Art Systems Catalog

Thank you for taking time to review Sheldon Laboratory System's art system catalog. This catalog will give you some insight into the capabilities, resources and services offered by Sheldon. As the industry's premier supplier of science, art, life science, biology, chemistry, and physics casework as well as specialty products, our mission is simple:

Provide the most reliable AND innovative products on time and complete... every time.

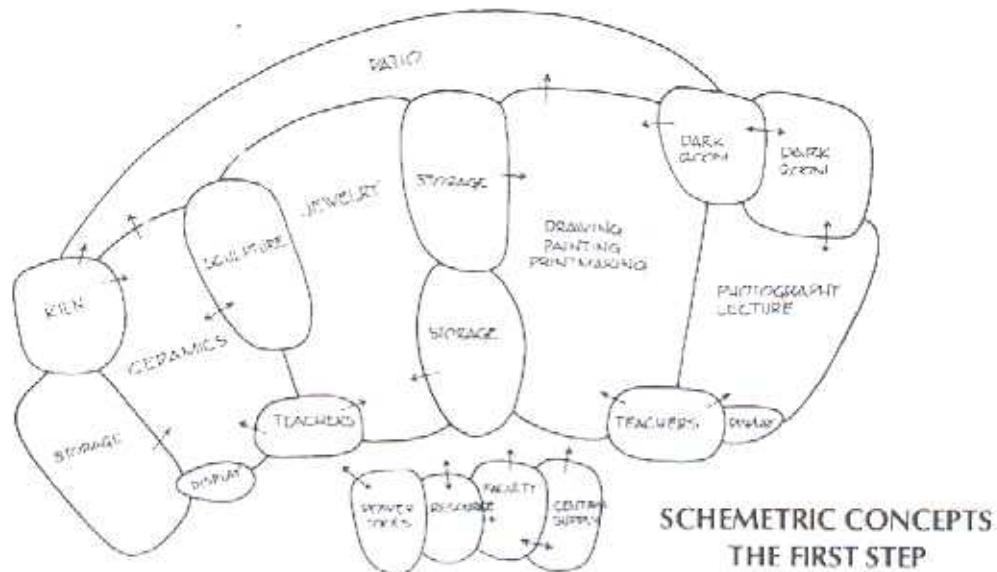

Our team is passionate about providing only the best quality and most innovative products as well as the best service in the industry. At the same time, we strive to be the easiest company with which to do business.

Our company has a rich tradition of listening to educators, architects and end-users to ensure we provide environments that make the important job of teaching sciences easier. Our 100-plus-year history includes the creation of many unique and innovative products, and we are committed now, more than ever, to new product development.

We understand that building a school laboratory is not just a matter of placing an order... but a science in itself! Our highly experienced team can be a tremendous aid to you throughout the entire lab-planning process.

We look forward to being your casework supplier of choice and thank you for reviewing this catalog. We encourage you to contact one of our sales managers to learn more about the many products and services we provide.

FACILITY PLANNING

Art Education Today and Tomorrow

From a few applied art courses, teaching floral painting and some portrait work, art education has moved far in the past 100 years. From being taught by one teacher with little training in one room with little equipment, art education has grown across the nation to an estimated 50,000 teachers at all levels of education. It has grown in both numbers and scope of program. This broadening from drawing and painting now includes print making, ceramics, jewelry, all forms of crafts such as films, photography, fashion design, industrial design, computing graphics, animation, and on and on.

Junior and senior high schools that in the 1930s, 40s, and 50s had one all-purpose art room, now include a suite of art studio rooms. Each is designed for specialized art courses.

Elementary schools in which art was taught on Friday afternoons by the classroom teacher in hundreds and thousands of schools, now have full time elementary art teachers who are teaching in specially designed art studios. Facilities at these grade levels are comparable to the art studios for junior and senior high schools.

Career opportunities in the arts have multiplied as fast as the number of teachers and programs. The National Art Education Association (NAEA) focused much of its energy during recent years on the area of career opportunities for young people, and to alerting teachers, administrators, parents and students of over 900 opportunities available in the areas of art and art related fields.

The plans and means for implementing art programs presented in this book reflect that growth and interest on the part of students as well as the support of school boards, administrators and parents in the implementation.

Current Status and Enrollment

Approximately 50 percent of the students at the junior high level in our nation are enrolled, or will enroll, in art during their junior high or middle school education. In many middle schools, art is required for at least one semester, and often for one year. Whether required or elective, enrollment in art courses seems to be consistent, with approximately 50 percent participating. Ten years ago, surveys made by NAEA indicated that something less than 10 percent of the senior high students in the nation were enrolled in Art. A current survey conducted by Sheldon Laboratory Systems with cooperation of NAEA, indicates that between 23 percent and 27 percent of all high school students are currently enrolled in Art. The facilities described herein reflect enrollment trends, and the best possible projections indicate that these figures will maintain themselves, even though there is not an increase in the school enrollment.

The facilities illustrated and described in these pages should meet the needs of the students for years to come, and could be easily converted should modifications be necessary in program or facility. All have set areas and adequate storage to house expanded or new programs, since careful consideration has been given to future flexibility.

FACILITIES PLANNING

Who Enrolls in Art and Why

The largest use of the art facilities is, obviously, the student population. Adult education provides the next, and this is a growing group. Active and retired adults, summer programs for gifted and talented and career oriented enrichment programs for students also create greater usage of the facilities. Our schools throughout the nation are being used as year around learning centers by day and evening, and better facilities are needed. The closer school art studios are to areas in which adults and students live, the more use will be made of them.

Current and future energy problems face the nation. If school facilities fill the local needs adequately, we will save many dollars not only in energy, but in the use over and above the dollars invested. People are entering Art in all areas of art education because they want to learn about art. There is an oncoming attitude about art in the nation. It's something people feel they should know. Most educators now call art basic to well rounded knowledge. People also want to know about art history and our culture - future and past. They want to learn something special: how to make a pot, how to do photography, how to make jewelry, how to paint, how to work with materials, build a sculpture, etc. Research indicates that visual learning is a most important part of any child's or adult's education.

What It Takes To Provide For Art Education

The space in which teaching takes place must be large. Classes, although too large, may run to 32, with sometimes 6 to 7 or even 8 classes per day. These rooms must have secured in-room storage, adequate large sinks, and good lighting, including the ability to show slides during the day and evening as well. While using films, the sound levels must be controlled. Controlled ventilation must remove fumes, making the rooms safe and accessible to special children and adults. People confined to wheel chairs must have easy access to the facilities. A resource center is needed within the art studios. Art rooms at all three levels - elementary, junior and senior high school - need north light and access to adjacent patios. If there are three or four art studios in a school, they must be clustered so that teachers can team teach. A teacher's planning area encourages teachers to work together. The resource center need not be as large as the school's central media, or library center, but does need to be large enough to house books, slides and prints in large numbers so that both students and adult groups working in the facilities are able to easily select materials they need for specific problems they are handling in Art.

Carefully prepared Facts and Figures to help facility planners are in this book. They are based on the recent survey Sheldon conducted to help them make the contents of this book "Educationally Oriented". By using this information at the earliest start of planning art facilities, art educators will be helping themselves to obtain teacher-student efficiencies for the benefits of all for many years ahead. The suggested art studio plans included in this book can be altered to your educational specifications and student work loads. Room sizes do vary, but square footage must be comparable if the art education activities are to be administered effectively. Sheldon Laboratory Systems has an excellent planning department. Study the Facts and Figures Data in this book and prepare your own data of your educational requirements. Send this information along with preliminary drawings of your art department. Without obligation your facility planning information will be interpreted into procurement drawings of your actual rooms. Budget type cost estimates and detailed equipment specifications will, at your request, be provided.

FACTS & FIGURES

Essential Data for Planning Art Studios for Elementary Schools — Middle Schools Senior High Schools — Community Colleges

Art Rooms

The Art Facility is a workroom and a laboratory. It is by nature a messy, dirty, noisy area and should be designed to fit its function. The physical space should be self-contained and securable, requiring cleanable type floors and maintainable walls for display and fixtures.

The class size is generally 24-32. Art activities covered in the art room are drawing, painting, printmaking, ceramics, sculpture, batik, photography, jewelry, wood and paper constructions, weaving, stitchery, art appreciation and display.

Art Studios must be based on school enrollment.

No. of Studios	No. of Students	Up to 500	1000	1500	2000 up
This "rule of thumb" applies to all schools.		1	2	3 to 4	5 or more

FACTS & FIGURES

The facilities and equipment needs are the same for a small school with one "all purpose" room as they are for the large school having 5 or more studios. Only the quantities of space and equipment vary. The educational opportunities remain the same.

Example: The small school may have only one class in pottery making; whereas, the large school may have 6 classes, using an entire room for ceramics.

Both schools will need for teaching ceramics:

A Kiln Room,
Potter's Wheels,
Kilns,
Pug Mill,

Sinks with plaster traps,
Student Project Storage,
Wedging Table,
Glazing Facilities.

Both schools will require comparable lists of equipment for drawing, painting, printmaking, photography including darkroom, sculpture, jewelry, and textiles. See the *Educationally Oriented[®]* room layouts for art studios for various size schools. These are in the pocket on the inside of the back cover of this book. An important consideration is to plan for growth, particularly in the all-purpose art room. As the room becomes fully scheduled for all art activities, student project storage must be planned at the start to allow for this growth.

Enrollment determines the number of specialized studios. In large schools it becomes easier to separate the areas (drawing, painting, ceramics, sculpture, jewelry, etc.), by their special equipment, ventilating, and cleaning demands.

Location of art studios should be on the north side of the building for indirect natural lighting. Ground floor level is needed for delivery of heavy supplies, equipment, and transporting finished art work. An outside exit is needed. This can be to a patio, and double doors are preferable.

A patio area adjacent to the art department should be provided for large sculpture and clay work, and for noisy work. Water faucet with antifreeze shut off is required for general work and clean up. Weather approved electrical outlets are needed on the patio.

The art studio should have provisions for darkening the room for showing slides, films, and spot lighting still life props.

