RE: Sole Source information – Quote 20048382

Good morning, Alex.

None of the parts on the attached quote are available from any distributor. Geoprobe® is the manufacturer and sole provider of the entire list except for the 600193 – HSA Auger Connecting Pin. Technically those are just a “j-pin” that provided they are the correct length and diameter could be sourced elsewhere.

Specifically – the 6” diameter tooling has proprietary threads that no other manufacturer provides and they are designed for use under the 3126GT’s hammer. Additionally the CPT bridge weldment and soil anchors are designed and manufactured by Geoprobe® for use with the 3126GT’s footprint and are unique for that purpose. The NWJ spring assisted lift caps are also proprietary to Geoprobe® and have been proven to make breaking and making up NWJ rod joints easier and safer under the 3126GT.

Please feel free to contact us with any questions you may have at 800-436-7762.

Regards,

Tony Bowell – Geoprobe® Sales
