Smart Lift®

Smart Lift

Features

Features	
Standard size cutout area	21"W x 6"D
Maximum monitor size	21"W x 19"H x 3.6"D

SMART LIFT CONSTRUCTION

Worksurfaces
Horizontal worksurfaces are constructed of 1-1/8" thick 45# density particleboard with .030 thick high-pressure laminate and .030 thick high-pressure backing sheet. Post-formed (PL) edge worksurfaces have elliptical front edge. Rear and side edges are covered in matching flat .024" edge banding. Urethane (ME) edge worksurfaces have elliptical molded front edge. Rear and side edges molded in 1/4" flat urethane. 74P (74P) edge is 2mm thick and bonded to all 4 sides of the surface. Worksurfaces have one or two 6" x 21" cutouts which accept Smart Lift unit(s). Smart Lift price is included in the price shown for worksurface. Smart Lift cutouts in the worksurface are sealed and painted black. A single grommet or PowerUp module may be placed in most worksurfaces. Grommets are standard 5-3/4" x 2-1/4" and have a flip-up receding door. Grommets are the same size as PowerUp modules to allow for retrofitting. The grommet or PowerUp will be placed in the upper right corner for worksurface widths of 48" and 54" or centered between the

doors for the 66" and 72" double units. The door is fabricated from 5/8" thick 45# density with .030" high-pressure laminate on both faces. The door edges are sealed and painted black.

Smart Lift Beam Assembly
Beam door is constructed of a .06" thick dual-durometer extrusion joined to the steel lower rail by a tongue and groove fit. The door has a continuous flexible hinge allowing it to pivot at the bottom. The beam allows all cords to be stored within. The front side of the beam is partially covered by the garage and its components with minimum accessibility from the user side. Beams for the Smart Lift must be specified as "standalone," "end-of-run left," "middle," or "end-of-run right." Standalone beams will be shipped with two end caps; end-of-run beams will be shipped with either a left or right end cap; middle beams will not include any end caps.

Smart Lift Legs
Vertical leg tube measures 2" x 5" and is constructed of 14-gauge formed steel. All legs have vertical wire management capabilities. A reversible vertical wireway is standard with each

leg. Steel trim and liquid-tight fittings are available for power infeeds at the bottom of any leg. All "C" legs can be used as either end legs or shared legs. Nylon glide can be adjusted vertically up to 1-1/4".

Smart Lift Unit
The garage housing and front panel is fabricated from 16-gauge steel with matching powder-coated finishes. Internal components and wiring for the monitor, keyboard, and mouse can be accessed by removal of seven screws attaching the front panel. The lift bar is fabricated from 11-gauge steel with a 14-gauge steel keyboard/mouse tray and is available in black powder-coat finish. The lift bar and rising door is guided by four, maintenance-free V-groove roller bearings attached to an 11-gauge roller bracket also available in black powder-coat finish. The lift bar is raised pneumatically via a cable/pulley mechanism that is mounted inside the unit. The keyboard/mouse tray features a 3/16" diameter wire rod to hold the keyboard vertically in place for storage and provides for an area under the monitor for mouse storage. The garage unit can be specified with a keyed lock that allows every cover to be locked individually or a remote locking option that allows

multiple-unit locking via control of 1- 5 remote key fobs. Wire management within the unit is accomplished with a corrugated polyethylene hose and grommet/clamp arrangement. The hose is split lengthwise to allow for easier insertion of cords with large plugs. An optional monitor tilt kit can be specified to allow up to 10 degrees of tilt and reduce glare. Smart Lift units without monitor tilt can accommodate a VESA compliant monitor with a maximum size of 3.6" deep x 19.0" high x 21.0" wide and maximum weight of 15#. The combined keyboard and monitor thickness must be less than 4.8" thick. The maximum depth of monitor with the monitor tilt option is reduced by .6" to 3.0".

Smart Lift Operation
Monitor and peripherals can be accessed by lightly depressing the center, front of door and releasing. The unit will automatically raise fully allowing access to the monitor, keyboard and mouse. Internally stored keyboard and mouse may be removed manually for use. After use, the keyboard, mouse, and associated wiring can be restowed below the monitor. Storage of monitor and peripherals is accomplished by pushing down firmly on the top, center of door until slightly

below worksurface height and releasing.

Remote Control Unit
Sends locking and unlocking signals to receivers. Remote must be specified separately if electric lock option (ELK) is selected.

