interfere with cables routed through the top channel.

Pricing	FW.23
Surface Materials	FW.96

Flat brackets, 12"D support panels, or mid-supports should be used as additional support at every worksurface joint. Additional support is also required every 48" on 1³/₁₆" worksurfaces and every 60" on 1⁹/₁₆" worksurfaces.

Use Xsite Traxx with edge support brackets to support the ends of worksurfaces where no other support (pedestals, etc.) are present.

Brackets adjust for worksurface heights from 27³/₄" to 29", at ⁵/₈" increments, measured from the floor to the top of the 1³/₁₆" worksurface.

Two edge support brackets are required for the back corner of corner surfaces, one on each side.

Specify quantity of worksurface edge support brackets to match worksurface size and type.

Adjustable worksurface mid-supports may be used as additional support. They cannot provide support at the end of a worksurface and can only be used with an end-support leg in balanced configurations. They do not extend far enough under the worksurface to provide sufficient support in one-sided configurations. Adjustable mid-supports are not visually compatible with end-support legs.

2-high adjustable mid-supports will adjust vertically from 27³/₄" to 29", at ⁵/₈" increments, measured from the floor to the top of the worksurface.

3-high adjustable mid-supports will adjust vertically from 40¹/₄" to 41¹/₂", at ⁵/₈" increments, measured from the floor to the top of the 1³/₁₆" worksurface.

Specify adjustable mid-supports to match worksurface depth.

Flat brackets are used to align and secure two perpendicular or end-to-end worksurfaces.

End-support legs are for use at the end of panel run or in the middle of a run in place of a mid-support. They must be used with a worksurface and be attached vertically with two screws to the panel frame (through the tile) and to the worksurface. The worksurface conceals the attachment holes in the top of the leg.

End support legs are not applicable to 6- and 7-high configurations.

Mid-support legs are visually compatible with end-support legs. They require a flat bracket, specified separately, and must be secured to the worksurface but not to the tile and frame.

Transaction counter brackets recess into Xsite's top channel and are screwed to the frame.

Top cap is required beneath a transaction counter. The width of the top cap should match the width of the frame to which the transaction counter will be mounted. Top cap must be modified in the field to accommodate transaction counter brackets.

Specify two transaction counter brackets for 24" to 60"W counters. Specify four brackets for 66" to 96"W counters.

Transaction counter brackets will not interfere with cables routed through the top channel.

FOOTPRINT® WORKSURFACES & SUPPORT

Bracketry and Support Guidelines | Traxx®-Mount

Planning

Statement of Line	➤See page FW.2
Planning	FW.8
Pricing	FW.23
Surface Materials	FW.96

Traxx worksurface brackets attach worksurfaces to bottom Traxx. Traxx-mounted worksurfaces must be supported by worksurface brackets, flat brackets, support panels, undersurface storage units or universal support components. A bracket is required every 48" along back edge of worksurface in addition to corner and end locations.

Note: When using 13/16" worksurfaces with Traxx, approximately 3/8" of the bottom Traxx will be visible above the worksurface.

End-to-end worksurfaces require a support panel or undersurface storage for additional support of the front edge.

Perpendicular worksurfaces can use flat brackets and Traxx brackets to provide adequate support from one surface to the other at the worksurface joint.

Universal support components, such as tapered, stick, or column legs, are available as alternative support solutions for worksurfaces.

➤See page FW.91.

Worksurface brackets have an anti-kickout design that provides secure attachment without pre-determined positioning.

Unsupported span of 48" for 13/16" worksurfaces or 60" for 19/16" worksurfaces requires additional support, such as a cantilever, support panel, or undersurface storage.

➤See the Xsede Open Plan chapter of the *Kimball Systems Solutions Price List* for undersurface support rails that can be used as additional support for unsupported spans up to 72".

Corner and straight worksurfaces; Traxx wrapped

Corner and straight worksurfaces; support panels

Corner and straight worksurfaces; storage

LEGEND

○ = Traxx bracket

□ = Pedestal

▬ = 12" support panel

▬ = 10" mid-support

◻ = Support panel

□ = Flat bracket

Note: Worksurface spans greater than 48"W for 13/16" surfaces and 60"W for 19/16" surfaces require additional support.

Considerations:

- Worksurfaces may be used with all Kimball panels systems. Specify appropriate bracketry and support for the application.
- Consider the worksurface load when planning support. For worksurfaces that will hold office equipment, such as laser printers and copiers, supplemental support other than bracketry is recommended.
- Undersurface storage and pedestals satisfy both storage and support needs.
- Reconfigurations of existing worksurfaces may require new supports or brackets.
- Supports may be positioned anywhere along the worksurface without the limitations of pre-drilled or pre-determined locations.

Traxx Worksurface Bracket Attachment:

FOOTPRINT® WORKSURFACES & SUPPORT

Bracketry and Support Guidelines | Wall-Mount

Planning

Statement of Line	➤ See page FW.2
Planning	FW.8
Pricing	FW.23
Surface Materials	FW.96

Wall-mount worksurface brackets

attach directly to the wall and the underside of worksurfaces. Wall-mounted worksurfaces must be used in conjunction with flat brackets, support panels, undersurface storage, or universal components to support the front edge of the surface.

One bracket is required every 30"

along the back edge of the worksurfaces in addition to corner and end locations.

Wall-mount worksurface brackets

can be mounted to 1/2" to 3/4" drywall. Brackets do not have to tie into sub-structure of a structural wall, providing that recommended fasteners are used.

➤ See page FW.18 for details.

End-to-end worksurfaces

require a support panel or undersurface storage for additional support of the front edge.

Perpendicular worksurfaces

can use flat brackets and wall-mount worksurface brackets to provide adequate support from one surface to the other at the worksurface joint.

Universal support components, such as tapered, stick, or column legs, are available as alternative support solutions for worksurfaces. ➤ See page FW.91.

Unsupported span of 48" for 1 3/16" worksurfaces or 60" for 1 9/16" worksurfaces requires additional support, such as a cantilever, support panel, or undersurface storage. ➤ See the Xsede Open Plan chapter of the *Kimball Systems Solutions Price List* for undersurface support rails that can be used as additional support for unsupported spans up to 72".

Installation height should correspond with standard worksurface height of 27 3/4". Actual mounting height can be varied to meet specific needs; however, undersurface storage height must be considered. Variations in floor (peaks and valleys) should be considered.

Corner and straight worksurfaces; wall wrapped

Note: Worksurface spans greater than 48"W for 1 3/16" surfaces and 60"W for 1 9/16" surfaces require additional support.

