

February 11, 2019

To Whom It May Concern:

This letter is to certify that Virtual Pediatric Systems, LLC ("VPS") is the sole source for providing pediatric critical data inclusive of the entire patient population of the PICU. The function of VPS is to improve critical care quality and outcomes for all children through collaborative high-quality data management and actionable comparative reports for clinicians and other health care leaders. VPS supports clinical research and develops clinical protocols applicable to pediatric critical quality assurance measures and educational tools derived from this research and widely disseminates the resulting information to pediatricians throughout the United States and participating International units.

The clinical and business objectives met through VPS are to acquire high-quality data and use information technologies, software products and services to support pediatric critical care via data quality analysis. Such data analysis aids in improving quality by disseminating outcomes based on supporting common needs such as publication, education, research, operations, patient treatment, data collection and validation, data management, and analysis. In addition, VPS may include ancillary support for health care providers through the provision of the following services:

- Research study design and coordination
- Facilitation of focus groups and meetings for collaboration
- Develop and disseminate quality measures and best practices

VPS is a proprietary not-for-profit company that is the sole provider of the application and reports it provides. There are no other companies that provide the same product or services as VPS.

Please feel free to contact me at 323-361-5155 or at breisner@myvps.org if I can be of any further assistance.

Sincerely,

Brian Reisner