PowerUp
PowerUp is a UL Listed, relocatable power tap, which mounts flush into the table top. When flipped up, (cover open), one duplex receptacle and two data ports are exposed. PowerUp is UL Listed (UL1363) as a Temporary Power Tap. The PowerUp module is 7" long x 3-1/2" wide x 2-1/2" high and fits securely into a 6-1/4" x 3" cutout, still allowing removal without tools. The module is constructed of polycarbonate with a textured finish, meeting UL-VO minimum requirements. The module has two receptacles, rated at 15 Amps/125 Volts and two locations for data connectors. Snap-in data plates hold data connectors and allow the standard module to accommodate most manufacturers. The data connectors are not supplied with the module and are purchased by the customer. The module has a dampened spring-loaded mechanism allowing the

unit to open for use and close when not in use. The power receptacles open above the plane of the worksurface to avoid accidental spills into the receptacle. Data jacks remain stationary to avoid excess wear and tear on the wire connections and promote transmission of data communication. Data ports are molded to accept RJ45 jacks, but can be modified to accept various brands of jacks. Connection diagrams are available. Pre-wired harness comes standard with a 22" cord and a 3-prong plug.

10-Wire Pre-wired Harness
UL listed the wiring configurations of the 810-wire systems are as follows: 622-Six hot conductors (12-gauge), two neutral conductors (10-gauge) and two grounds (12-gauge). System provides four 20 amp, 125 volt capacity circuits. All receptacles are rated at 15 amps, 125 volt capacity. Pre-wired harness plugs into the adjacent table harness for table reconfiguration.
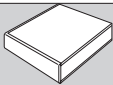

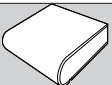

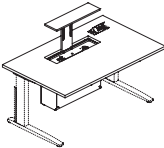

Communications Circuitry
Data connectors and wiring must be ordered separately by the customer.

Note
New York City and Chicago installations will require a Product Modification Request. Contact KI customer service for details.

INFORMATION

Shipping
Worksurfaces with cutouts are shipped separately from garage units. Garage units are shipped assembled with lids pre-attached.

FINISH INFORMATION

Additional Laminate Offering
Additional laminates beyond KI standard offering, are available with two weeks extended leadtime. To specify additional laminates, use these designators followed by the supplier's color/pattern code:

Formica - LF/supplier's color pattern code
Nevamar - LN/supplier's color pattern code
Wilsonart - LW/supplier's color pattern code

KI's standard finish is the supplier's recommended finish for that color/pattern.
Note: Nonstandard laminates from these suppliers (example: textured laminates), require an up-charge and additional leadtime. Contact KI.

INFORMATION

Infrared Receiver
Works with, and must be ordered with an Infrared Remote Control Unit to lock down or unlock a room of tables featuring flatscreen garage units. One receiver is attached to each table and can receive a signal for up to two garage units.

Infrared Remote Control
Sends locking and unlocking signals to receivers and can also be used to raise and lower multiple units at once.

Floor Infeed (10-Wire)
Two 90° connectors. Flexible steel conduit with eight 12-gauge conductors in the leg. Includes steel trim plate with dual holes for electrical and data entry and six feet of liquid-tight flexible conduit .8315 diameter.

Overhead Infeed Circuit Pre-wired
Aluminum pole is 10ft. in length. Flexible steel conduit with ten 12-gauge conductors. Includes ceiling trim plate.

HOW TO ORDER

Indicate the following information on order form:
1. Quantity of each item.
2. Model number, including options. See "How To Build a Model Number".
3. Any special service required.

Note: • The ☐ indicates that a choice is required.
   • The absence of the ☐ indicates that no choice is required.
   • Alpha-numeric characters in place of ☐ indicate that no other alternatives are available.

HOW TO BUILD A MODEL NUMBER

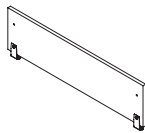

Ⓐ Select basic model.

Ⓑ Select surface finish.
   Refer to the **Product Color Options** page in this price list.
   Surface finish offerings are based on edge style selections.

FINISH INFORMATION

Additional Laminate Offering
Additional laminates beyond KI standard offering, are available with two weeks extended leadtime.
To specify additional laminates, use these designators followed by the supplier's color/pattern code:

Formica - LF/supplier's color pattern code
Nevamar - LN/supplier's color pattern code
Wilsonart - LW/supplier's color pattern code

KI's standard finish is the supplier's recommended finish for that color/pattern.
Note: Nonstandard laminates from these suppliers (example: textured laminates), require an upcharge and additional leadtime.
Contact KI.