Proper artificial and natural lighting is essential for true color presentations for drawing, painting, printmaking, dyes, glaze samples, etc.

The ventilating system should handle fumes, odors, and dust peculiar to these particular areas. Health and safety standards should be determined and met. Odors range from turpentine, to lacquer thinners, to acids, to toxic markers, to gases from melted waxes, etc. Special areas such as the kiln room, jewelry bench, pug mill, burn-out kilns, and acid areas require additional specific ventilation.

Electric outlets should be supplied frequently throughout the art rooms to avoid the use of extension cords. The use of unsightly drop cord type outlets is minimized when Student Work Towers are strategically located in the room. These towers can be furnished with strips of plug mold outlets on the top rails, connected to junction box in the floor. All electrical outlets need to be "ground fault protected" for safety.

Equipment manufacturer's specific electric requirements for kilns and burn-out station should be known and properly provided. Separate circuits are required for potter's wheels.

Floors in the art room should be of sealed concrete for durability and ease of cleaning. Floors should have a gradual slope to a long, trough-type floor drain, complete with a plaster clay trap which can easily be cleaned. The drain should be covered by a metal grate. Means should be provided to hose the floor down in all dirty areas and squeegeed into the drain.

Regardless of the enrollment, the following is a list of facilities, equipment, and space requirements applicable to all art education departments. The student load must be used to establish quantities.

STUDIO SPACE

This is the actual working area to be taken by students, tables, seating, student centers, project stations, and counters. This does not include materials storage room, teacher planning station, the darkroom, nor the kiln room. Allow 55 square feet per student. For 30 students, 1,650 square feet are needed.

Items required in the Studio Space:

1. Student 2-dimensional work-in-progress storage. Space is conserved by installing units designed for this intended purpose.
2. Student 3-dimensional work-in-progress storage. Items selected from within the book must accommodate pottery, sculpture, weaving, rug hooking, batiks, macrame, jewelry, etc.
3. Student work and clean-up sinks. Sinks should be far apart to permit good traffic flow at clean-up time. Several hot and cold water faucets are desirable at each sink. These sinks require plaster traps. One clean-up sink for every 12 students is minimum.
4. A sturdy grid system near the ceiling, or off Student Work Tower and EC support rails, provides for hanging mobiles, large macramés, weavings, still life drapery, props, batiks, sculptures, etc. Wires should be specified to be of proper strength.

FACTS & FIGURES

for the intended hanging loads. The grids should cover the ceiling of the display areas in approximately three-foot-square grid units.

5. Display panels for displaying finished 2-dimensional work. Spot lighting from a track is desirable. The tackboard area should be a minimum of 32 square feet.

6. Track spotlighting is needed throughout the studio space for highlighting still life displays, models, and student value studies at the drawing tables.

7. The area for the pug mill needs to be 8'-0" x 3'-0" wide, and a hooded exhaust fan above is required for dust removal.

8. The sculpture and wedging station can be combined in a single item conserving space. Storage space is needed for chemical storage.

9. A clay slab roller will require 18 square feet of floor space (6' x 3').

10. Potter's wheels. Allow 15 square feet of floor space, including working space, for each potter's wheel. Determine that adequate electric circuits are available. Electric cords should be off the floor where clay and water are spilled.

11. Glazing spray booth requires proper lighting, exhaust fan, ventilation hood, and a turntable. Air compressor or piped in air is required. Also, electric service to operate a spray gun should be available as a part of the booth, or adjacent to it.

12. A large buffer/grinder on a stand, or bench, with good lighting requires about 4 square feet plus 4 square feet for the operator.

13. Glazing buckets and clay carts need a home base and need to be of 10 to 12 gallon capacity. They need to have heavy duty bases having hard rubber casters.

14. The soldering bench for jewelry requires individual soldering stations with a fire resistant divider. Each station needs approximately 30" x 24" working space. The working surface should be of hard fire brick laid in metal frame or high density asbestos board 1-1/4" thick. Individual pressure regulator valves for gas and oxygen are required at each work station.

15. Bottles and dishes for acids used to clean metals before soldering should be housed in a locked screen cage.

16. The gas supply in the room should be piped to the locations indicated on floor plans. Small individual tanks are not satisfactory.

17. Special ventilation is required above the soldering, welding, casting and burn-out areas for fume and soot removal.

18. Centrifugal casting must have the unit safely anchored. It should be in a corner. Allow 9 square feet for this unit. Make certain that the centrifugal caster that you purchase will fit in the well.

19. The electric burn-out kilns, adjacent to the ventilating hood, require an area of 16" x 30", or 7-1/2 square feet. The base and wall should be of fireproof material.

20. Provide a glass display case for displaying finished work.

21. Student work tables must be very sturdy with quality heavy working surfaces capable to serve many uses.

22. Electric pottery kilns, jewelry burn-out kilns, enameling kilns should be selected before the building is started in order that proper capacity electric services can be brought to the proper places within the studios.

23. Printing press for printmaking requires 3' x 5' floor space.

24. Drying rack for wet 2-D projects require mesh shelves for air circulation.

25. Wood and plastic sculpture and jewelry require a band saw, and needs 9 square feet of space.

26. Provide eight potter's wheels for school with up to 1000 students, ten for 1500 students, and twelve for 2000 students.

27. A belt sander for sculpture and jewelry requires 6 square feet.

28. A flexible shaft grinder for sculpture requires 9 square feet.

29. A welding booth with oxygen/acetylene tanks on a portable cart uses 16 square feet for the booth and 6 square feet for tanks.

SECURITY

"Lock everything. Student work must be protected from damage by others; materials must be protected against thievery, etc." This is often a quick and expensive judgement. Evaluation is needed.

The insistence of total security diverts a high percent of the equipment dollar from more and better facilities. The problem warrants careful decision making at the time educational specifications are established. Many factors affect the degree of security justified. We suggest that each art education planner obtain from your Sheldon Representative budget estimates for security costs.

The cost must include more than the price of the lock itself. For example, between vertically stacked drawers a full panel must be installed, else by removing a locked top drawer, access is permitted to the locked drawer below and all security costs on that item are for naught. Tall doors to be secure require pull chains, or fixed catches, top and bottom, plus the lock. All locks require boring and installation. If students are to have access, all keys within a studio must be tagged and stored in key cabinets, as well as the instructor having a master key.

Cabinet locks often become a challenge to students' ingenuity. Students, intent on access, will succeed. Often the key opening is nervously stuffed and made inoperable, or, the key is broken off within the lock, or the key is lost. The investment in total security is then lost. Locks to the room itself, or to storage areas with the room, are practicable and desirable.

Our best advice is to consider the type of security required early in your educational specification and facility planning and keep the real cost of security in relation to the value.

FACTS & FIGURES

STORAGE

The storage space required for an Art Studio must be better developed and specialized than other disciplines within an educational facility. Extra large and deep storage for paper sheets and poster boards; extra security for jewelry parts, small drawers for brushes, paints, beads; ventilated storage and shelves for ceramics and photography; student work-in-progress for pottery, drawings, sculpture, weaving, etc. Careful consideration must be given or storage for some area's materials and work-in-progress may be overlooked.

Generally allow 200 square feet of floor space per 30 student Studios or 6.6 square feet per student. This storage should be divided between storage room and in-studio storage as educational requirements dictate. Refer to preceding subject areas for specific types and spaces necessary.

If items are to be stored in storage room, planning must include mobile transports to move the materials and work in-progress from the storage room to the studio and back. Mobile transports must be allotted storage space in both the store room and the Studio.

TEACHER PLANNING STATION

Each teacher should have 100 square feet of space. The following equipment is required: Counter top desk for each teacher; file cabinet, for filing purchase requisitions, records, memos, etc.; book shelves for art books and magazines, slide trays, and other resource material; lockable storage cabinet with adjustable shelves for finished student work to be graded, prints, posters, and personal property; telephone for emergency calls because of potentially dangerous equipment; and work table for matting and grading the art work.

KILN ROOM

This room requires 400 square feet.

A gas kiln $5\frac{1}{2} \times 7'$ requires 38 square feet plus a three-foot wide working border around the kiln total space, 150 square feet.

Electric kiln needs 45 square feet plus an 18" border around the kiln for radiant heat plus an additional 18" in front for loading and operation of the control switches. Total area needed is 45 square feet. Provide special wiring circuit to meet kiln manufacturer's requirements.

Gas supply and electric capacities to be determined when the space is planned. State and local codes must be met. Exhaust fan for heat build-up is required as well as air vents in the double doors or walls for fresh combustible air.

Provide adjustable metal shelves for glazeware pottery.

Metal storage cabinet for storing the kiln shelves, shelf supports, stilts, kiln wash, raku tongs, asbestos gloves, kiln door brick, etc. Raku kiln storage requires 9 square feet.

PHOTOGRAPHY

Both middle and secondary schools require photography. Only the secondary schools need color photography. Often photography can be combined with journalism and science programs; therefore, the location for a photography lab is very important. This area requires a minimum of 340 square feet - 100 square feet for film developing chemical mixing, 180 square feet for dark room printing and 60 square feet for finishing. Larger schools need additional 80 square feet for auxiliary dark room for color and sheet film work.

The enlarging area can only be used for photography processing. An adjoining area is needed for instruction, drymounting, negative spotting, print spotting, etc. Print drying racks require mesh shelves for air circulation.

Developing sinks to be type 316 stainless steel or molded structural polyester with all corners coved. Print washer to fit within sink. Print washer is best if circular to permit good print movement during washing. It should be at least 18 - 26 inches in diameter and 8 - 10 inches deep.

All drain piping in the Dark Room must be acid resisting. Light table top should be adjustable to different angles to a flat surface.

Darkroom needs a double light-safe door.

