SPECIFICATIONS

Bed

The bed is composed of: 1) bed frame ends, 2) caps, glides and stacking devices, 3) bed deck assembly, 4) lower horizontal reinforcing member (lofting applications only). See dimensions page for combination of components and dimensions.

Bed Frame Ends

Bed frame ends are fabricated of two heavy 14-gauge steel tubular uprights. A vertical slotted pattern on 1" centers is located on the front and back of each to accept and provide height adjustment of bed deck and hang-on components. Two 14-gauge uprights are joined by three horizontal 1- 1/4" round steel tubes which are welded to the tubular uprights to create a ladder effect. Electrostatically applied epoxy powder finishes applied for maximum durability.

Top Caps, Base Glides and Stacking Devices

Caps and glides are black molded nylon for maximum strength and are inserted into the ends of the vertical tubes of the bed frame ends. They utilize a friction fit so as to eliminate accidental dislodgement yet be capable of removal or installation when lofting or delofting beds.

Stacking devices are molded of black glass reinforced nylon for maximum torsional strength. They insert with friction fit into top and bottom of the bed frame ends to provide structural joinery for bunked or lofted beds.

Deck Assembly

The board deck frame assembly is composed of two 11-gauge steel rails with a series of hooks on each end that fasten into the vertical slots of the bed frame end. They are height adjustable from top to bottom anywhere along the vertical slot pattern of the upright. A side rail of 5/8" thick, 45-lb. density particle board with .030 high-pressure laminate face, .028 backer sheet and Polypropylene edge band is attached to the outside surface of the steel bed rails for a finished appearance. Four 16-gauge formed steel deck stringers drop into belt loop style embosses that are equally spaced on the bed rails. These deck stringers span between the two rails and support the solid bed deck. Electrostatically applied epoxy powder is applied for maximum durability.

The bed deck is composed of three 3/4" thick 45-lb. density particle board deck boards which have white melamine top and bottom surface to resist stains and to provide a light, finished appearance to the underside. They are edged banded with white Polypropylene. The deck boards lay in from above on top of the steel deck stringers and are captured at the ends of the bed to prevent sliding. The deck boards are 36-1/4W x 26-3/8"L and are universal end-to-end and top-to-bottom.

Spring Bed Deck Assembly

The spring bed assembly consists of an all steel riveted construction. Primarily, the perimeter frame is made with 1-1/2" x 2" x 5/32" thick angles and includes 4 – 1" x 11ga. corner gussets, 2 – 1" dia. cross tubes. The internal portion of the frame is designed for comfort; it consists of action

arc z-hooks, (6) 8ga. and (10) 9ga. wire and is connected together by (36) 12ga. helical springs and (160) 12ga. wire links. Electrostatically applied epoxy powder is applied to the complete assembly for maximum durability. A side rail of 5/8" thick, 45-lb. density particle board with .030 high-pressure laminate face, .028 backer sheet and Polypropylene edge band is attached to the outside surface of the steel bed rails for a finished appearance, the11-gauge steel bed rails have a series of hooks on each end to fasten into the vertical slots of the bed frame end.

Sleeping Surfaces

Sleeping surface (or mattress size) is 36" x 80". 13-gauge contract unit, boric acid felt each side, insulator pad each side, 7" thick, foam corners with black polyester tape. Cover is flanged and hog ringed to unit coils to hold insulation in proper place. Mattresses are wrapped in 4mm plastic film. Meets Federal Government Flammability Standards DOC FF4-72. Covering-210 Denier nylon Oxford/urethane coating. Bed bug resistant.

Lower Reinforcing Member

The lower reinforcing member is positioned at the lower back side of a loft bed assembly to provide structural integrity. It is a 1" thick x 7-9/16"H x 80"L fabricated box section comprised of 18-gauge and 11-gauge steel with a series of hooks on each end for attachment to the bed frame ends. It is not required for single or bunk bed configurations. It is coated with electrostatically applied epoxy powder for maximum durability.

Anti-racking Bar

The Universal Anti-racking Bar is made from 16 Gage round steel tube and 14 gage bracketry to lock it into the patterned slots of the bed ends. Each end of the anti-racking bar has brackets with teeth that mount it into the bend end slots and locks that secure it from being dislodged. The lock is secured with tightening of a hand wheel screw.

Hang-on Worksurfaces

Worksurfaces are constructed of 45-lb. high density particle board laminated with .030 face sheet and .028 backer sheet of high-pressure laminate. Polypropylene edges provide optimal durability.

