

December 14<sup>th</sup>, 2022

To Whom It May Concern,

This letter is in response to University of Mississippi Medical Center's request for Sole Source letter from Ignis Health.

Ignis Health provides a software tool called Telehealth Service Implementation Model ("TSIM"). TSIM is a project, customer relationship, document management software solely designed for telehealth service implementation to enable large scale enterprise wide adoption of digital health services. TSIM is based on unique intellectual property owned by Medical University of South Carolina {"MUSC"}) and exclusively licensed to Ignis Health by MUSC for the TSIM software.

Ignis Health is the sole and only provider of this software. To our knowledge, there is no direct competitive product to TSIM in the telehealth industry.

Sincerely,

A handwritten signature in black ink, appearing to read "Najib Ben Brahim".

Najib Ben Brahim
