

### **KindVR Overview**

KindVR specializes in developing virtual reality software experiences designed to help patients mitigate pain and stress during medical procedures. KindVR's software experiences are customized for patients' body position and patient safety during procedures.

Currently, KindVR is engaged in over 15 active clinical trials and has four published studies evaluating sickle cell disease pain crisis, mediport access procedures for oncology patients, and procedural pain during IV Insertion in pediatric EDs. KindVR has over seven years experience collaborating with pediatric research hospitals on clinical trials targeting common pediatric procedures.

KindVR's hardware & software is now in use at over 70 Children's Hospitals and clinics.

### **What makes KindVR unique?**

KindVR is the only virtual reality healthcare company focused on providing proven support for pediatric procedures. KindVR's virtual reality equipment is customized for use in clinical settings, with special considerations for infection control and ease-of-use for hospital staff. KindVR's clinically-validated software is custom designed for positive patient outcomes and patient safety. KindVR provides training sessions for hospital staff as well as technical support.