Considerations:

- Worksurfaces may be used with all Kimball panels systems. Specify appropriate bracketry and support for the application.
- Consider the worksurface load when planning support. For worksurfaces that will hold office equipment, such as laser printers and copiers, supplemental support other than bracketry is recommended.
- Undersurface storage and pedestals satisfy both storage and support needs.
- Reconfigurations of existing worksurfaces may require new supports or brackets.
- Supports may be positioned anywhere along the worksurface without the limitations of pre-drilled or pre-determined locations.
- Front edge of the worksurface requires support.

FOOTPRINT® WORKSURFACES & SUPPORT

Bracketry and Support Guidelines | Wall-Mount | Recommended Fasteners

Planning

Statement of Line	➤See page FW.2
Planning	FW.8
Pricing	FW.23
Surface Materials	FW.96

Fasteners must tie in directly to the to 1/2" to 3/4" drywall of a structural wall for proper attachment of wall-mount worksurface bracket. Kimball defines a structural wall as a loadbearing wall constructed of materials such as poured concrete, concrete block, or studs. Direct attachment to studs is not required, but is recommended when possible.

Selection and purchase of the proper attachment fasteners for your wall conditions is the responsibility of the installer.

Type and Size	Commercial Model #
Steel studs (1/2" to 3/4" drywall)	
Hilti® Toggler® anchor toggle bolts, 1/4"-20 x 2" grade 5 bolts	374494
Wood studs (1/4" to 1/2" drywall) <i>Meets or exceeds ANSI/ASME B18.6.4 and SAE J933.</i>	
Pan head sheet metal screw	10-2 PHPMS
Solid Masonry	
Crown Bolt lag shields 1/4" x 1 1/2"	
Buildex Tapcon concrete anchor screw 1/4" x 2 3/4"	24385
Masonry Block	
Hilti Toggler anchor toggle bolts, 1/4"-20 x 2" grade 5 bolts	374494
Crown Bolt lag shields 1/4" x 1 1/2"	
Buildex Tapcon concrete anchor screw 1/4" x 2 3/4"	24385
➤See assembly instructions on www.kimball.com .	

Minimum Requirements:

- Wood studs must be nominal 2" x 4" minimum.
- Metal studs must be "C" channel, 20 gauge minimum thickness.
- Metal or wood studs must be on centers no greater than 24" and have a maximum height of 14' restrained at floor and ceiling.
- Interior walls must be designed to resist not less than a force of 5 lbs. per sq. ft. applied perpendicular to the wall. The deflection of such walls under a load of 5 lbs. per square foot shall not exceed 1/240 of the span for walls with brittle finishes and 1/120 of the span for walls with flexible finishes (per International Building Code sections 1604.4 and 1607.13).

FOOTPRINT® WORKSURFACES & SUPPORT

Bracketry and Support Guidelines | Freestanding

Planning

Statement of Line	➤ See page FW.2
Planning	FW.8
Pricing	FW.23
Surface Materials	FW.96

Freestanding worksurfaces can be created by configuring a stable combination of freestanding support panels, freestanding end supports, freestanding corner supports, square or flat profile undersurface storage.

Freestanding corner supports provide support for corner worksurfaces in freestanding applications.

Wood and Laminate:

Freestanding undersurface support panels are used to support worksurfaces in freestanding applications. Their depth is 1 1/8" less than the worksurface to accommodate a modesty panel.

Freestanding end supports are used to support worksurfaces in a freestanding application. Worksurfaces used in freestanding applications must be attached to a return or extension worksurface for additional support.

Universal support components, such as tapered or column legs, are available as alternative support solutions for worksurfaces.
➤ See page FW.91.

Modesty panels provide undersurface privacy, additional support, and a finished appearance. They may be used in freestanding applications. Hardware is included for attachment to the underside of the worksurface.

Flush appearance is achieved by specifying the modesty panel to be the same width as the worksurface. It will cover the back of storage units or supports.

FOOTPRINT® WORKSURFACES & SUPPORT

Bracketry and Support Guidelines | Freestanding, continued

Planning

Statement of Line	➤ See page FW.2
Planning	FW.8
Pricing	FW.23
Surface Materials	FW.96

Breakfront appearance is achieved by specifying three modesty panels. Two 18"W modesty panels to cover the backs of square profile pedestals and one equal to the width of the space between the pedestals.
Note: Breakfront appearance can only be achieved with square profile storage.

Modesty filler strip is used if a modesty panel is not specified. It maintains space for cable routing behind the pedestal and fills the 1 1/8" difference in depth.

Flat brackets are used to align and secure two perpendicular or end-to-end worksurfaces.

Drop brackets are used to attach adjacent worksurfaces at varying heights. They provide a 3" height change.

Column, stick, and tapered legs cannot be used in freestanding applications.

Metal Support:

Metal modesty panels attach 4" inset from the approach side of the pedestal or support panel. Wire management is achieved via a 1 1/2" space between the top of the modesty panel and the underside of the surface as well as a 3" gap from the bottom of the modesty panel to the floor.

Pedestal non-deface kit allows attachment of metal modesty panel to metal pedestals without drilling holes in the sides.

End panels are used to support worksurfaces in freestanding applications. They are equipped with adjustable leveling glides that provide 1" of adjustment for aligning worksurfaces. They are designed to secure metal modesty panels.

8" return support can be used as support for corner surfaces or as additional support for 24"D worksurfaces that exceed the recommended kneespace.

8"D support panels cannot support any worksurface deeper than 24". They are equipped with one leveling glide that provides 1" of adjustment for aligning worksurfaces.

Corner posts are used to create freestanding corner units. They are equipped with one leveling glide that provides 1" of adjustment for aligning worksurfaces. They are designed to secure metal modesty panels.

Filler strip is used if a metal modesty panel is not specified. It maintains space for cable routing behind the pedestal and fills the 1 1/8" difference in depth for wood or laminate applications.

Flat brackets are used to align and secure two perpendicular or end-to-end worksurfaces.

Drop brackets are used to attach adjacent surfaces at varying heights. They provide a 2" height change.

Single-pedestal desks and credenzas must be connected to another unit; not intended for use as a freestanding unit.

Metal Support

Common Applications:

8"D support panel applies to 24"D (return) worksurface.

7"D corner post applies to freestanding corner surfaces.

12"D support panel applies to any depth corner worksurface, providing it is bracketed to adjacent unit, and 30"D (return) worksurface, providing additional support is used to match surface depth.

18"D half end panel applies to any depth corner worksurface.

18"D undersurface lateral file applies to any depth worksurface, providing full end panel is included to match surface depth.

24"D pedestal and full end panel apply to 24"D or 30"D worksurfaces.

30"D pedestal and full end panel apply to 30"D or 36"D worksurfaces.

36"D full end panel applies to 36"D worksurfaces.