Worksurfaces are supported by two 14- gauge drawn steel cantilever brackets which hook into the slotted channels of the bed uprights. This provides height adjustability to suit the comfort of the student. Brackets are designed to prevent accidental dislodgement. A 1-1/8"H x 2-1/8"W cutout is located in the upper rear corner of each bracket to allow cables from the worksurface to drop over the edge and pass through the bracket.

PowerUp® option provides two grounded power outlets and voice and data terminal connections locations. Standard with 9" grounded cord. One PowerUp® module centered left to right at the rear of the surface.

Hang-on Tack boards

The tackboard is constructed of fabric upholstered 3/4" thick industrial grade micore. It is attached to an 11-gauge powder-coated steel back which incorporates hooks for hanging on the bed frame end.

Hang-on Megasurface

Megasurfaces are constructed the same as regular hang-on worksurfaces but are composed of two 15" x 37" x 40" x 18" corner surfaces to provide maximum worksurface ideal for computers. The surfaces span the full length under the loft and have a concave edge on the user side creating a wrap around effect. A full-length tackboard 80"L x 16"H is included providing tackable space and worksurface support.

PowerUp® option provides two grounded power outlets and voice and data terminal connections locations. Standard with 9" grounded cord. Two PowerUp® modules provided, one in each rear corner.

Hang-on Shelf Unit

End panels of the shelf are particle board covered by .030 high-pressure laminate with the edge banded by matching Polypropylene edge banding. The steel bottom shelf is 16-gauge steel, powder-coat paint. The steel back is 11-gauge and incorporates hooks to hang the shell at the desired height from the bed frame. Hook design prevents accidental dislodging.

Task Light

UL Listed task light attaches to the flange on the underside of shelf or flipper door cabinet. Includes a 15 watt cool white lamp and 8" cord with grounded plug. Included 16" cord manager attaches to slotted channel in bed frame and manages cables above or below worksurface. Black only.

Mobile and Freestanding Pedestal

One piece 20-gauge steel shell with enclosed 20-gauge top. 22-gauge, 3-piece welded drawers with multiple offsets providing maximum strength and moisture resistance. Heavy-duty steel ball-bearing drawer suspensions. Lock options: no lock, "Top drawer only" lock which provides security to the top drawer via user supplied padlock, or double bitted/removable core key lock (on steel front units only). Freestanding units supplied with counterbalance weight. Mobile units have caster located in bottom of lower drawer front to prevent forward tipping. Painted with high-quality baking enamel. Four heavy-duty casters (2 locking) provide mobility for mobile pedestals.

Steel front pedestals have 20-gauge, double wall fronts with integral drawer pull. Front painted to match the pedestal shell.

Pedestals with woodgrain laminate front & top have 3/4" thick fronts and top constructed of particle board core with high-pressure laminate surface. Edges of top, and drawer front sides are banded with matching Polypropylene for added durability. Bottom and top edges of drawer fronts are banded with matching 1mm Polypropylene for a tight, clean fit between drawers. Drawer pull is 8"W, 16-gauge steel, waterfall design painted to match the pedestal shell. Grain direction on top is side-to-side, on drawer fronts is vertical.

Hang-on Drawer Unit

Construction is same as hang-on flipper door unit except two drawer fronts are attached to powder-coated steel drawer bodies. Drawer oper-

ates on heavy-duty multistage steel ball-bearing suspension. Double bitted removable core lock.

Freestanding Wardrobe Unit

Shell is constructed of 20-gauge steel. Uprights and top and bottom reinforcements are welded into a rigid "box frame." Two 18- gauge reinforcements located along the bottom front and back of cabinet house four threaded weldnuts to accept adjustable leveling glides. 18-gauge top reinforcement. Lock options: no-lock, "Top Drawer only" lock which provides security to the top. Drawer of combination wardrobes via user supplied padlock, or double bitted/removable core key lock. Drawers are 20-gauge steel with slotted bottoms for ventilation. Heavy-duty steel ball-bearing drawer suspensions. Painted with high-quality baking enamel.

Steel fronts units have 20-gauge drawer fronts and doors (double wall) with integral pulls. Fronts painted to match the wardrobe shell.

Wardrobes with woodgrain laminate front have 3/4" thick doors and drawer fronts constructed of particle board core with high-pressure laminate surface. All horizontal edges are banded with matching 1mm Polypropylene for a tight clean fit, with all vertical edges banded with matching Polypropylene for added durability. Drawer pull is 8"W, 16-gauge steel, waterfall design painted to match the wardrobe shell. Door pulls are located at top of doors and are same design as on drawer but with half located on each door. Grain direction is vertical.