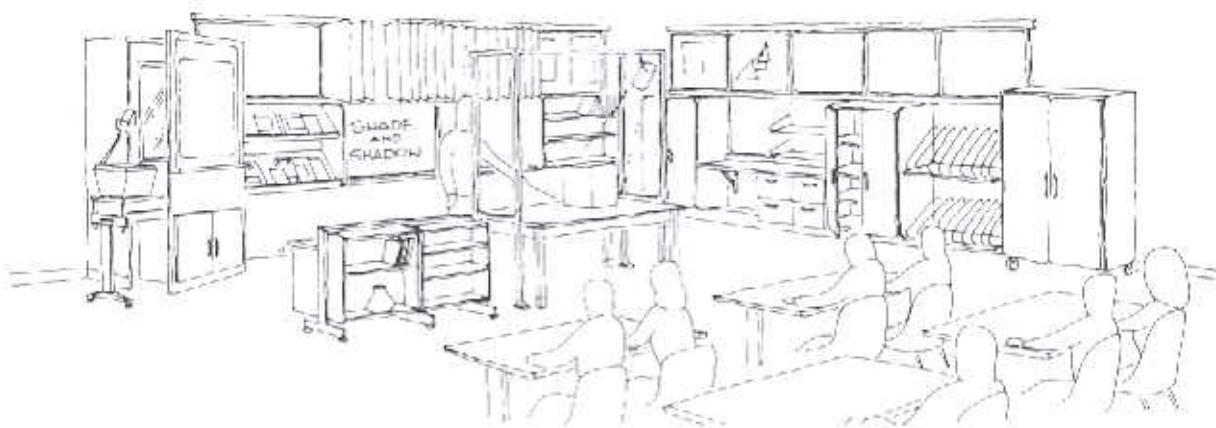

SAFETY

The importance of providing a safe environment cannot be overemphasized. Facility planners should, from the concept of a new building, consult with local, state, and federal agencies to become knowledgeable of all applicable safety requirements. The Art Studio has many activities taking place at the same time, and the need for safety precautions are special to each area. Activities can involve operating machinery; the handling of toxic and extremely high temperature materials; removing obnoxious and toxic fumes. Proper precautions must be established for each condition.

Educators employed by public Boards of Education must recognize their responsibility to the community. Safe working conditions are needed for all students, including adult and handicapped. The best protections against accidents and personal liability claims must be incorporated in the plans. Start by establishing proper space for each intended Art activity, then insist on adequate mechanical services for proper lighting, ventilating, floor drainage, etc. Finally, provide proper personal protection like eye glasses, safety covers, aprons, etc.

The art curriculum must include instruction on safety for all students as they start to work in each area.

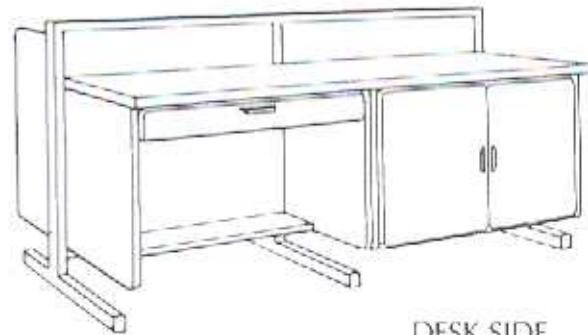

INSTRUCTIONAL CENTERS

Teachers Desk

21660 1220mmL 762mmW 737mmH
48" 30" 29"

Shelweld top; lock-on file drawer; cast aluminum foot with glides.

Bi-Level Project Center

19903 1372mmL 1372mmW 762mmH
54" 20" 30" Closed

Shelweld top; top adjustable from level sitting height to: (1) level standing height, or (2) sloping sitting height, or (3) sloping standing height. Solid hardwood legs and cast aluminum feet with glides. Bi-Levels are versatile, unique. Two students easily change the top height and position to accommodate the activity like level for drawing, writing or sloped for photography layups, tracing, painting. When space is limited, the Bi-Level serves many art education functions.

Art Horse

18950 711mmL 305mmW 838mmH
28" 12" 33"

Solid hardwood; ideal for sketching, drawing, painting. Easily carried to the patio for outdoors use. The wide feet increase stability over earlier designs.

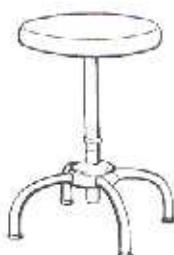

Art Bench

18955 432mmL 305mmW 432mmH
17" 12" 17"

Solid hardwood; provides student seating in keeping with the utility and functions necessary in the Art Studio. The shelf solves the problem of storing transient materials, otherwise placed in the way on the table top, or piled on the floor.

Art Stool

18958

Metal stool - 330mm (13") diameter seat, adjustable from 483mm to 686mm (19" to 27")

Adjustable Top Art Center

18296 1067mmL 533mmW 712mmH
42" 21" 29"

Plastic laminate top; top adjustable to almost vertical; front edge with sliding rail; solid hardwood legs and cast aluminum feet with glides. Can be fitted with tote tray or carryall guides.

Single Leg

56251 711mmH
28"

Solid hardwood; fitted with composition shoe.

Double Leg

56271 889mmH
35"

Same as single leg, except to have cross rails.

Kneespace Frame

54590 102mmL 559mmW 127mmH
40" 22" 5"

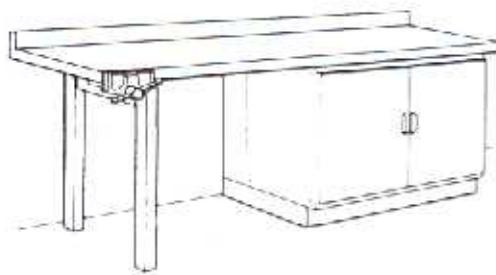

Solid hardwood; four sided full framed, corner braced construction. Other sizes available upon request.

54595 102mmL 559mmW 127mmH
40" 22" 5"

Same as #54590 except with drawer.

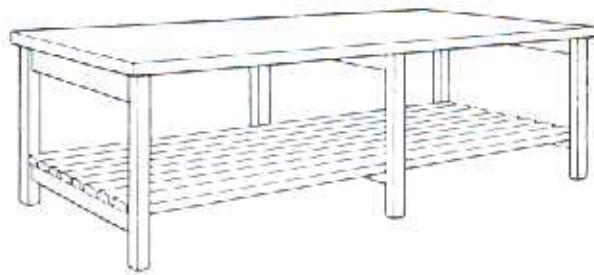

Drawer 450mm X 455mm X 65mm (17-5/8" X 18" X 2-5/8")

WORK BENCHES & ROLL PAPER STORAGE

Craft Project Bench

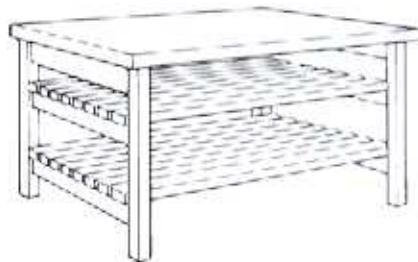

1893 1830mmL 610mmW 914mmH
72" 24" 36"
32mm (1-1/4") Shelweld top, #86435 medium duty clamp vise, #36010 bolt-reinforced cupboard cabinet.

Heavy Duty Project Benches

53570 2413mmL 1067mmW 914mmH
96" 42" 36"

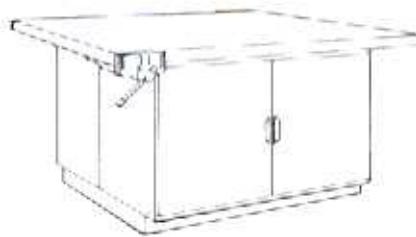

32mm (1-1/4") Shelweld top. Shelf provides storage of 2134mm to 762mm (84" to 30") flat stock. These benches are ideal for large project layout work, or for mounting vises, grinders, jg saws, drill press, etc.

Heavy Duty Project Benches

53560 1524mmL 1067mmW 914mmH
60" 42" 36"

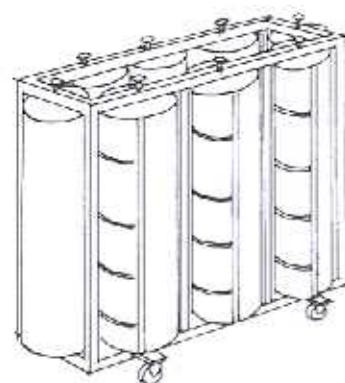

32mm (1-1/4") Shelweld top, solid hardwood, thru-bolted construction; two solid hardwood slatted shelves. Shelves provide storage for large quantities of 1219mm x 762mm (48" x 30") flat stock.

Craft Project Bench

77475 1220mmL 1220mmW 914mmH
48" 48" 36"

32mm (1-1/4") Shelweld top, #86435 medium duty clamp vise, #36010 bolt-reinforced cupboard cabinet.

Roll Paper Dispenser

46708 991mmL 559mmW 1168mmH
39" 22" 46"

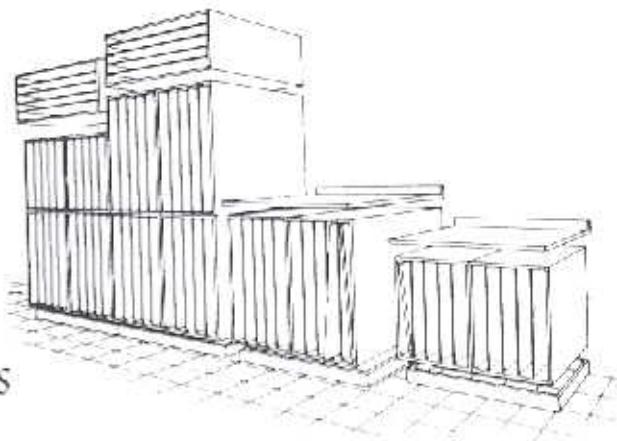

Metal frame; eight roll paper holders each with tear bar for paper rolls up to 914mm (36") wide; four swivel casters.