90 " Straight	2 Support Panels	2"	88"
96" Straight	2 Peds.	30"	66"
96" Straight	1 Ped., 1 Support Panel	16"	80"
96" Straight	2 Support Panels	2"	94"

Notes:

* Freestanding corner units require 2 modesty panels. Corner Post is 7"W (nominal) and is inset 4" (actual); total of 11". When combined with the support panel (1"), support width is 12" (nominal). When combined with the pedestal (15"), support width is 26" (nominal).

Unsupported surface span cannot exceed 48"W for 1³/₁₆" worksurfaces or 60"W for 1⁹/₁₆" worksurfaces.

To determine the metal modesty panel width, subtract the total nominal width of support (pedestal and/or end panel) from the nominal worksurface width.

Example:

$$\begin{aligned}
 &60"W \text{ worksurface} \\
 - &30"W \text{ support (2 pedestals)} \\
 = &30"W \text{ modesty panel}
 \end{aligned}$$

For planning purposes, the chart at right uses the term support panel to refer to full support panels, return support panels, and worksurface support panels since all are nominally 1" wide.

Support depth underneath the left and right side of the worksurface must be equal unless the unit is secured to an adjacent, freestanding unit such as a return.

FOOTPRINT® WORKSURFACES & SUPPORT

Bracketry and Support Guidelines | Universal Supports

Planning

Statement of Line	➤See page FW.2
Planning	FW.8
Pricing	FW.23
Surface Materials	FW.96

Universal supports can be used in any panel-mounted, Traxx-mounted, or freestanding application.

Support panel brackets and gusset brackets provide additional stability between a worksurface and support panel when the support panel is not attached to a panel.

Adjustable column base provides 4" of adjustment. It is equipped with a glide.

Decorative support leg includes glides and carpet grippers. Inserts are specified separately.

Metal modesty panel can be secured to decorative support leg and/or gusset bracket on either end. Gusset bracket must be specified separately.

Static and adjustable-height mobile table legs are available for use with worksurfaces and table tops.

Units using tapered leg, column leg, adjustable column base, or decorative support leg must be secured to an adjacent worksurface for stability.

Cylinder and half-cylinder bases are available for use with table tops and worksurfaces. Table support bases include anti-tip weight.

Adjustable base, X-base and T-base are available for use with table tops and worksurfaces.

Note: Review support recommendations on the pricing pages when specifying tops and support for table use.

The illustration below shows a variety of worksurface configurations and support options. Please use these examples to aid you in specifying appropriate support for specific applications.
Note: Worksurface spans greater than 48"W for 1³/₁₆" surfaces and 60"W for 1⁹/₁₆" surfaces require additional support.

IMPORTANT: Brackets must be specified separately.

Side edges are finished to match the top; wire manager is on the back edge.

Exception: Side edges on worksurfaces with vinyl rim option (P) are finished to match the front vinyl rim.

Return combo dimensions are determined from left to right when seated at the worksurface

* Height (thickness) for TFL worksurfaces is 1¹/₈".

Standard Includes

- Worksurface

How to Specify

- 1 Model
- 2 Material:
 LL = TFL
 T = 3D laminate
 L = HPL
 LW = HPL with wood rim
 W = Wood
- 3 Rim option:
 3 = Wire manager
- 4 Rim profile:
 S = Sloped rim (available on 3D laminate surface only)
 P = Softened vinyl rim (available on TFL or HPL surfaces only)
 F = Wood, softened rim
- 5 Surface finish price group:
 STD = Group 1
 STD2 = Group 2 3D laminate (+\$94)
- 6 Surface finish designator
- 7 Rim finish price group (include for laminate with wood rim only):
 STD = Group 1
- 8 Rim finish designator (include for laminate with wood rim or P rim only)
- 9 Wire manager finish designator

Rim Profiles:

Softened Vinyl (P)

Waterfall (K)

Wood Softened (F)

Reed (W)

Scalloped (X)

Transitional (E)

IMPORTANT: Brackets must be specified separately.

Arc worksurfaces are 30"D on the ends and 36"D in the center.

Rim detail appears on the front and back rims.

Side edges are finished to match the front and back rims.

Double rim worksurfaces are designed for freestanding applications.

Standard Includes

- Worksurface

How to Specify

- 1 Model
- 2 Material:
 - L = Laminate
 - LW = Laminate with wood rim
 - W = Wood
- 3 Rim option:
 - 2 = Double rim
- 4 Rim profile:
 - P = Softened vinyl rim (available on laminate surface only)
 - F = Wood softened rim
 - W = Wood reed rim
 - X = Wood scalloped rim
 - E = Wood transitional rim
- 5 Surface finish price group:
 - STD = Group 1
- 6 Surface finish designator
- 7 Rim finish price group (include for laminate with wood rim):
 - STD = Group 1
- 8 Rim finish designator (include for laminate with wood rim and P rim)

1"	19 ¹ / ₁₆ "	24 ³ / ₁₆ "	FMFS0124	\$48	\$61
		27 ³ / ₁₆ "	FMFS0127	48	61

Standard Includes

- Modesty panel or filler strip

Tips

IMPORTANT: Supports must be specified separately.

➤ See pages –FW.22 for proper support application.

If a modesty panel is not used, specify the modesty filler strip which maintains space for cabling behind pedestal while filling the 1¹/₈" difference in depth.

Grain direction runs horizontal on 60"W or wider woodgrain laminate modesty panels.

If using wood modesty and support panels with flat profile metal pedestals with wood fronts to create freestanding desk applications, specify the worksurface to be deeper than the pedestals.

FOOTPRINT® STORAGE

Overview

Planning

Statement of Line	➤ See page FS.2
Planning	FS.8
Pricing	FS.33
Surface Materials	FS.99

Overhead storage is available in wood, laminate, metal, metal/laminate, metal/wood, and laminate/metal combinations.
Note: Not all profiles are available in all materials.

Overhead storage can be can be mounted on panels, Traxx, building walls, mounted between storage units in freestanding applications.
 ➤ See chart on page FS.18 for possible applications by storage profile.

Specifying Checklist:

- ☐ Pull options
- ☐ Pedestal reveal strips and modesty filler strips when side of square profile pedestal is exposed
- ☐ Tops for square profile freestanding lateral files
- ☐ Back panels for any storage units that have unfinished backs that will be exposed
- ☐ Change key
- ☐ Lock cores if key specific option is selected
- ☐ Additional file bars if required
- ☐ Appropriate support brackets for panel system or Traxx application
- ☐ Traxx when wall mounting overheads
- ☐ Vertical cord managers
- ☐ Ganging kit when mounting overheads side-by-side.

