There are spaces on the form to describe all common features and finish options for specific tag areas or an entire order. A tag area can be as small as a worksurface and as big as an entire floor.  |
| <b>Placing a Manual Order</b>             | Complete an Order Cover Sheet with the information we need to fill your order. This is the most important step. If the Order Cover Sheet is not complete and correct, the order may be delayed.  |

## understanding panel walls

District Panels are available in three Panel Styles: Standard Panel Wall, Panel Wall with Inset Glass and Panel Wall with Accessory Beam. Each Panel Style is available in three Panel Profiles: Flush, Elevated and Convertible.

### panel profiles

- Flush, which provides privacy to the floor
- Elevated, which provides a 6" high open space at the bottom of the panel to allow air flow and a lighted aesthetic
- Convertible, which provides a economical alternative to the Flush and Elevated Panel and allows the flexibility to convert from a Flush Panel Profile to an Elevated Panel Profile using the same frame

#### Standard Panel Wall (UNPFR, UNPER and UNPC)

All panel profiles accept the Panel Wall Add-On Screen – Glass (UNSPG) and Panel Wall Add-On Screen – Solid (UNSPS).

Flush and Conventional panel profiles can accept the Support Foot for Freestanding District (UAFFN) for freestanding applications. Elevated Panels cannot accept a freestanding foot.

#### Panel Wall with Inset Glass (UYPFR, UYPER and UYPCR)

All panel profiles accept the Panel Glass Blade for Panel with Inset Glass (UYSPG) and Bridged Glass Blade for Panels with Inset Glass (UYSCG).

The glass blade is inset into the frame, so there is less exposed trim offering a more seamless appearance.

Flush and Conventional panel profiles can accept the Support Foot for Freestanding District (UAFFN) for freestanding applications. Elevated Panels cannot accept a freestanding foot.

#### Panel Wall with Accessory Beam (UAFFR, UAFFER and UAFCR)

Includes an Accessory Rail for integration with Interpret Screens and Storage.

Flush and Conventional panel profiles can accept the Support Foot for Freestanding District (UAFFN) for freestanding applications. Elevated Panels cannot accept a freestanding foot.

# understanding panel walls (continued)

It can be used in a flush or elevated profile and is typically used for applications where the majority of the fascias do not have clips and are slot-mounted.**

- Consists of one or two sections depending on width and fixed rails at 6" and 29" (or 28" for panels with accessory beam) to allow for horizontal mounting of storage and worksurfaces
- Does **not** have fascia attachment clips, is complete with slots only
- There are two rows of slots side-by-side will accept both fascias and storage or supports in the same location
- Accepts all fascia types but for Fascias that are complete with fascia clips, a separate mounting clip kit is required for mounting the fascias to the frame
- When used in a Flush application fascias are mounted onto the frame to the floor, and when used in an Elevated application the fascia mounts onto the frame to the 6" rail and an additional Convertible Panel Wall Base and Foot Trims (UNPCF) are added to provide a base trim and foot cover on the frame below the 6" level
- Finished in Black

25

**Panel Wall Rail (UNPHN)**

- Complete with clips so can be used on all panels when Fascias with clips are specified

**Light Block Rail (UNEX)**

- Does not include clips so can be used on all panel types when fascias with no clips are specified

## support foot basics

Panel Wall Bases and Panel Wall Feet are used for elevated panel wall applications.

26

### Elevated Panel Wall Foot (UNPEFN)

- Used with the Elevated Panel Wall (UNPER) and Elevated Panel Wall with Inset Glass (UYPER)
- Mounted to the base of the panel frame to elevate the frame 6" above the floor
- Used at all ends and shared between two panels at 180° angles, but are **not** required at corners or 180° spacers because the connector provides the necessary panel support
- Available in Clear Anodized, Foundation and Mica paint finishes

### Convertible Panel Wall Base and Foot Trim (UNPCF)

- Used with the Convertible Panel Wall (UNPC) only in an elevated application
- Consists of a metal trim that is attached to the bottom rail of the panel and elevated feet that snap onto the frame post
- One Convertible Panel Wall Base and Foot Trim is required for all elevated panels 60" and less. Two are required for elevated panels 66" and wider as they are made up of two frames (specified as one unit at the overall length)
- Available in Foundation and Mica paint finishes

# support foot for freestanding district basics

The Support Foot is used to create Freestanding District Panel runs.

Support Foot (Shown)

27

## Support Foot for Freestanding District (UAFFN)

- Installed at the bottom of panels to create freestanding applications
- Cannot be used with an Elevated panel
- The Support Foot can be used in any of the four existing hole locations on the bottom of Flush or Convertible panels
- There must be a foot at both start and ends of a panel run
- The Support Foot takes up approximately 1/2" in height therefore a specific fascia is required below 29" high (the height is nominal, therefore 28" fascia will actually be approximately 27 1/2" to allow for the foot)
- The distance between panel support feet cannot exceed 96"
- A unique end trim is required, End Trim for Freestanding District (UATE) to accommodate the height change created by the foot
- Freestanding District can be specified up to 51" total in height (this can be either a 51" high panel or a 29" or 42" high panel with storage or screens to 51" high)
- The top area of the foot offers cable pass through capability available with levelers
- Available with levelers
- Recommend additional support feet if panel mounted storage usage is high

# understanding fascias

Fascias complete the elevations of panel walls providing functionality and aesthetic options.