STACKABLES, 2-D DIVIDERS & DRYING RACKS

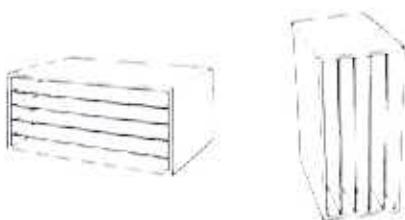

STACKABLES

Stackables are designed for specific 2D storage, and are essential in every Art Studio. You can "stack 'em" as best suits your needs. When used as "Horizontals" they are for paper storage, poster-board storage, including sheets up to 262mm x 1076mm (10" x 42"). When used as "Verticals" they are ideal for storing student

paintings in process and/or drawing boards. As illustrated, there are many ways to place Stackables in the Art Studio. Bolting Stackables to the top of tall standard storage cases is an excellent way to conserve space, yet give good access to stored materials. Each Stackable has five compartments.

Stackable

46620 813mmL
32" 534mmW
12" 534mmH
21"

Heavy duty all wood construction. Designed to accommodate materials up to 262mm to 508mm (10" to 20")

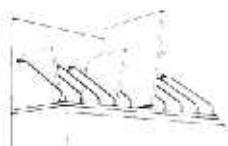

Stackable

46630 1067mmL
42" 287mmW
32" 534mmH
21"

Heavy duty all wood construction. Designed to accommodate materials up to 1016mm to 762mm (40" to 30")

2D DIVIDERS

2D Vertical Divider

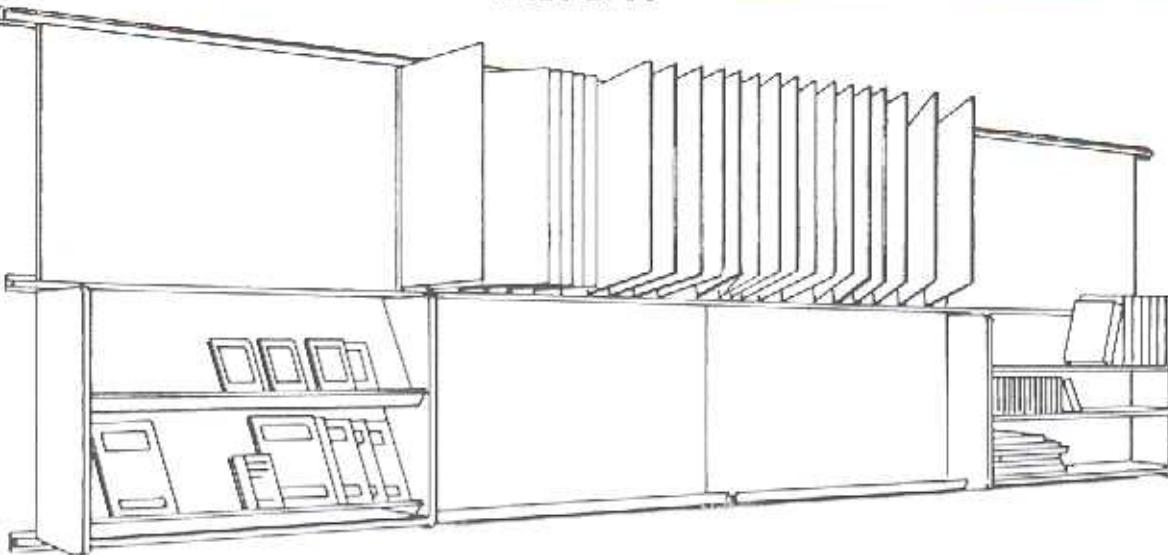

46640 840mmL
33" 483mmW
19" 711mmH
28"

Sheltex panel forming a 90° angle for mounting 13 metal dividers, set approximately 57mm (2-1/4") apart. The entire board is secured in rails and yet can be lifted out, carried to work areas. Tops of tall storage cabinets serve as ideal places to permanently locate dividers.

AWT 100-Shelf Portable Drying Rack

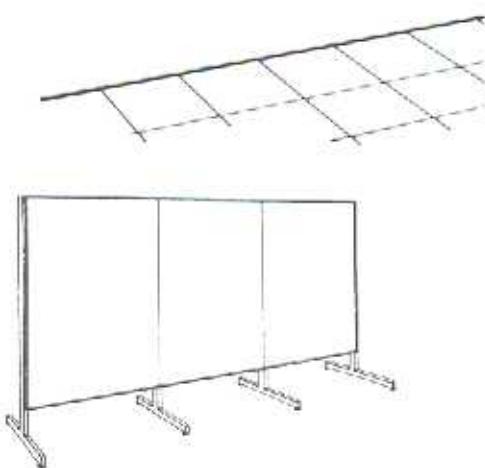

This is an all-welded-steel wire rack with gray enameled finish, mounted on 2" ball casters. Its mobility makes it ideal for use in schools, print and sign shops, art studios, or home hobby areas. It has 100 stationary shelves, size 10" x 18" (25 cm x 46 cm), 50 on each side, spaced 1" apart. Mesh size is 6" x 10" (15 cm x 25 cm). Up to 100 sheets of paper, cardboard, or plastic can be dried or stored on this unit. The base measures 19" x 22" (48 cm x 57 cm) unassembled. Shipping weight is 12 lbs.

DISPLAY

PICTURE HANGING DEVICES

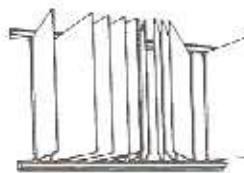

Complete Picture, Print, Panel Display System

Mural Display Station

DIP-1 3,124mmL 914mmW 1727mmH
123" 36" 68"

#7188-33 Mural Panels supported on one #EC 7203-44 and 2 #EC 7203-48 Relocatable Support Rails. Ideal for securing large 2D work material can be nailed, stapled, or taped to panel.

Hi-Density Display

DIP-2 1219mmL 762mmW 737mmH
40" 30" 29"

2D compact display assembly. One #7201-38 mounting rails; one #7201-11 support rails; fifty #7185-11 display panels; twenty-five #7186-00 hinged panel posts.

Spacer Rod

1290-18 adjusts from 457mm to 965mm (18" to 38")
1290-36 adjusts from 914mm to 1422mm (36" to 56")
Keeps the hanger rods from "pulling" together under weight of picture

Long Holder

3116-51
Supports the bottom and top edge of any mat or panel up to 10mm (3/8") thick

Twin Clips

3140-83
Cope the top edge of works up to 5mm (3/16") thick. Excellent for hanging works that need support at several locations on their top edge

Side Arm Holder

3116-02
In combination with Panel Holders, keeps large matted work from bowing

Level Hang Hook

3120-00
Used with two Hanger Rods, provides two point support for large framed works

Hanger Rod

1180-77
Fiberglass hanger rod 686mm (27") long, locks into outer "L" track, hooks, holders and clips attach to hanger rod to hold media to be displayed

Plain Rod

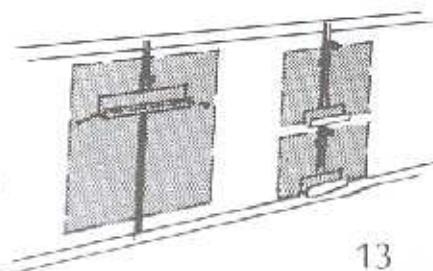

1130-27
Fiberglass rod 686mm (27") long, held on the support rail with a Dual Rod Holder and may extend both above and below rail. Two rods fully extended can hold several smaller works, one above the other. When used to hold one painting, print or panel, remains totally concealed when the length of rod(s) is not greater than the vertical dimension of the work

Dual Rod Holder

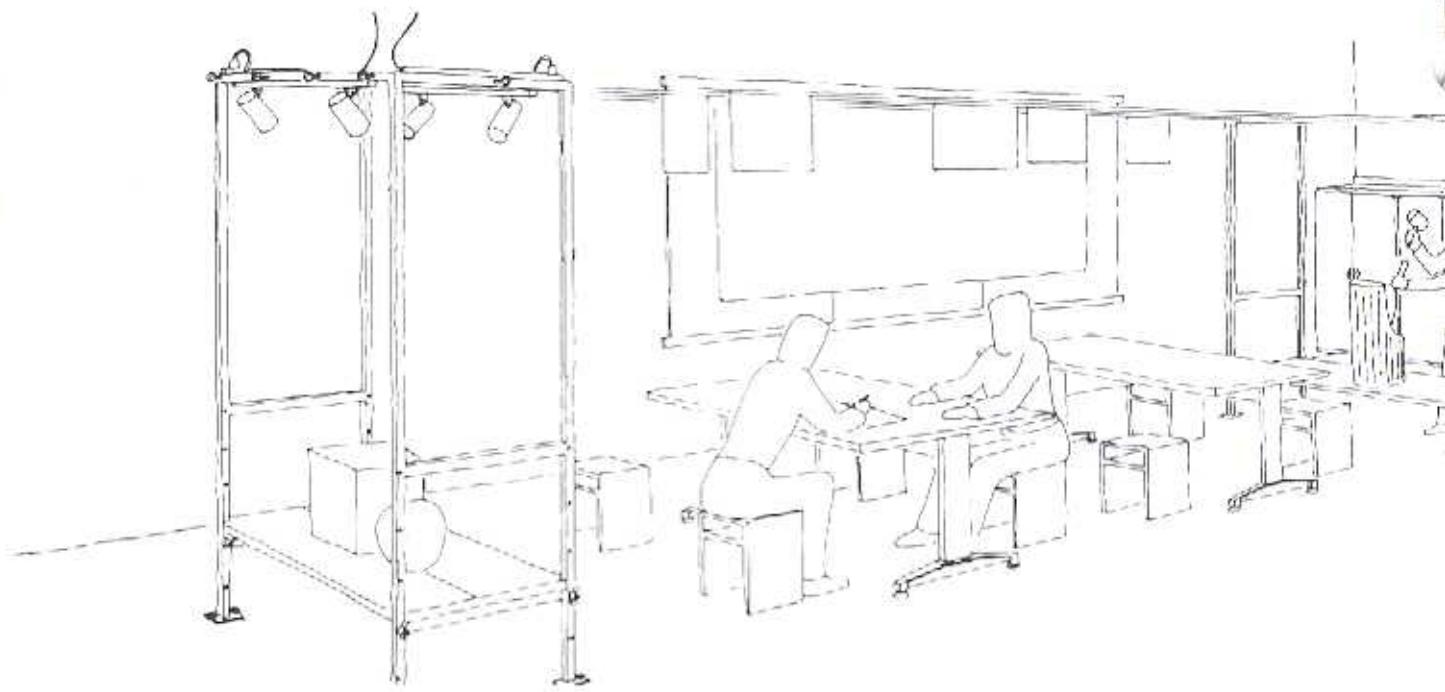

3444-00
Holds one or two plain rods. When rod extends at least 51mm (2") above support rail, the holder locks on the mat or panel also allows mat and panel to extend above support rail