1 $\frac{3}{16}$ " and 1 $\frac{1}{4}$ " worksurfaces may be used with all undersurface storage. Mobile storage units are recommended when specifying curvilinear worksurfaces.

Undersurface storage is available in wood, laminate, metal, and metal/laminate combination.
Note: Not all profiles are available in all materials.

All undersurface storage may be used with any Kimball panel system.

FOOTPRINT® STORAGE | UNDERSURFACE

Square Profile

Planning

Statement of Line	➤ See page FS.2
Planning	FS.8
Pricing	FS.33
Surface Materials	FS.99

Details

Square profile undersurface storage is available in wood or laminate.

Pedestals are 12" or 18"W with finished sides. They can be used at the ends of storage arrangements for a finished look without using support panels.

1½" glides provide 1¼" of adjustment.

Filing hardware for front-to-back and side-to-side filing is included for pedestals and lateral files. Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file holders to utilize strength of the drawer sides. Drawer interiors are black.

➤ See page FS.11 for filing capacities.

Pedestal tops are open except for the horizontal frames which allow attachment to the underside of the worksurface.

Pedestal backs feature an unfinished sub-back or stretcher rails and a partial sub-back. For this reason, modesty panels are required for freestanding applications. Exception: Suspended storage units have a finished back.

Backs can be finished with a full-width modesty panel for freestanding applications. For breakfront applications, specify two 18"W modesty panels for backs of pedestals and an additional modesty panel equal to the width of the kneespace between pedestals.

Mobile pedestals are finished on the top and all sides.

Locks are standard on 18"W pedestals. They are located on front of cabinet. Locks feature a black core and housing. 12"W models are non-locking.

➤ See page FS.28 for keying options. Exception: 12"W models are non-locking.

Surface Materials

Square Profile Storage and Filler Panels

- Wood
- Laminate

Pulls

➤ See next page.

Connections

Pedestals are 23"D or 29"D. They are sized 1" less than worksurface depths to accommodate cable access when placed against a wall, or for the addition of a modesty panel.

Planning Factors

Undersurface pedestals and lateral files provide support for worksurfaces. They are not intended to be used as freestanding units. 29"H worksurfaces can be supported by file/file, box/box/file, lateral file, and hinged door pedestals.

When suspended pedestals are used in a freestanding application, modesty panels attached to end panels are required to form a desk shell for support.

Only one suspended pedestal should be used per worksurface; additional mid-support is required for surfaces greater than 48"W.

Related Products

Filler panels are available in wood or laminate. They can be scribed in the field to finish out cabinetry for a custom fit.

Pedestal reveal strips should be specified when the side of a pedestal is exposed. It conceals the small space between the top of the pedestal and the underside of the worksurface.

Modesty filler strip should be specified if a modesty panel is not used or if the storage component is not panel wrapped. Modesty filler strip maintains space for cabling behind pedestal while filling in the difference in storage and worksurface depth.

- EDP size paper is 8¹/₂" x 14⁷/₈".

Filing Hardware:

Heavier lines in the illustrations at left indicate file bars. File bars to accommodate front-to-back and side-to-side filing as shown are shipped standard with file/file pedestals and lateral files.

FOOTPRINT® STORAGE | UNDERSURFACE

Flat Profile

Planning

Statement of Line	➤See page FS.2
Planning	FS.8
Pricing	FS.33
Surface Materials	FS.99

Details

Flat profile undersurface storage features a drawer-front-over-case design. Flat profile storage is available in all metal or with metal chassis and wood fronts.

Pedestals are 15"W. Suspended box/file pedestals are mounted beneath the worksurface. File/file and box/box/file pedestals support worksurfaces at 29"H.

Glides provide 1" of adjustment.

File drawers accommodate front-to-back filing by suspending hanging files from the drawer sides. For side-to-side filing, additional file bars are required.

➤See the Perks Work Tools chapter in the *Kimball Accessory Solutions Price List*.

Box and file drawer suspensions allow full extension.

Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file folders to utilize strength of the drawer sides.

Lateral files include two side-to-side file bar per drawer for letter filing. Front-to-back file bars are specified separately.

➤See the Perks Work Tools chapter in the *Kimball Accessory Solutions Price List*.

Tops are not enclosed. Worksurfaces attach directly to the horizontal frame.

Backs and sides are finished.

Mobile pedestals are finished on all sides and are available with painted or cushion top. Cushion-top pedestal seated capacity is 225 lbs.

File center consists of box, file, and lateral file drawers. Box drawers can be specified in either the left or right drawer locations. One lock secures all drawers.

Locks are standard on undersurface storage. They are located on front of cabinet. Locks feature a black core and housing.

➤See page FS.28 for keying options.

Bookcases feature an enclosed back and include one adjustable shelf. Shelf adjusts in 1/2" increments. Glides on bookcases provide 1" of adjustment.

Surface Materials

Flat Profile Storage

- Metal: all paints
- Wood fronts: all wood finishes

Note: All metal is finished using a powdercoat paint process.

Pulls

➤See list at right for available finishes.

Connections

Undersurface pedestals and lateral files provide support for worksurfaces. They are not intended to be used as freestanding units. 29"H worksurfaces can be supported by file/file, box/box/file, lateral file, and file center pedestals.

Suspended pedestals must be attached to worksurfaces that meet all application guidelines; suspended pedestals are non-supporting.

Suspended pedestal, model 12S1915PUBFM, is intended for use with Xsede 22"D wire gap surfaces with tech trays. This model features spacers to allow the ped to fit around an undersurface support rail which is required if the unsupported span is over 48". Must be placed next to Xsede support legs (U-legs without stanchions, U-legs with stanchions, T-legs, or H-legs).

Flat profile undersurface storage (12S models) are designed for use with 13S vertical storage. Models include a kickrail on the front of the unit.

Related Product

Metal modesty panel, when specified, attaches to the sides of pedestals. Metal modesty panels are recommended for use with flat profile pedestals.

➤See the Footprint Worksurfaces and Support chapter in *Kimball Systems Solutions Price List*.

If using wood modesty and support panels with flat profile metal pedestals with wood fronts to create freestanding desk applications, specify the worksurface to be deeper than the pedestals. Specify 24"D pedestal for use with 30"D worksurface; 30"D pedestal with a 36"D worksurface; or 18"D lateral file with a 24"D worksurface.

Non-deface kit, specified separately, is available to allow attachment of modesty panel without defacing the side of the pedestal.

➤See the Footprint Worksurfaces and Support chapter in *Kimball Systems Solutions Price List*.

Drawer Pull Options:

Extended
(metal only)

Arc*

Span*

*Suitable for ADA applications.

Surface Materials	FS.99

Details

Flat profile undersurface storage features a drawer-front-over-case design, with fronts flush to the bottom of the case. Units are available in all metal or with metal chassis and laminate front.