## UN\_ applications (used on panels without freestanding feet)

- Fascias are available up to 96" wide to span the entire width of a District panel, creating a distinctive District aesthetic
- Fascias can also span half of a panel to provide additional functionality to a workstation
- Fascias are available for Flush, Elevated, Freestanding and Panel with Accessory Rail applications

- 1 **Tackboard and Whiteboard** Fascias can be framed to provide a high aesthetic level to panels, or unframed to provide cost effective alternatives in areas where functionality and cost are factors
- 2 Fascias are available with cut outs to allow **access to power** either above or below the worksurface level.
- 3 **Fabric and metal fascias** provide a cost effective alternative to solid fascias
- 4 **Accessory fascias** are available in a variety of heights to store personal items above the worksurface
- 5 **Solid fascias** are available in Laminate, Seamless, Flintwood and Natural Veneer to provide a high level of aesthetic and a furniture look and feel to a workstation  
Fascias can be segmented from 29" high or can be monolithic on 42" high panels
- 6 **Stretch solid fascias** span half way across a three-way connector to conceal the connector and provide an un-interrupted aesthetic. A second fascia must be specified to cover the remaining half of the three-way connector. Available in both Left and Right extensions
- 7 **Window fascias** mount into a panel wall frame to add lightness to a workstation. They do not mount to the top of a frame

## understanding fascias for freestanding district

UA\_ applications (used on panels with freestanding feet)

- ❶ Dedicated fascias are available for freestanding applications. They are a different height than standard fascias to accommodate the 1/2" thick support foot. A Fascias for Freestanding District is nominally 28"
- ❷ Fabric and Metal fascias provide a cost effective alternative to solid fascias. Fabric fascias are not available in 27" or 28" heights, must be used a 6" plus a 21" or 22" high fascia
- ❸ Freestanding fascias are only required at the base level of the panel.

# understanding the fascia type

## District Flush or Convertible Panel with Accessory Beam & Support Foot for Freestanding District Applications

- When using a panel type with Accessory Beam and Support Foot fascias are needed in order to accommodate the 1/2" for support foot as well as 1" for accessory beam
- Use fascias for freestanding District (UA coded fascias) at 27" high (vs 28") to account for Accessory Beam

## District Flush or Convertible Panel with Accessory Beam & Support Foot for Freestanding District

- Use fascias for freestanding District (UA coded fascias) on the base level (6") only
- For upper level use standard (UN) District fascia codes but 1" shorter (21" vs 22") to account for accessory beam

## District Panel Wall with Accessory Beam

- When no foot is necessary, use standard or District fascia codes (UN) but 1" shorter (27" vs 28" for Flush or Convertible Panel or 21" vs 22" for Elevated Panel) to account for accessory beam
- The only way to power a 29" high panel with accessory beam (not freestanding) is with a 27" high solid fascia (no fabric) or metal options

## Support Foot for Freestanding District

- When using the Support Foot (UAFFN), UA\_ fascias are required
- UA\_ fascias are only required on the bottom half of the panel

## Support Foot for Freestanding District

- Use fascias for freestanding District (UA coded fascias) on the base level (6") only
- For upper level use standard District fascia (UN)

## District Flush or Convertible Panel

- Use standard District fascia codes (UN)
- If UA\_ fascias are specified they will not fit

With Freestanding Foot

Without Freestanding Foot

## fascias basics

Fascias can be mounted onto panel wall frames by clip mounting or slot mounting. See chart below. The following charts outline the available options.

## clip-mounted

- The following fascia types mount to the Flush and Elevated Panel Wall Frame. They are typically hard surface fascias that provide a “District” aesthetic, and attach to clips on the frame. They are also referred to as “D-Style” fascias
- These fascias can also mount to the Convertible Panel Wall, however a Fascia Clip Kit (UNELK) is required to be install the fascia to the panel

## fascia basics (continued)

Fascias can be mounted onto panel walls through clip mounting or slot mounting. See chart below. The following charts outline the available options.

## slot-mounted

- The following fascia types mount to the Convertible Panel Wall Frame. They provide a cost effective alternative to “D-Style” fascias and are unframed. They are also referred to as “L-Style” fascias
- These fascias can also mount to the Flush Panel Wall or the Elevated Panel Wall Frame however, pre-installed clips will **not** be used. The fascias will mount into the slots in the panel frame only

## h2&gt;understanding worksurfaces

District provides a variety of worksurface shapes for primary and secondary worksurfaces. The following outlines the features of District worksurfaces.

