Desk Frames

A Desk Frame can function as both an independent single desk, or the start of a consecutive run. Two pre-assembled pairs of legs are connected with structural Tie-Bars to complete the Frame. The easy to assemble and robust **Edge Desk Frames** provide function with a refined design aesthetic.

Offered in both Double and Triple frame versions, **Edge Desk Frames** can be utilized in both a single sided or double sided applications. For increased functionality in the system, powered frames are also available.

Double Frame Desk

Triple Frame Desk For Back-to-Back Configurations

Desk and Extension Frames, Powered

Building off of the non-powered frames, Edge powered frames offer the same size and configuration options. To achieve power data distribution, one of the Tie-Bars is replaced with fluidconcepts' **Serviceway** channel. This robust channel delivers power and data to the user in a concealed and discrete manner.

Used in both single and double sided applications, Edge powered frames can satisfy needs in open plan areas as well as private offices. Desk frames come pre-configured in four circuit or single circuit set ups.

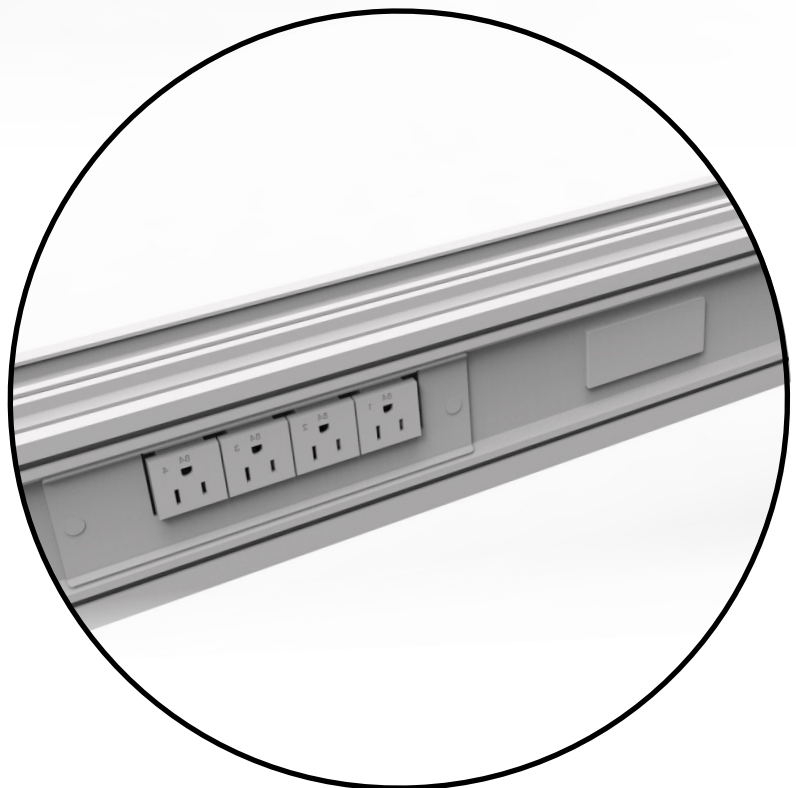

Available in Single circuit or Multi circuit configurations, A **Double Frame Desk** provides power and data on one side.

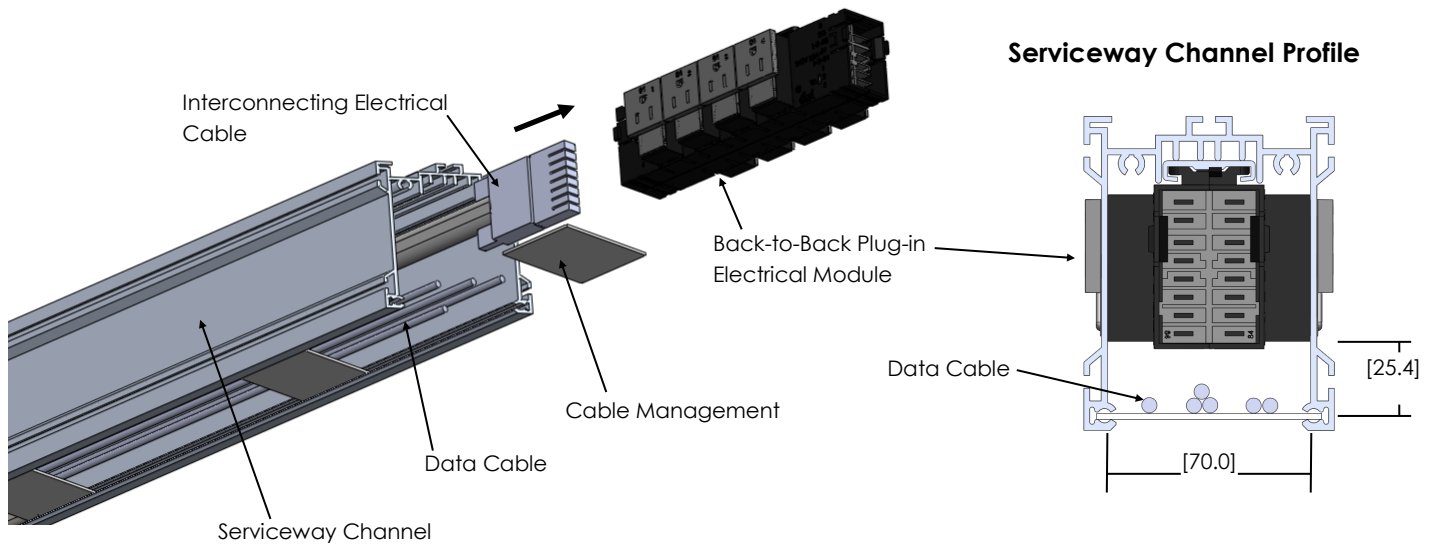

Electrical Capacity

Powered Desk Frames are pre-configured with the choice of single circuit (for **Plug-in** base feed) or multi circuit (for **Hard-wire** base feed) simplexes.

It is not recommended to have more than 2 users feeding off of one Plug-in base feed. Because of this, **Powered Extension Frames** are not available in a single circuit configuration. Adding Extension Frames will increase the number of users, and therefore will require a multi circuit, **Hard-wire Base feed**.

Electrical details

The Serviceway channel provides data and electrical distribution and access. A "plug and play" style interconnecting cable will deliver power from one station to the next. This allows for both a quick initial setup, as well as easy future additions.