Panel (Print) Holder

3320-12 Panel and mats up to 8mm (1/4") thick
3320-13 Panel and mats up to 10mm (3/8") thick
3320-14 Panel and mats up to 13mm (1/2") thick
3320-15 Panel and mats up to 16mm (5/8") thick
Supports the bottom and top edge of all sizes of matted prints, photos and long panels

STUDENT WORK TOWERS

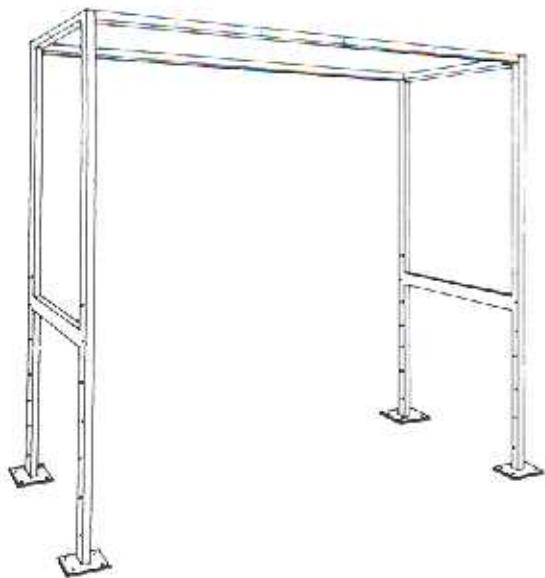

Student Work Towers Inspection of numerous recommended Art Studios established the need for a specialized work center that could serve universal purposes applicable to many art activities.

The Student Work Towers create multi-purpose work centers and bring a third dimension to the Art studio. Uniquely available Work Towers are secured to the floor, becoming a rigid stationary tower. Work Towers allow ceiling type art activities; can become a modeling platform; with track lights they permit casting sha-

dows on models; wood sculpture platform can be created. By using clamps, frames may be secured for weaving, looms, tapestry, sign boards, and mural panels. By locating two Towers in a Studio, properly spaced, tight wires may be strung between the Towers. 2D work, textiles, etc. can be hung to dry or to display. Electricity, supplied through power adapters eliminate unsightly ceiling drop cords.

Art Educators and students will discover other ingenious uses for these new concept Student Work Towers.

Student Work Tower

79900	2134mmL 84"	752mmW 30"	2134mmH 84"
-------	----------------	---------------	----------------

Heavy gauge, square tubular frame with feet for fastening to floor; bolt holes on 152mm (6") centers from 152mm to 1067mm (6" to 42") above the floor; top frame with four bolt holes on each side, one on each end, to accept accessory items.

Student Work Tower

79901 2134mmL 762mmW 2134mmH
 84" 30" 84"

Same as #79900, except with additional items: two #7266-40 tower track light systems; two #7266-44 Power adapters; four #7266-42 tower support rails; ten #7266-44 tower bolt hooks; two #7266-45 lower modular boards.

Tower Track Light Systems

7266-40 1829mmL 254mmW 254mmH
 72" 10" 10"

Two baffled R-40 light cylinders, 1829mm (72") long single circuit lighting track and 1219mm (48") cord.

Tower Light Cylinders

7266-41

Baffled R-40 spot light with T-bar mounting to light track.

Tower Support Rail

7266-42 762mmL 51mmW 51mmH
 30" 2" 2"

90° angle steel support rail, in-line couplers.

Tower Bolt Hook

7266-43

Locks into holes on top of Tower to accommodate tight wires. Tight wire can be strung between Towers or Tower to EC Support Rails.

Power Adapter

7266-44 762mmL 32mmW 25mmH
 30" 1-1/4" 1"

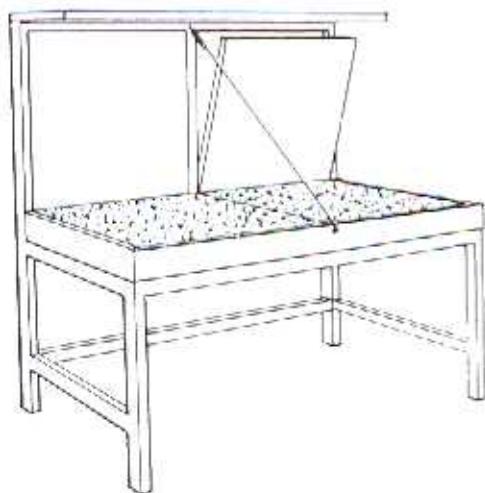

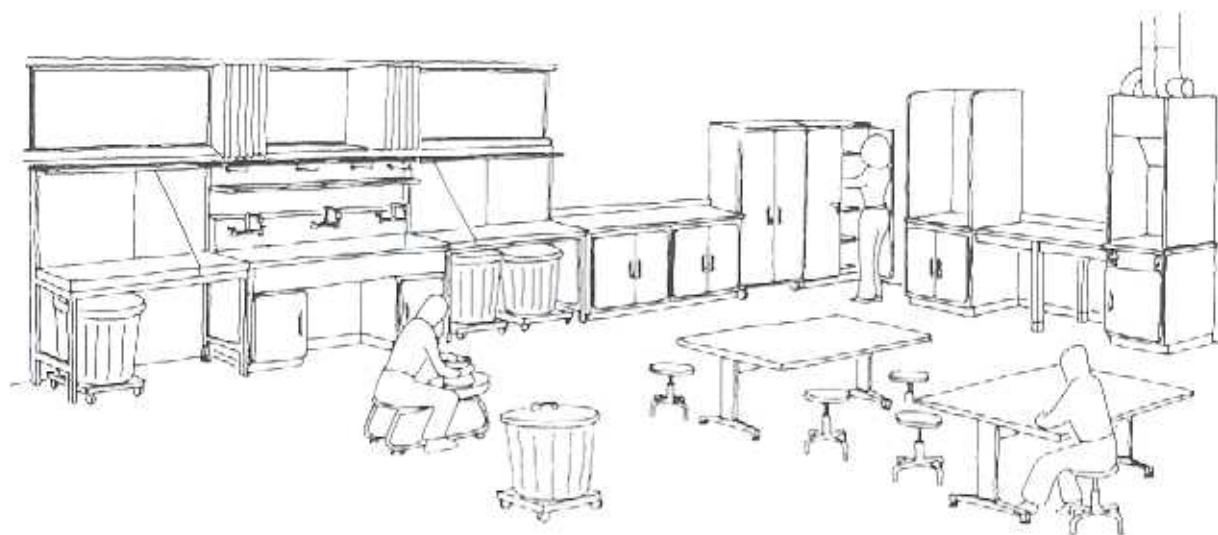

762mm (30") long, three outlet with cord.

Tower Modular Boards

7266-45 2134mmL 38mmW 32mmH
 84" 15" 1-1/4"

32mm (1-1/4") Shelweld Board with two end notches. Used in conjunction with tower support rails can be used at various heights from 152mm to 1067mm (6" to 42") above the floor.

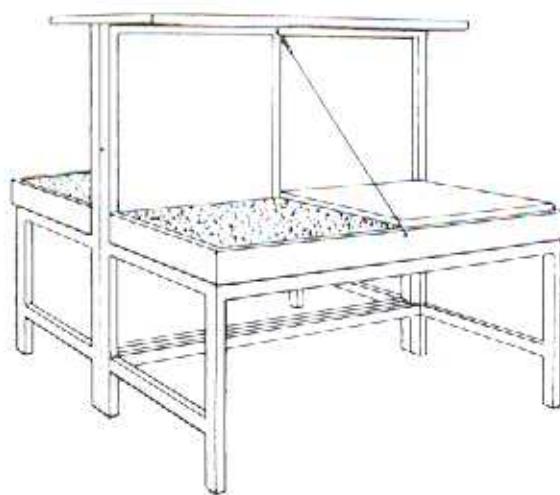

Wedging/Sculpture Station

26" 914mmH
36" to counter
1549mm
61" Back

1½" #Steel

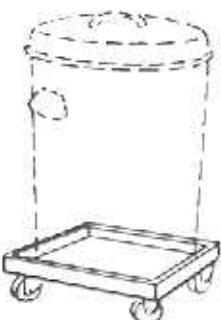

2 Student; **solid hardwood**, thru-bolted frame; top formed of heavy metal pan designed to contain smooth finished hard cement; stainless steel wire for cutting clay; drop down secondary top creates ideal surfaces for clay slab and clay sculpture work and also as backboard for wedging operations. Cement not included.

Wedging/Sculpture Station

79915 1219mmL
48" 1333mmW
51-1/2" 914mmH
36" to counter
1549mm
61" Back

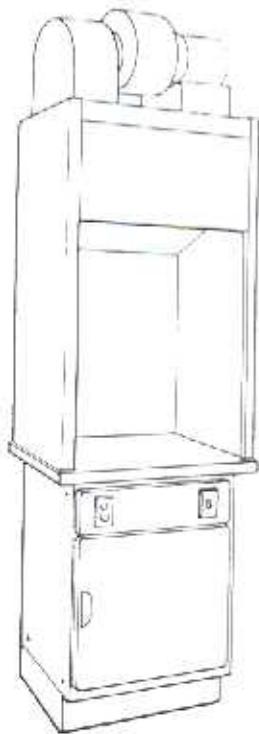

Same as #79910 except designed for four student use.

Glazing/Clay Materials Mobile Stand

79910 457mmL 457mmW 127mmH
18" 18" 5"

Welded steel frame; 19mm (3/4") thick solid bottom; four swivel casters. Designed to accept either glazing or clay material storage containers. Supports up to 227 kg (500 lbs.).

