Statement of Sole Source

2/15/2024

Liaison's WebAdMIT for AMCAS solution is the only application processing software that is mapped identically to the AMCAS data structure. Connected to the AMCAS Data Exchange Service, WebAdMIT for AMCAS helps UMMC process all applicant data, manage the entire medical school admissions process and report admissions actions back to the AAMC in real time with validated accuracy. WebAdmIT for AMCAS relieves the schools from the burden of managing updated data structures or modernization efforts from the source (AMCAS) and has the following one-of-a-kind attributes:

- Real time admissions actions reporting to AMCAS
- 100% validated data received from AMCAS
- Easy integration with any school CRM or SiS (i.e., Workday, Slate, etc) via our API connection
- School controlled rating and scoring modules, application review and interview management tools, and customer support.

From time-to-time our customers and prospective customers seek us to support sole source requirements.   Although those requirements can vary in various jurisdictions, generally those requirements are that a good/service can be sole source if it meets the following criteria: (i) is essential or critical to a department/program to complete its work, (ii) has unique feature, capability, characteristic that is essential or critical to a department/program to complete its work, and (iii) is available from only one vendor.

As evidenced by the attributes above, we strongly believe that WebAdMIT for AMCAS is a sole source provider for educational institutions seeking a customizable, one-of-a- kind, cost-effective advanced analytics solution that identifies adult learners for their campus. We believe the WebAdMIT for AMCAS is the only known source for these types of enrollment matters.

Steve Goldbeck, Liaison International