Pedestals are available in 15", 30", 36", or 42" widths. Units are available with an open top or metal tops. Models with open top require 18"D or 24"D tops (worksurfaces), specified separately.
➤See the Xsede Open Plan chapter in the *Kimball Systems Solutions Price List* for 24"D tops.

Glides Casters 4" legs

Floor glides are standard and provide 3/8" of adjustment. Casters and 4" legs are available as an option; upcharge applies. Legs provide 7/8" of adjustment.
Note: Illustration of glides enlarged to show detail as compared to the relative size of the casters and legs.

File drawers accommodate front-to-back filing by suspending hanging files from the drawer sides. For side-to-side filing, additional file bars are required.
➤See the Perks Work Tools chapter in the *Kimball Accessory Solutions Price List*.

Box and file drawer suspensions allow full extension.

Lateral files includes two side-to-side file bar per drawer for letter filing. Front-to-back file bars are specified separately.
➤See the Perks Work Tools chapter in the *Kimball Accessories Price List*.

Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file folders to utilize strength of the drawer sides.

Backs and sides are finished.

Seat cushions are available separately for low storage pedestals. Seat cushions with anti-skid back can be added to metal-top models or open-top models with a laminate top. Seated capacity is 225 lbs.

Locks are optional; they are available in black or silver finish options.
➤See page FS.28 for keying options.

A variety of pull options are available.
➤See page FS.17.

Surface Materials

Flat Profile Storage

- Metal: all paints
- Laminate fronts: TFL

Connections

Units may be ganged together facing the same direction or reversed to one another. A single top may be added to open-top or metal top models and, may span multiple units. Tops are specified separately.

Flat profile low storage (14S models) are designed for use with 15S vertical storage. 15S vertical storage models are available with glides or 4"H legs. 14S low storage is also available with 4"H casters.

Related Product

18"D tops are available.
➤See page FS.53.

24"D tops are available as part of the Xsede worksurfaces offering and may be used with Footprint low storage units.
➤See the Xsede Open Plan chapter in the *Kimball Systems Solutions Price List*.

Seat cushions are available.
➤See page FS.54.

FOOTPRINT® STORAGE | OVERHEAD

Square Profile

Planning

Statement of Line	➤ See page FS.2
Planning	FS.8
Pricing	FS.33
Surface Materials	FS.99

Details

Square profile overheads are available in wood, laminate, wood chassis with a glass front, or laminate chassis with a glass front, and in hinged or flipper door models.

Overhead cabinets and highback organizers ship pre-assembled.

19"H

16"H

16"H overheads feature a smaller profile and accommodate standard-size binders.

Flipper doors include easy-down mechanism. 7" clearance above the cabinet is required.

42"W and 48"W hinged door overheads have three doors with a single door on the right. A support

panel divides the overhead into two separate sections as indicated above.

60"W and 72"W hinged door overheads have four doors.

60"W and 72"W flipper door overheads have two doors.

Backs of overheads are unfinished and may be visible when used on panels that are 61"H or less. Backs are partial height in flipper and hinged door overheads.

Highback organizers have an unfinished back. Task light and tackboard must be specified separately. Cord exit is centered directly above tackboard through the back panel. Panel fabric is turned 90° and applied railroad style on 72"W tackboards.

Locks are optional on square profile overhead storage. Locks are located on the front of the cabinet. Locks feature a black core and housing.

➤ See page FS.28 for keying options.

Surface Materials

Square Profile Overheads

- Wood
- Laminate
- Glass front

Square Profile Highback Organizers

- Wood
- Laminate

Square Profile Filler Panels

- Wood
- Laminate

Connections

Xsite, Cetra, and Traxx can support square profile overheads.

Wall mounted cabinets are hung from a single upper Traxx channel. Traxx spacer (5/8" full length shim), specified separately, is required when wall mounting overheads without using Traxx tiles. Traxx full end trim should be specified when the end of wall mounted overhead is exposed.

➤ See the Traxx & Tiles chapter in the *Kimball Systems Solutions Price List*.

In freestanding applications, a single overhead unit can be supported by two angle brackets attached to short storage cabinets, vertical storage cabinets, or a combination of both.

Related Products

Overhead mounting brackets must be specified separately.

➤ See pages FS.67–FS.71.

Ganging kit is required when hanging overheads side-by-side. When mounted on Cetra panels, the inside left and right overhead brackets are replaced by the ganging bracket.

➤ See page FS.73.

Filler panels are available to build out cabinetry for a custom fit. Filler panels are scribed in the field.

Door Pulls:

Integrated

Integrated door pulls are standard. Integrated pulls run the full length of the door along the bottom edge.

Glass Patterns:

Linear
Vertical

Frosted

FOOTPRINT® STORAGE | OVERHEAD

Flat Profile | Sliding Door

Planning

Statement of Line	➤See page FS.2
Planning	FS.8
Pricing	FS.33
Surface Materials	FS.99

Details

Sliding-door overheads feature a metal chassis with metal, laminate or wood front. Units are available with one-sided or two-sided access. Units ship fully assembled.

Locks are optional on sliding-door models; they located on the bottom of the cabinet. Locks feature a black core and housing. Consider lock access when placing the overhead above other storage units or worksurfaces.
➤See page FS.28 for keying options.

One-sided sliding-door models have one sliding door. A center panel divides the space; one compartment will be open at all times. Door can lock in either position. One-sided models are available for:

- Center mounting on Xsite panels or Xsede accessory rail
- Center mounting on Xsede accessory rail
- Wall mounting using wall standards
- Traxx mounting
- Panel-mount (face-mount) on Cetra or Xsite

Note: Panel-mount model features a removable, full back for access and clean aesthetics.

Two-sided sliding-door models for use in center-mount applications only on Xsite panels or Xsede accessory rail; they feature one-sliding door on each side. Center panel divides the space and each compartment features a fully finished back panel. Both sides can be locked independently on locking models; they must feature the same keying option.

Surface Materials

Flat Profile Overhead Storage

- Metal chassis/metal door
- Metal chassis/laminate door
- Metal chassis/wood door

Connections

One-sided sliding-door overheads can be panel-mounted. Mounting and leveling brackets are included as standard. Overall depth of the overhead (front of the cabinet to the panel face) varies depending on the panel and it's applicable attachment brackets:

- 15 1/16"D on Cetra
- 14 15/16"D on Xsite

One-sided sliding-door overheads can be wall-mounted using Traxx or wall standards. Leveling bracket is standard on the back of the cabinet; Traxx spacers are not required.

Sliding-door overheads can be center-mounted on Xsite panels. Mounting brackets are included as standard. Consider coordinating the bracket color to Traxx color.
➤See the Xsite chapter in the *Kimball Systems Solutions Price List*.

