

SKID-STEER FORESTRY HEADS

SHOW YOUR TEETH.

THERE'S NOTHING BETTER.

*At Diamond Mowers, we build the best. Period. And we do it all in the USA. No wonder our heavy-duty equipment is the toughest, safest, and most reliable in the business. Demand Better. **DEMAND DIAMOND.***

READY TO WORK

You can't wait to get our 60" Forestry Head into the field, so it comes already equipped with hoses and half-inch couplers. It can effectively mulch trees with diameters of up to 6" in seconds. Even trees over 14" don't stand a chance.

SHIELDS UP. OR DOWN. YOUR CALL.

Diamond's Forestry Head comes with a fully adjustable deflector shield with three different positions. When shield is down, it's less likely to throw material and easier to control where the exhaust is distributed. As you raise the shield, the head becomes more productive and able to process the material more quickly. It's your debris. Put it wherever you want.

SKID-STEER FORESTRY HEADS

TEETH THAT WILL MAKE YOU SMILE.

Diamond's Forestry Heads utilize just one style of tooth for simple care and maintenance. Tooth holders are precision-located by machined holes for balance, and easy location for tooth replacement.

Each tooth can be easily sharpened for more efficient cutting and higher production. You can even extend the lifespan and improve operational costs by rotating teeth.

THE DIAMOND SPINDLE

Our proven Diamond Spindle comes with a replaceable splined insert and self-adjusting straight roller bearings. Unlike most competitors' heads—which are permanently affixed to the spindle—Diamond's spindle features 6 bolts that make disc removal easy, and servicing hassle-free.

BIG JOBS GO DOWN EASY

Fixed teeth on the inside of the unit shell mulch material as the dish carries it through. And our patented planer knives in the center of the dish ensure that the entire dish can be used to mulch, eliminating the dead zone found on comparable equipment.

The Diamond Skid-Steer Forestry Head comes with two different chutes. One chute is designed for straight stemmed hardwoods with a ramp that helps pull material already on the ground.

Hardwood Chute

Cedar Tree Chute

The other chute is designed specifically for cedar trees and similarly bushy material with a larger throat to easily feed the material.

BEAT THE DRUM

When you compare the two, Diamond's Forestry Head will beat a drum style head every time.

	DRUM STYLE HEAD	DIAMOND SKID-STEER FORESTRY HEAD
DEBRIS	Throws debris back at machine.	Throws material away from machine - Safer for operators. Easier on the gear.
MATERIAL SIZE	Produces sawdust chips that clog filters and coolers.	Produces material approximately 2" in diameter - Quick decomposition. No clogging.
HORSEPOWER	Limited to hydraulic horsepower of the machine.	Disc design creates more power using inertia built up in the dish - Quickly gather and process trees.
GROUND LEVEL	Stops at ground level, leaving a stump.	Disc style allows you to cut below ground level - Try that with a drum.
PULLEYS vs. SPINDLE	Uses pulleys and belts with multiple failure points.	Our drive spindle is simple and direct - With millions of hours of accumulated time on this spindle.

DIAMOND SKID-STEER FORESTRY HEAD SPECS:

Product	Material	Head Weight	Operating Requirements
60" Skid-Steer Forestry Head	Cuts up to 14" material Mulches up to 6" material	2,240 lbs.	32 - 40 GPM

AMERICAN PROUD

For over four decades Diamond Mowers has built and sold only the toughest, smartest, most reliable heavy-duty equipment. And we do it all right here, in the United States of America. Demand the Best. Demand Diamond.