Stack-on Wardrobe

Construction of case and doors is same as wardrobe unit. This unit is intended to stack on top of wardrobe unit to provide additional storage and is reversible to face forward or backward. Power cord exits are located on each side. Thumb screw attachment method provides easy yet positive attachment to top of wardrobe unit. Locking is optional. Painted with high-quality baking enamel. Door pull on woodgrain laminate door is at bottom and inverted.

Freestanding Dressers

Shell is constructed of 20-gauge steel with seamless back and top with reinforced corners. Heavy-duty steel ball-bearing drawer suspensions. Lock options: no-lock, "Top Drawer Only" lock which provides security to the top drawer via user supplied padlock, or double bitted/removable core key lock which locks all drawers (on steel drawer front units only). Painted with high-quality baking enamel.

Steel front dressers have drawer fronts of 20-gauge steel with integral pulls. Front painted to match the dresser case.

Wardrobes with woodgrain laminate front and top have 3/4" thick front and top constructed of particle board core with high-pressure laminate surface. Edges of top and drawer front sides are banded with matching Polypropylene for added durability. Bottom and top edges of drawer fronts are banded with 1mm matching Polypropylene for a tight clean fit. Drawer pull is 8"W, 16-gauge steel waterfall design painted to match the pedestal shell. Grain direction on top is left to right, on

drawer fronts is vertical.

Keyboard Tray

Mounts under hang-on worksurface to provide access and storage for computer keyboards. Molded black plastic surface with molded palm rest operates on steel ball-bearing telescopic suspensions.

CPU Sling

Mounts under hang-on worksurface to provide access and storage for CPU, freeing up worksurface space. Straps have positive locking clamps. Provides 5-1/2" of travel and 359° swivel. Accommodates CPU with maximum circumference of 65". Maximum weight capacity is 75-lbs. Available in black only.

Center Drawer

Mounts under hang-on worksurface or mega-surface. Formed of molded plastic with compartment for pencils, paper clips etc. Non-locking. Operates on a formed suspension with ball bearing glides for smooth operation.

Pedestal and Freestanding Dresser Tops For Steel Front Units

Constructed of particle board core with .030 face sheet and .028 backer sheet of high-pressure laminate. Polypropylene edges for optimal durability. Tops are installed on pedestals or freestanding dressers in the field by use of factory applied double-sided tape.

Ladder Assembly

Construction consists of 16ga. steel support bracket which hooks over the top edge of the beds with side rail or under and around spring bed side frame. The ladder assembly is constructed of two 75" upright 1" x 2" x 16ga. seamless rectangular tubes with five 3/4" x 1-1/2" x 14ga. seamless flat oval tubes, which form the rungs. Rungs are inserted into the rectangular uprights and a #10 threaded rod is inserted through the rungs and drawn up from each end via stay-fast Allen head joint nuts. A RH and LH bottom-mounting bracket is supplied to secure bottom of ladder when used without a lower bed. The brackets are made of 11ga. steel and attached to the ladder with a 1/4"-20 thumb screw. The bracket hooks into the bed frame ends via adjustable notches. Ladder and support brackets are coated with electrostatically applied powder-coated for maximum durability.

Bed Safety Bar

Constructed of 14-gauge steel plate which mounts to the inside of the bed deck side rail, and 1"o.d.-14-gauge seamless steel tube which extends above the bed deck to provide additional safety for the sleep area. Epoxy powder coated for maximum durability.

INFORMATION

Warranty

See"Terms" for general information.

Fabric

Fabric will be applied as swatched by the fabric manufacturer. Fabric that is required to be applied differently than is swatched will need a Product

Modification Request written specifying the direction the fabric is to be applied. The posted standard lead time will apply to the Product Modification Request.

HOW TO ORDER

Indicate the following information on order form:

- Quantity of each item.
- Model number, including options. See "How To Build a Model Number".
- Any special service required.

Note:

- The ☐ indicates that a choice is required.
- The absence of the ☐ indicates that no choice is required.
- Alpha-numeric characters in place of ☐ indicate that no other alternatives are available.

HOW TO BUILD A MODEL NUMBER

- A** Select basic model.
- B** Select paint color.  
Refer to the **Product Color Options** page in this price list.
- C** Select laminate color.  
Refer to the **Product Color Options** page in this price list.

OPTIONS

**Color Match**  
KI offers the additional option of color matching paint, polypropylene, or wood stain through Product Modification Requests, contact Customer Service for details.

SPECIAL SERVICES