Sliding-door overheads can be center-mounted on Xsede accessory rails. Stanchion mounting brackets (set of 2) must be specified separately; one set is required per overhead.

Cubbies cannot be mounted below a center-mounted overhead due to interference in the shared Traxx.

Planning Factors

Brackets for panel-mount sliding-door models are standard and painted to match the chassis. The following options are available:

Designator Brackets Included

For Xsite or Wall Traxx	
X	2 Xsite Traxx brackets
XG	2 Xsite Traxx brackets and 1 ganging bracket

For Wall Standards	
I	1 left and 1 right
IG	1 left, 1 right, and 1 ganging bracket

For Cetra	
C	1 left and 1 right
CG	1 left, 1 right, and 1 ganging bracket

Brackets for center-mount sliding-door models are standard for Xsite. The following options are available:

Designator Brackets Included

For Xsite Flat Profile Top Cap	
XC2F	2

Related Products

Mounting stanchion brackets, set of 2, must be specified separately for use with Xsede accessory rail. Each overhead requires two stanchion brackets.

FOOTPRINT® STORAGE | OVERHEAD

Flat Profile | Flipper Door, Open Cabinets, & Cubbies

Planning

Statement of Line	➤ See page FS.2
Planning	FS.8
Pricing	FS.33
Surface Materials	FS.99

Details

Flipper-door overheads have a metal chassis and wood doors with integrated pulls. Metal chassis is available in all paint finishes. Wood fronts are available in all standard wood finishes. Doors feature steel ball bearing, easy-down slides. Units ship fully assembled.

Locks are standard on flipper-door models; they are located on the front of the cabinet. Locks feature a black core and housing.

24"W–48"W flipper-door units have one door with lock. 54"W–72"W units have two individually locking doors.

One-sided open cabinets feature a finished back and center panel that divides space. They are available in center-mount models for use with Xsite panels or Xsede accessory rail. Set-on-surface models and suspended models can be used at the end of worksurface.

Two-sided open cabinets are for center mounting only on Xsite panels or Xsede accessory rail. A center panel divides the space; each compartment features a finished back panel.

Cubbies have a metal chassis and are available in all paint finishes. Cubbies are standard with a Traxx bracket. Units ship fully assembled.

Surface Materials

Flat Profile Overhead Storage

- Metal chassis/metal door
- Metal chassis/laminate door
- Metal chassis/wood door

Connections

Flipper-door overheads and cubbies can be panel-mounted (on the face of the panel) on Cetra or Xsite, or hung on Traxx.

Set-on-surface open cabinets are intended for mounting on top of the worksurface at the end of a run. 51", 57", and 63"W units can span back-to-back worksurfaces in Xsede accessory rail applications.

Suspended open cabinets mount below the end of a run in Xsede crossrail and accessory rail applications. Worksurface supports will need to be inset approximately 15" which impacts kneespace clearance.

24" and 30"W units can be used on 24" and 30"W surfaces in a return application.

24" and 30"W set-on-surface cabinets can be used at the end of a surface and specified to align with 51", 57", or 63"W suspended storage below in an Xsede crossrail or accessory rail application.

Cubbies cannot be mounted below a center-mounted overhead due to interference.

Planning Factors

Overhead mounting brackets must be specified separately for flipper-door models based on the application.

➤ See pages FS.67–FS.71.

Ganging kit is required when mounting overheads side-by-side in panel-mount or Traxx-mount applications.

FOOTPRINT® STORAGE | OVERHEAD

Bevel Profile

Planning

Statement of Line	➤See page FS.2
Planning	FS.8
Pricing	FS.33
Surface Materials	FS.99

Details

Bevel profile overheads are metal and are available in all paint finishes.

Receding door overheads are available in paint or with fabric covered doors. Door finish and chassis finish on painted units must be the same. Ships pre-assembled.

Doors operate on ball bearing slides that are fitted into the unit.

24"W–48"W units have one door with black lock.

54"W–72"W units have two individually locking doors.

Full height shelf has a single compartment and full height back. Ships ready-to-assemble.

Highback organizers include two vertical end panels, back panel, overhead unit, and attachment hardware. Recesses at corners of back panel allow for wire management. Ships ready-to-assemble.

Highback organizer must be same nominal width as freestanding unit on which it will be attached.

Panel fabric is turned 90° and applied railroad style to 72"W highback tackboards.
➤See the *Kimball Surface Materials Reference Guide* at www.kimballinternational.com for illustration of railroad application.

Tackboards and task lights must be specified separately for highback organizers.

Locks are standard. They are located on the front of the cabinet. Locks feature a black core and housing.
➤See page FS.28 for keying options.

Surface Materials

Bevel Profile Overhead Storage

- Metal: paint
- Fabric door with metal chassis: panel or seating fabrics

Connections

Bevel profile overheads can be supported by Xsite, Cetra, and Traxx.

Wall standards can be used to mount bevel profile overheads to building walls. A maximum of two components may be attached to a set of wall standards, not to exceed 150 lbs. Blocking and bearing on floor is recommended.

Related Products

Overhead mounting brackets must be specified separately if mounting on Xsite, Cetra, or Traxx.
➤See pages FS.67–FS.71.

Ganging kit is required when hanging overheads side-by-side.

FOOTPRINT® STORAGE | VERTICAL

Square Profile

Planning

Details

Square profile vertical storage units are available in wood or laminate.

Short storage cabinets are available in wood or laminate. Door may be hinged on the left or right. Short storage finish panel should be specified if back of short storage unit will be exposed.

Overall height of short storage cabinets is affected by worksurface thickness. When aligning short storage cabinets with other vertical or overhead storage units specify the 39"H models for use with 1 $\frac{9}{16}$ " worksurfaces and 40"H models for use with 1 $\frac{3}{16}$ " worksurfaces.

Lateral files feature a drawer interlock that prevents tipping. Top and back of lateral files are unfinished. Specify a worksurface to cover an individual lateral file or to span multiple lateral files. Tops are not

enclosed. Worksurfaces attach directly to the horizontal frame.

Two drawer lateral files with hinged doors include one adjustable shelf in hinged door storage area. Lateral file finish panel should be specified if back of unit will be exposed. Lateral file filler strip should be specified if side of unit will be exposed.

Filler panels are available in wood or laminate. They can be scribed in the field for a custom fit.

All vertical storage units ship pre-assembled.

Vertical storage units are finished on the top and sides. Interiors are finished to match the exterior. 18"W units can be specified with finished or unfinished backs. Backs are unfinished on 30" and 36"W units. Specify a finish panel separately if back will be exposed.

Wardrobes and storage cabinets are available with finished or unfinished backs. Finished back, if specified, matches the chassis.

