RE: Sole Source Provider for Data Extraction Services

University of Mississippi Medical Center (UMMC) Rowland Medical Library is requesting provision of data extraction services from Sirsi Corporation dba SirsiDynix ("SirsiDynix"). These services are needed to extract UMMC's Bibliographic/Authority, Patron Circulation and Serials Control data stored in SirsiDynix' Horizon cloud. The data requested to be extracted is specific to UMMC and must be extracted via secure file transfer in order to be exported to UMMC.

Extraction of this data will allow UMMC to populate its new Library Management System (LMS) with nearly 80,000 bibliographic/authority records that represent either a book/series/serial owned by UMMC.

Since this UMMC specific data is currently housed and maintained exclusively within SirsiDynix' Horizon cloud, to which SirsiDynix has exclusive access, SirsiDynix is the only provider with access to this data that can properly provide extraction services.

SirsiDynix is the only provider for these extraction services. No other vendors can perform the secure file transfer as required by UMMC to properly export UMMC data.

Regards,