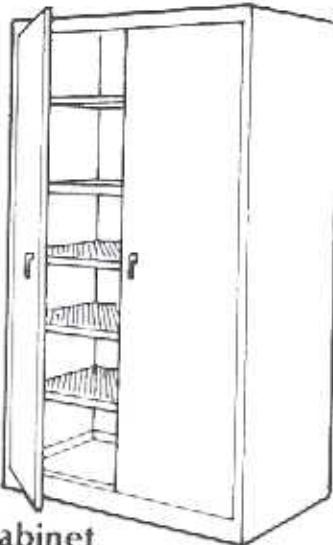

Spray Booth

79950 635mmL 610mmW 2089mmH
25" 24" 82-1/4"

Metal with baked on enamel finish superstructure, front opening 838mm (33") high; fan and light switch, vaporproof light, 152mm (6") exhaust fan with 1/8 H.P. motor; 110V AC electric receptacle in the cabinet front apron; 477350 base cabinet. Requires exhaust duct to the building exterior.

Ventilation is necessary for such operations when an air compressor or spray gun is used, when toxic materials are employed or when the volume of finish and hazards dictate a need for mechanical air exhaust.

Damp Cabinet

79920 914mmL 457mmW 2759mmH
36" 18" 81"

Heavy duty metal cabinet; doors completely incased in their own frame; three point latching; five adjustable perforated shelves; bottom is an inverted pan 25mm (1") deep, in which a layer of plastic or clay can be placed to absorb water for a damp box effect.

For storage of clay projects during the drying period, use metal shelving with expanded metal shelves as shown on page 27.

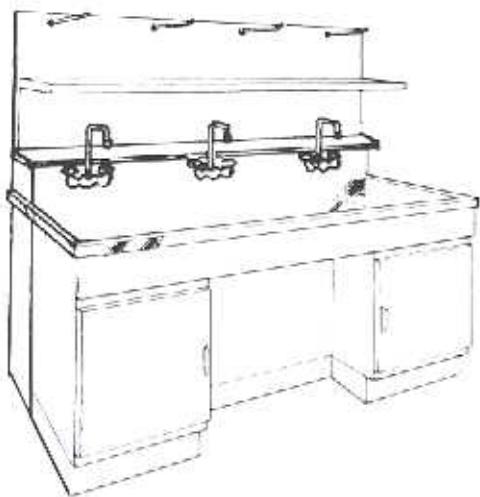

Glazing Booth

79940 1245mmL 610mmW 2102mmH
49" 24" 82-3/4"

This Glazing Booth has wide application in serving the finishing needs for Art. The superstructure is open full height of front and top. It is equipped with galvanized metal covered counter top working surface and interior liner 10" high. This superstructure may be easily lined with Kraft Paper or Homasote Board, providing an interior that can be quickly and inexpensively replaced when it becomes soiled and unattractive.

Finishing by blow tube, hand sprayer, or brush involves little finish being released to the room atmosphere, and does not require mechanical means of air exhaust. This assembly provides a roomy superstructure adequate to these techniques. This superstructure is also ideal as an area for spatter work with ink and toothbrush and other means.

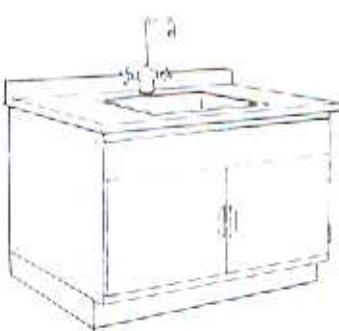

The base cabinet provides a cupboard with one adjustable shelf for storage of materials and equipment.

Wall Sink Center

76810 1880mmL 762mmW 1549mmH

Open-speed compartments in front with two solid surfaces to display, center section is closed. Three side drawers 42mm x 10mm x 50mm each, 30mm deep, 30mm high.

Roll Paper Storage

68051

47" L
21-5/8" D
82-11/16" H

Five shelves for cut stock up to 535mm x 970mm (21" x 38-1/2"). Paper holder for 910mm (36") roll paper. Fixed center shelf.

Wardrobe Case

65925

24" L
21-5/8" D
82-11/16" H

Provided with hot shelf and garment hanger with pull-out center.

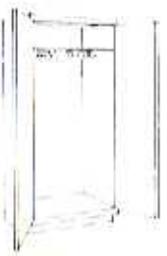

Open Storage Case

68111

1000mmL - 39-3/8"
550mmW - 21-5/8"
2100mmH - 82-3/4"

Two adjustable shelves, one fixed center shelf.

Smock-Apron Storage Case

68336

47" L
21-5/8" D
82-11/16" H

Two 24 hook pull out carriers.

Tray Drawer Case

69210

47" L
21-5/8" D
82-11/16" H

Unit comes complete with 36 model no. 69000 tote trays.

Project Materials Storage Case

69901

1000mmL - 39-3/8"
550mmW - 21-5/8"
2100mmH - 82-3/4"

12 tote trays #74272
29 compartments for horizontal storage compartments 60mm (2-3/8") high

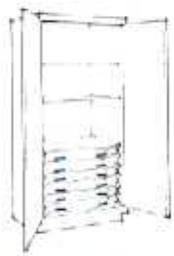

Cleaning Case

68328

24" L
21-5/8" D
82-11/16" H

Upper fixed shelf, six hooks for hanging brushes and other cleaning equipment; galvanized lined bottom and 152mm (6") high sides.

Flat Stock Storage

69666

47" L
21-5/8" D
82-11/16" H

Two adjustable shelves and one fixed shelf, six pull out shelves for easy access and storage of flat materials. Stores materials up to 432mm x 916mm x 140mm (17" x 36-1/16" x 5-1/2").

Instructor's Case

65928

47" L
21-5/8" D
82-11/16" H

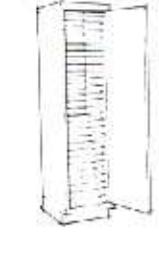

Cabinet includes two file drawers, three sloping display shelves, and a wardrobe compartment with clothes rod and fixed hot shelf.

Tote Tray Case

68246

48 tote trays #74272
48mm x 19mm x 11mm (19" x 7-1/2" x 4-1/4"); hinged doors

Hi-Density Horizontal Storage

68318

24" L
21-5/8" D
82-11/16"

29 individual compartments each 470mm x 330mm x 60mm (18-1/2" x 13" x 2-3/8").

Hi-Density Vertical Storage

68240

1000mmL - 39-3/8"
550mmW - 21-5/8"
2100mmH - 82-3/4"

75 individual compartments each 60mm x 482mm x 360mm (2-3/8" x 19" x 14").

General Storage Case

69211

47" L
21-5/8" D
82-11/16" H

All purpose unit is furnished with full height solid doors. Four adjustable shelves and one fixed center shelf are standard.

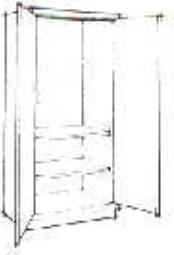

General Storage Case

68129

24" L
21-5/8" D
82-11/16" H

Two adjustable shelves and one fixed shelf.

Tool Storage

68271

47" L
21-5/8" D
82-11/16" H

Upper area has no back and 2 sides perforated lining for tool display and storage; lower area has two adjustable shelves, hinged doors.

SHELVING

20" 20" 56"

Galvanized lined bottom and 152mm (6") high sides; six hooks.

Open Storage

7126-16 1016mmH 482mmW 1422mmH
40" 19" 56"

Three adjustable shelves.

Open Storage

7126-11 508mmH 483mmW 1422mmH
20" 19" 56"

Three adjustable shelves.

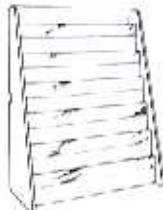

General Storage

7126-11 508mmH 508mmW 1422mmH
20" 20" 56"

Three adjustable shelves, hinged door.

7126-66 1016mmH 500mmW 1422mmH
40" 20" 56"

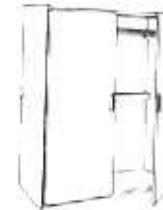

Three adjustable shelves, hinged door.

Magazine Display

7179-26 1016mmH
40" 1016mmW 56-78"

Shelving panel construction; steel shelving and clear plexiglass front retention panels; six display levels (229mm x 51mm (9" x 2')). May be used on support means or may stand free on floor.

Wardrobe Storage

7130-66 1016mmH 506mmW 1422mmH
40" 20" 56"

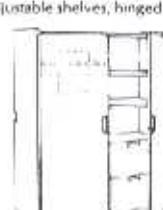

Fixed shelf; full length rod; hinged door.

Wardrobe Storage

7130-33 508mmH 508mmW 1422mmH
20" 20" 56"

Fixed shelf; full length rod; hinged door.

Instructor's Case

713-46 1016mmH 500mmW 1422mmH
40" 20" 56"

Left section with fixed shelf; full length rod; one mirror; hinged door; right section with two file drawers; each drawer accommodates standard file folders crosswise and legal files lengthwise; two adjustable shelves; hinged door; locks on doors.

Cubicle Case

7113-55 1016mmH 508mmW 1422mmH
40" 20" 56"

16 cubicles; nine to be 254mm x 305mm x 229mm (10" x 12" x 11") and six to be 279mm x 305mm x 229mm (11" x 12" x 11"); hinged doors.

Cubicle Case

7113-46 1016mmH 305mmW 1422mmH
40" 12" 56"

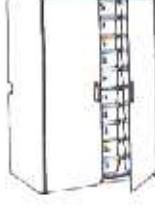

Same as #7113-55, except without doors.

Tote Tray Case

7116-60 1016mmH 463mmW 1422mmH
40" 14" 56"

60 (#74246) tote trays 438mm x 290mm x 49mm (17" x 11-1/2" x 1-1/2").

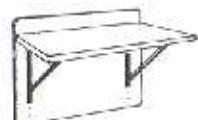

Tote Tray Case

7118-90 1016mmH 508mmW 1422mmH
40" 20" 56"

Same as 7116-60 except with hinged doors.