6"W and 18"W wardrobes include hang bar. 18"W wardrobe also includes an adjustable shelf.

6"W wardrobe is not freestanding and must be attached to adjacent storage or wall.

Touch latch is standard on all doors.

Filing hardware for front-to-back and side-to-side filing is included. Drawer bottoms are not intended to support heavy loads. Drawer interiors are black.

➤See page FS.11 for filing capacities.

Pull-out storage units are finished on all sides and top. Available for left- and right-hand applications. Includes:

- One full-depth shelf on top (with optional felt)
- One fixed shelf and one adjustable shelf on 42" and 50"H models; one fixed and two adjustable shelves on 54"H model
- Coat/bag hook below top shelf and behind the lower shelves
- Salt USB or Pepper power units are optional

File drawers are designed to accommodate hanging files suspended from the drawer sides.

Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file folders to utilize strength of the drawer sides.

Wardrobe doors may be specified on the left or right of the unit.

Coat rod is galvanized metal.

Wardrobe shelf is Cinder with 1/2" adjustability.

Locks are optional on doors and pull-out storage; locks are standard on pedestals. They are located on the front of the cabinet. Locks feature a black core and housing.

➤See page FS.28.

Bookcase shelves are spaced 12" apart. 42"H bookcase features three shelves; one is adjustable. 50" and 56"H bookcases features four shelves; two are adjustable. 68"H bookcase features five shelves; three are adjustable.

Planning

KEY:

• = Available

How to Specify

Specify pull option and finish together in one step. If finish designator is a number, insert an underscore between the pull designator and the finish designator. For finish or pull designators that are letters, put the pull and finish together without a space or underscore.

Examples:

ARC462 = Arc pull, Cinder

55_486 = Weld pull, Clear

66SN = Span pull, Satin Nickel

FOOTPRINT® STORAGE | VERTICAL

Flat Profile | 12S & 13S

Planning

Statement of Line	➤See page FS.2
Planning	FS.8
Pricing	FS.33
Surface Materials	FS.99

Details

Flat profile vertical storage units are available in all metal or with a metal chassis and wood fronts.

Bookcases (12S) include enclosed back and factory installed shelves.

Shelves adjust in 1/2" increments.

Storage towers (13S) include file/file cabinet, wardrobe/storage section, and/or open shelves.

Non-locking is standard on all 13S units. Key random and key specific locking options are available with a black or silver lock core and key. Upcharge applies.

Storage tower, when specified with a lock option, will have individual locks in each section. Select a key specific option, and a specific key number separately, to key them alike.
➤See page FS.28 for keying options.

Storage tower spacers are metal. They fill the space between back-to-back storage towers used at the end of an Xsede workstation with 24"D and/or 30"D worksurfaces.

File drawers are designed to accommodate hanging files suspended from the drawer sides.

Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file folders to utilize strength of the drawer sides.

Wardrobe doors may be specified on the left or right of the unit.

Wardrobe shelf is Cinder with 1/2" adjustability.

Surface Materials

Flat Profile Vertical Storage

- Metal: paint
- Wood fronts: all wood finishes

Planning Factors

13S 42 1/16"H models will align with 42"H Xsede and 3-high Xsite frames, and are compatible with 42"H Cetra panels.

13S 49 1/16"H models will align with 50"H Xsede and 3.5-high Xsite frames, and are compatible with 50"H Cetra panels.

Flat profile undersurface storage (12S models) are designed for use with 13S vertical storage. Models include a kickrail on the front of the unit.

FOOTPRINT® STORAGE | VERTICAL

Flat Profile | 15S

Planning

Statement of Line	➤ See page FS.2
Planning	FS.8
Pricing	FS.33
Surface Materials	FS.99

Details

Flat profile vertical storage units are available in all metal or with metal chassis and laminate (TFL) fronts.

Storage towers include box/box/file or file/file and with hinged-door storage or open shelves.

Wardrobe and personal storage lockers are available.

Wardrobe doors may be specified hinged right or left.

Wardrobe hooks are included and installed on the left side of 18"D units.

Extended coat hook and adjustable metal shelves are available separately. Extended coat hook is galvanized metal and used in 24"D wardrobes.

Non-locking is standard on all 15S units. Key random and key specific locking options are available with a black or silver lock core and key. Upcharge applies.

Storage tower spacers are metal. They fill the space between back to back 24"D and/or 30"D storage towers used at the end of an Xsede workstation.

File drawers are designed to accommodate hanging files suspended from the drawer sides.

Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file folders to utilize strength of the drawer sides.

Glides

4" legs

Floor glides are standard and provide $\frac{3}{8}$ " of adjustment. 4" legs are available as an option; upcharge applies. Legs provide $\frac{7}{8}$ " of adjustment.

Note: Illustration of glides enlarged to show detail as compared to the relative size of the legs.

Surface Materials

Flat Profile Vertical Storage

- Metal: paint
- Laminate fronts: TFL

Planning Factors

15S 42 $\frac{1}{16}$ "H models will align with 42"H Xsede and 3-high Xsite frames, and are compatible with 42"H Cetra panels.

15S 49 $\frac{1}{16}$ "H models will align with 50"H Xsede and 3.5-high Xsite frames, and are compatible with 50"H Cetra panels.

Shelves for storage towers are specified separately.

Fixed shelf (top of ped portion) on storage towers with glides will be approximately 3 $\frac{1}{16}$ " below the height of adjacent worksurfaces.

Flat profile low storage (14S models) are designed for use with 15S vertical storage. 15S vertical storage models are available with glides or 4"H legs. 14S low storage is also available with 4"H casters.

* Suitable for ADA applications

** Brushed nickel and chrome are plated finishes

† +\$29/unit upcharge applies to all-metal units only; no upcharge on TFL-front and wood-front models.

Note: Linear pull wraps the drawer face and attaches on the backside of the drawer. Extended pulls, available on metal-front models only, are painted to match the chassis.

FOOTPRINT® STORAGE

Locking Information

Planning

† GSA Non-Contract

Locking storage units can be specified as:

- Key random
- Key specific

Lock cores are shipped separately for field installation.

Black lock cores with black hinged keys are identical to the ones available on the following Casegoods products:

- Definition
- Priority

Silver lock cores are matte nickel and have black hinged keys. These lock cores and keys are identical to the ones available on the following products:

- Definition
- Priority

IMPORTANT: Most Footprint storage is available with a black core and black housing, either as standard, or as an option. Footprint flat profile low storage and flat profile vertical storage are available with a silver lock options (KRS or KSS), for which the lock housing will also be silver. If a silver lock is desired on other products, select KSB (key specific, black) option and specify silver lock cores separately; please be aware that the housing will be black.

