

VERSA PRO™

Lightweight, high-performance
and dual-certified rescue wear

LION®
ready for action

Why VersaPro?

According to the NFPA, in 2013, fire departments in the U.S. responded to over 1.2 million fires. That may sound like a lot, but it's a mere 4% of the more than 31 million total calls that fire departments received. That's why LION introduced the VersaPro.

The VersaPro is the perfect garment for non-fire calls and to reduce wear and tear on structural turnout gear. This dual-certified, NFPA 1951 and 1977 garment offers more protection than a station uniform, but is less cumbersome than structural turnouts for non-structural calls. Its ground-breaking **Sigma™** fabric is soft, yet strong and durable.

VersaPro's Key Benefits & Features

DUAL-CERTIFIED:

NFPA 1951 (Technical Rescue) and
NFPA 1977 (Wildland Firefighting)

CUTTING-EDGE FABRIC:

The Sigma fabric is made up of 45% Meta-Aramid, 32% Lenzing FR®, 17% Polyamide and 6% Para-Aramid, offering the best combination of flash/thermal protection, durability, comfort, and appearance in a single-layer garment.

LIGHTWEIGHT & BREATHABLE:

Breathable (includes LION's patented Ventilated Trim™) and engineered to provide maximum protection without weighing you down. Provides great range of motion and flexibility when maneuvering in tight spaces.

MOISTURE-REPELLENT:

Treated with a durable water-repellent finish that helps keep you dry and comfortable while working.