COUNTER

Adjustable Counter

7187-15 1016mmL 508mmW 711mmH
40" 20" 28"

Plastic laminate counter; adjustable in increments of 51mm (2").

7187-17 1524mmL 508mmW 711mmH
60" 20" 28"

Same as #7187-15.

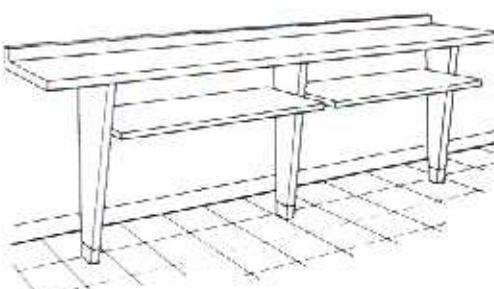

Plug-In Counter

7187-34 1016mmL 508mmW 25mmH
40" 20" 1"

Plastic laminate counter; locks into outer "C" track.

7187-36 1524mmL 508mmW 25mmH
60" 20" 1"

Same as #7187-34.

Wall Counter

71561 1016mmL 457mmW 914mmL
40" 10" 36" to counter

Plastic laminate counter with 51mm (2") high rear curb; shelf is 305mm (12") wide; solid hardwood uprights.

Wall Shelving

73180 1000mmL 305mmW 305mmH
39-3/8" 12" 12"

73190 1000mmL 457mmW 305mmH
39-3/8" 12" 12"

Plastic laminate counter with 51mm (2") high rear curb.

ACCESSORIES FOR ART STUDIOS FACILITIES

Key Case

24930 464mmL 57mmW 870mmH

22" 19-1/2" 7-1/4"

80000

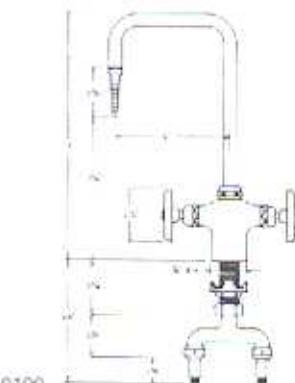

Single hot or cold water gooseneck fitting; for deck mounting.

Unicast

80022

Cold water service fixture; specially designed to withstand student abuse.

80100

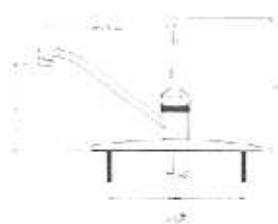

Hot and cold water gooseneck fitting; for deck mounting.

Plaster Trap

82275

Cast iron interceptor with removable perforated nickel screen basket, 216mm (8-1/2" diameter x 317mm (12-1/2").

80350

Swing spout hot and cold water fittings; single handle control; aerator; for deck mounting.

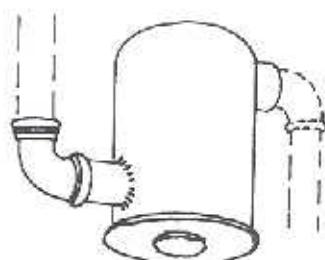

86240

Lock for frameless plate glass doors; this lock cannot be keyed with #86230.

86230

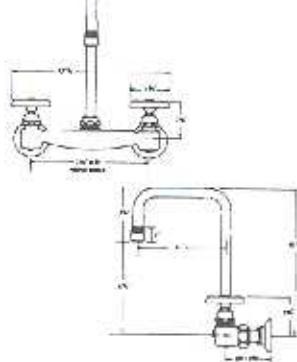

Door and drawer lock; may be individually keyed, keyed alike and master keyed.

Plaster Trap

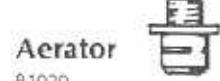

82270

Cast brass interceptor with removable perforated brass screen basket, 117mm (4-5/8") diameter x 165mm (6-1/2").

80300

Hot and cold water gooseneck fitting; for panel mounting.

81020

Threaded to fit all gooseneck fittings; shown.

86180

Solid brass padlock hasp.

ACCESSORIES CONTINUED

Safety Glasses Case

31170 760mmL 205mmW 914mmH
30" 8" 36"

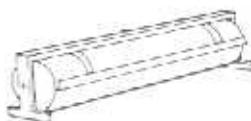

Steel cabinet; capacity for thirty-six pairs of safety glasses and eight pairs of goggles; automatic timer control, germicidal lamp, lock on door. Glasses and goggles not included.

Removable Bin

86555

Mesh bin; frame, metal top, for attachment to inside of cabinet door.

Roll Paper Dispenser

86660

Holder with tear off bar; accommodates roll paper up to 914mm (36") wide.

First Aid Case

66108 1000mL 400mmW 700mmH
39-3/8" 15-1/4" 30-1/2"

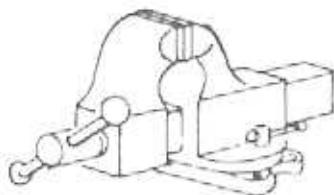

Doors of white plastic laminate with red cross symbols applied, two adjustable shelves.

Woodworker's Vise

86415

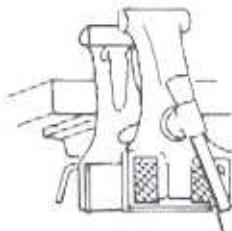

Medium duty clamp, jaws 76mm x 16.5mm (3" x 6 1/2"), opening to 178mm (7"); for deck mounting.

Machinist's Vise

86420

Heavy duty clamp, jaws 89mm (3-1/2"), opening to 127mm (5"), swivels full 180°; for deck mounting.

Combination Vise

86400

Equipped with woodworking and metal working jaws; either set of jaws may be swung into working position by loosening the locking lever and rotating vice a half turn.

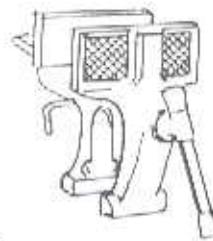

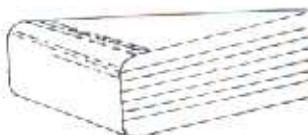

TABLE TOP AND COUNTER MATERIALS

Art Studio tops may be specified of the following materials and thicknesses. Use the code symbol

plus the catalog number to identify the top desired with the item.

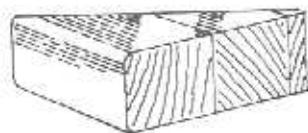

Shelweld Tops

Wood fiber compressed into hard surfaced sheets; finished in clear durable finish.
Code - SC - 32mm (1-1/4") thick.

Plastic Laminate Tops

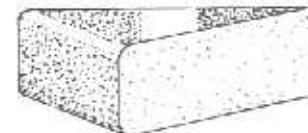

Composition core; counter edges are banded with same plastic laminate material as the top surface. Table tops are banded with "T" molding.
Code - PL - 32mm (1-1/4") thick.

Hardwood Maple Tops

Code - H - 32mm (1-1/4") thick.

Code - HH - 37mm (2-1/4") thick.

Sheldine Tops

The ultimate for heat resistance. They will stain, but structurally they remain good working surfaces.
Code - S - 32mm (1-1/4") thick.

