Subject: Baxter ABACUS Software and EXACTAMIX Compounder

Dear Customer,

This correspondence is provided for additional detail regarding the complimentary support between ABACUS software and the EXACTAMIX compounder. ABACUS is a unique software developed specifically to augment pharmaceutical admixing and nutrition compounding on the EXACTAMIX compounder. Originally developed by Baxa, both the EXACTAMIX compounding system and the ABACUS software were acquired by Baxter in 2011. There have been a number of revisions to the ABACUS software since its launch, with v3.2 being the current version. Development activities are underway to release v3.3 at the end of 2018.

The ABACUS software is used by clinicians to build/submit prescription admixtures that are focused on the needs of a single unique patient. These orders are then submitted to the hospital pharmacy where they are presented to the EXACTAMIX compounder for automatic filling. The collaboration of ABACUS and EXACTAMIX has been fulfilling pharmacy admixture requirements for over 12-years and both are available exclusively from Baxter Healthcare Corporation.

If you have additional questions, please contact your local Baxter sales/pharmacy representative.

Sincerely,

A handwritten signature in black ink, appearing to read "Gordon Drewes".