Key Random Option:

When key random option is selected, key numbers will be assigned arbitrarily at the factory with key numbers ranging from KSCD001 to KSCD300 (black) or KSCG001 to KSCG100 (silver).

Randomly numbered lock core(s) will ship standard along with your order for field installation.

With random keying, different furniture units may or may not have the same key number. If you must have all locks keyed differently or all locks keyed the same, choose the key specific option.

Key Specific Option:

When key specific option is selected, the storage unit will be pre-drilled to accept a lock core; however, no lock cores will be shipped standard with the unit. If lock cores are standard on the unit, the price of the unit is reduced by the price of the lock core or cores.

You must specify lock core(s) separately for key specific option; specify any key number from KSCD001 to KSCD300 (black) or KSCG001 to KSCG100 (silver).

To key all the furniture units in a workstation or department alike, choose the key specific option and order the quantity of locks needed for your installation.

Standard key that ships with the lock core can be used for the initial installation of the lock core in the field.

Change key model KCCB1CK allows removal of keys within these ranges:

KSCD001–KSCD300
KSCG001–KSCG100

IMPORTANT: A change key, specified separately, is required to remove lock cores in the field.

Master key model KS2GMK will unlock any lock within these key ranges:

KSCD001–KSCD300
KSCG001–KCCG100

Statement of Line	➤See page FS.2
Planning	FS.8
Pricing	FS.33
Surface Materials	FS.99

Model/Key Range Price

Black Lock Core with Black Hinged Key

KSCD001 to KSCD300 † \$36

Silver Lock Core with Black Hinged Key

KSCG001 to KSCG100 † \$36

Change Key

KSCD1CK † \$24

Master Key

KS2GMK † \$24

How to Specify

1 Specify exact key number for lock cores as the model number or model number for change or master key

	41⅟16"		12S1642BCUM	1156

Standard Includes

- Chassis: metal
- Drawer fronts on lateral file and file center: metal
- Four spacers
- One lock on lateral file and file center: black (locks all drawers)
- Open top on lateral file and file center; closed top on bookcase
- One adjustable shelf on bookcase

How to Specify

- 1 Model
- 2 Pull option (omit for bookcase):
➤See page FS.12 for designators and upcharges.
- 3 Lock option (omit for bookcase):
KRB = Key random
KSB = Key specific (-\$36);
specify one lock core separately.
- 4 Metal finish price group:
STD = Group 1
STD M = Group M (+10%)
- 5 Metal finish designator

Undersurface lateral files and file centers have open tops and are not to be used as stand-alone units.

File center file drawers utilize drawer sides for front-to-back filing.

Pedestal Filler Strips
➤See page FS.41.

File Bars for Side-to-Side Filing
➤See the Perks Work Tools chapter in the *Kimball Accessory Solutions Price List*.

* Depth dimension listed represents pedestal with TFL front; metal-front models are 1/16" less deep.

Laminate Tops
➤See page FS.53.

Seat cushions
➤See page FS.54.

Standard Includes

- Chassis: metal
- Drawer front: metal or TFL
- Counterweight (installed)
- Floor glides

How to Specify

Low Storage

- ① Model
- ② Front material (omit for metal front):
LL = TFL front
- ③ Pull option:
➤See page FS.17 for designators and upcharges.
- ④ Lock option:
X = Non-locking
KRB = Key random, black (+\$111)
KRS = Key random, silver (+\$111)
KSB = Key specific, black (+\$75)
KSS = Key specific, silver (+\$75)
Note: Specify one lock core separately for key specific.
- ⑤ Metal finish price group:
STD = Group 1
STDM = Group M (+10%)
- ⑥ Metal finish designator
- ⑦ Laminate finish designator (omit for metal-front models)
- ⑧ Support option:
G = Floor glides
4LA = 4" legs, anodized (+\$108)
4LP = 4" legs, painted (+\$108)
4C462 = 4" casters, cinder (+\$133)
4C501 = 4" casters, platinum metallic (+\$133)

IMPORTANT: If using center-mount overheads with Narrate, you must specify Narrate support Traxx for both sides of the frame where center-mount overhead will be installed.

Stanchion Brackets for Xsede
Accessory Rail
➤See page FS.72.

Standard Includes

- Chassis with center divider: metal
- Attachment brackets (finished to match storage)

How to Specify

- ① Model
- ② Center-mount bracket option:
X = No brackets; specify stanchion brackets separately to attach to Xsede accessory rail
XC2F = For Xsite flat profile
- ③ Finish price group:
STD = Group 1
STDM = Group M (+10%)
- ④ Finish designator

* Depth dimension listed represents storage unit with TFL front; metal-front models are 1/16" less deep.

Standard Includes

- Chassis: metal
- Doors: metal or TFL
- Floor glides

How to Specify

- 1 Model
- 2 Front material (omit for metal front):
LL = TFL front
- 3 Pull option:
➤ See page FS.27 for designators and upcharges.
- 4 Lock option:
X = Non-locking
KRB = Key random, black (+\$111 per lock)
KRS = Key random, silver (+\$111 per lock)
KSB = Key specific, black (+\$75 per lock)
KSS = Key specific, silver (+\$75 per lock)
Note: Specify lock core(s) separately for key specific.
- 5 Metal finish price group:
STD = Group 1
STD M = Group M (+10%)
- 6 Metal finish designator
- 7 Laminate finish designator (omit for metal-front models)
- 8 Support option:
G = Floor glides
4LA = 4" legs, anodized (+\$108)
4LP = 4" legs, painted (+\$108)

Customer's Own Material (COM) Yardage Requirements

Surface Materials

Model	66"W Directional	54"W Directional	66"W Non-Dir.
-------	---------------------	---------------------	------------------

Flat Profile Mobile Pedestal with Cushion Top*

12S2415PMBFCTM1	1.0	1.0	1.0
-----------------	-----	-----	-----

*The requirement for a single pedestal is one yard. However, two cushion-tops can be cut from a single yard. For example, 51 tops would require 26 yards. Always round up to the next full yard when ordering multiple pedestals.

Kimball has analyzed each model to most accurately reflect the yardage requirements.

The yardage requirement for each model is listed for 66"W directional, 66"W non-directional, and 54"W directional, where applicable.

If repeat is larger than 18", contact Customer Service to confirm the correct amount of yardage required.

If you specify different panel fabrics for opposite sides of a panel, additional yardage may be required. ➤Contact Customer Care.

If COM fabric is to be "railroaded," contact Customer Care for yardage requirements.

➤See the *Surface Materials Reference Guide* at www.kimballinternational.com for COM policy and additional information.

How to Use this Table

- ① Locate the model number
- ② Select yardage from the appropriate column.