Stainless Steel Tops

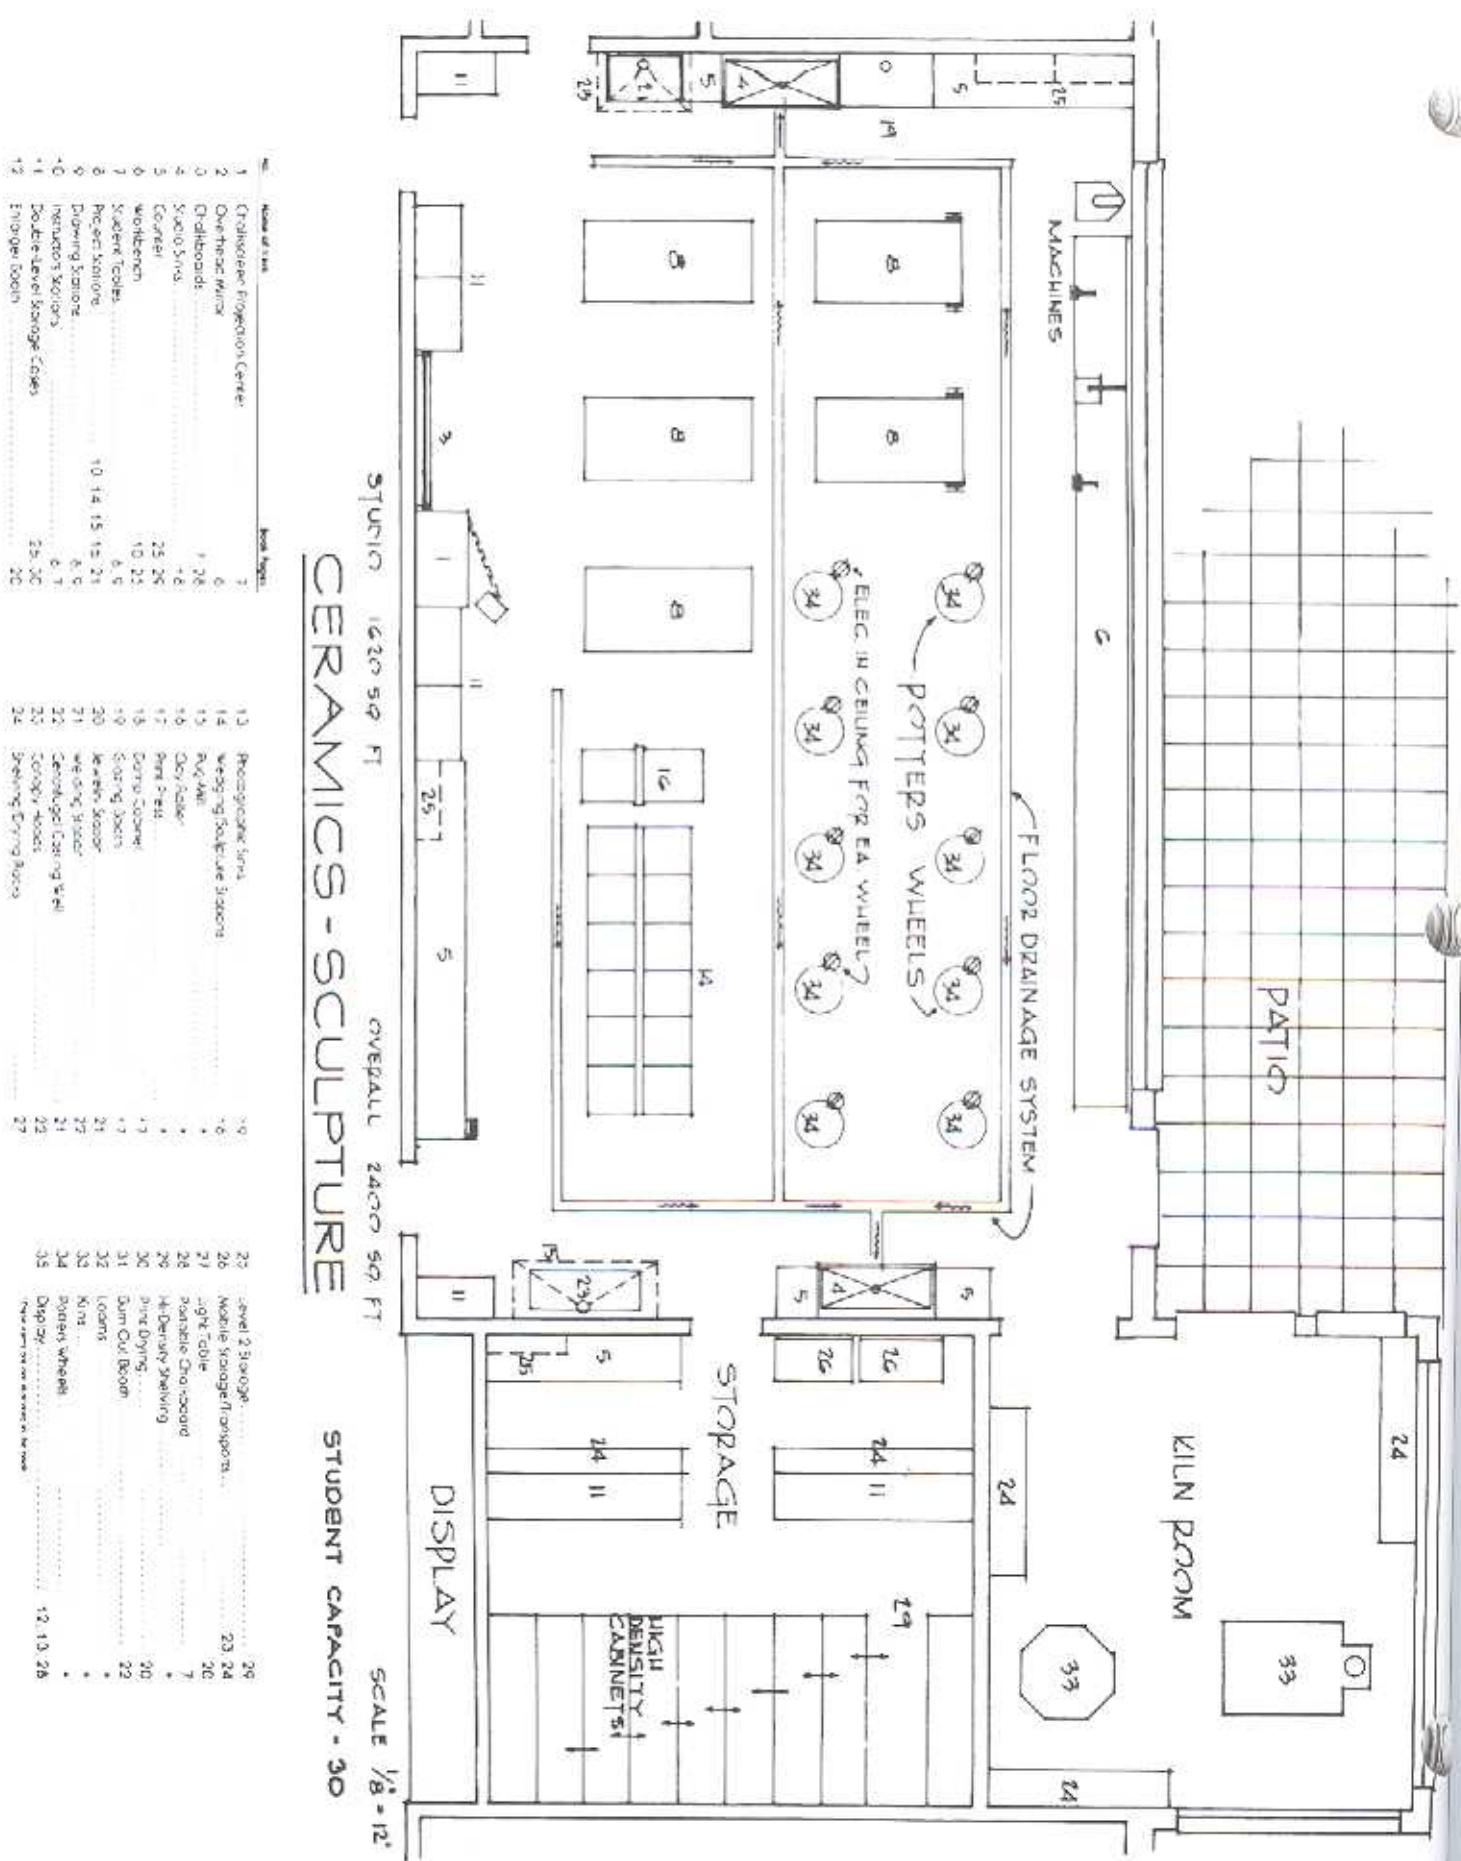

16GSS gauge (.0625) of type 302, 18-8 with No. 4 satin finish; dark room sink type 316.

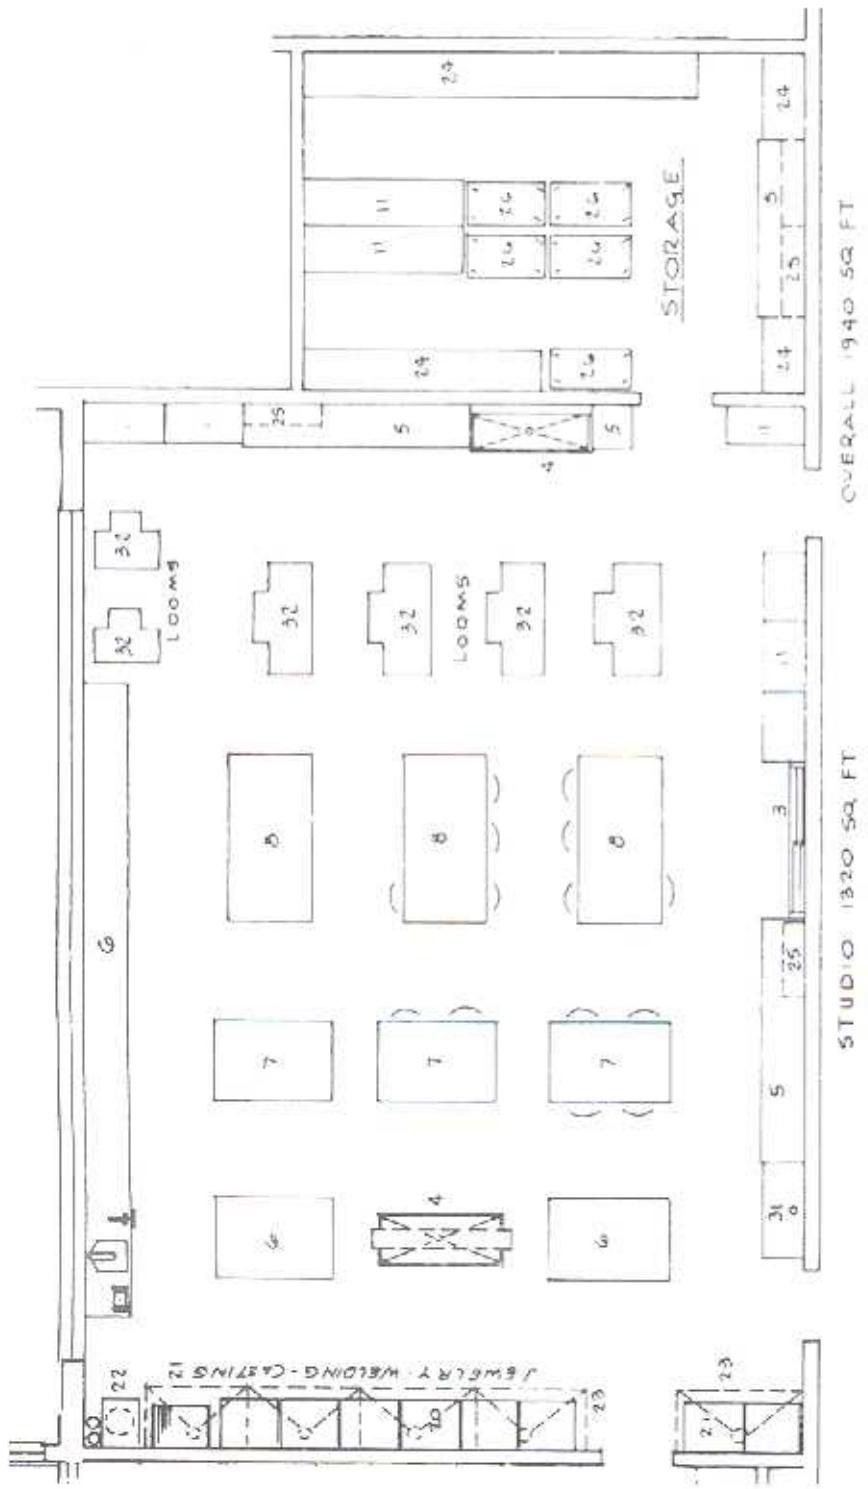

18-8 with No. 4 satin finish.

Code - CRM - 32mm (1-1/4") thick.