- 1 District surfaces are standard with a 1" gap on the back side for cable access.
- 2 Worksurface widths are available in 1" increments to allow for an optional 1" gap on one or both sides of a worksurface and to match up with storage components (see Storage section).
- 3 Worksurfaces **cannot** span more than 72" without additional floor support (see the Supports section for further details).
- 4 Worksurfaces can be panel wall- or storage-mounted or specified with legs to create freestanding or semi-supported surfaces (see Supports section).  
Worksurfaces can be mounted on- or off-module.
- 5 **Grommets** can be specified on all surfaces.
- 6 The orientation of worksurfaces is determined by the location of the deepest end from the users perspective.
- 7 Tapered and Fan worksurfaces provide shared meeting spaces within a workstation.
- 8 Stand-Up Meeting surfaces are available as an alternative to sit down meeting surfaces.

## worksurface basics

The following worksurface shapes are available in District.

Nominal depth dimensions shown

**Rectangle Worksurface (UNWR)**

**Wedge Worksurface (UNWW)**  
(left and right handed available)

**Extended Wedge Worksurface (UNWE)**  
(left and right handed available)

**Wing Worksurface (UNWG)**

**Transition Worksurface (UNWT)**

**Shared Wedge Worksurface (UNWWH)**

**Tapered Worksurface (UNWBG)**

**Fan Worksurface (UNWF)**

#### Finishes

- Worksurfaces are available in Foundation Laminate, Seamless Color, Flintwood and Natural Veneer finishes
- Edge trims are available in Acrylic, ABS, Flintwood and Natural Veneer
- Acrylic is available with Foundation Laminate
- ABS is available with Foundation Laminate
- Flintwood edge trims are finished to match the Flintwood surface
- Natural Veneer edge trims are finished to match the Natural Veneer surface
- Seamless color edge trims are finished to match seamless surface

## workspace grain/pattern direction

Attention to grain/pattern direction is important when planning worksurfaces.

- There is no user edge so care must be taken during installation to match grain/pattern direction
- Grain/patterns are **not** “centered” on workspace or support
- Applies to Foundation Laminate (wood grain patterns), Flintwood (Standard and Cathedral) and Natural Veneer

### worksurfaces

- Grain direction will appear in the same direction, from side to side
- For Cathedral Flintwoods and Natural Veneers the grain will run from left to right from the user's prospective
- Grain patterns are **not** centered on workspace
- Includes Laminate, Flintwood (Standard and Cathedral) and Natural Veneers

- Regardless of workspace handedness, grain direction will run from side to side
- For Cathedral Flintwoods and Natural Veneers the grain will run from left to right from the user's prospective

# worksurface grain/pattern direction (continued)

Attention to grain/pattern direction is important when planning worksurfaces. The following examples demonstrate this.

- There is no user edge so care must be taken upon installation to match grain/pattern direction
- Grain/patterns are **not** “centered” on worksurface or support
- Includes Foundation Laminate, Flintwood (Standard and Cathedral) and Natural Veneer

## bridge worksurfaces

District does **not** offer a bridge worksurface so grain direction changes will always occur

227

## worksurfaces combined with supports

- Grain direction on Supports is always vertical
- For Cathedral Flintwoods and Natural Veneers the grain runs from bottom to top
- There is no matching grain across Supports (A) and Worksurfaces (B)

## edge trim style overview

The chart below indicates which edge trim style can be specified with each District worksurface finish.

! Both user edge and non-user edges have the same edge trim style

## stand-up meeting surface overview

The Stand-Up Meeting Surface provides a stand-up meeting area as an alternative to seated guest solutions in small footprint workstations.

UNWW  
Wedge Worksurface

The Wedge Worksurface provides depth transition for primary worksurface applications.

**WHAT’S INCLUDED**  
1 worksurface, grommet (if specified).

**NOTES**  
The orientation (left or right) is determined by the location of the deepest end from the user’s perspective.

Actual depth is 1" less than nominal depth to allow for a cable management gap at the back and to align with storage.

Actual widths equals nominal width, allowance for gaps at side edges must be specified.

## UNWEN

### Extended Wedge Worksurface

The Extended Wedge Worksurface provides depth transition capable of aligning with a secondary worksurface.

#### WHAT'S INCLUDED

1 worksurface, grommet (if specified).

#### NOTES

The orientation (left or right) is determined by the location of the deepest end from the user's perspective.

Actual depth is 1" less than nominal depth to allow for a cable management gap at the back and to align with storage.

Actual widths equals nominal width, allowance for gaps at side edges must be specified.

## UNWGN

### Wing Worksurface

The Wing Worksurface provides depth transition capable of aligning with a secondary worksurface.

#### WHAT'S INCLUDED

1 worksurface, grommet (if specified).

#### NOTES

The orientation (left or right) is determined by the location of the deepest end from the user's perspective.

Actual depth is 1" less than nominal depth to allow for a cable management gap at the back and to align with storage.

Actual widths equals nominal width, allowance for gaps at side edges must be specified.

UNWTN  
Transition Worksurface

The Transition Worksurface provides depth transition capable of aligning with one or two secondary worksurfaces.

**WHAT’S INCLUDED**  
1 worksurface, grommet (if specified).

**NOTES**  
The orientation (left or right) is determined by the location of the deepest end from the user’s perspective.

Actual depth is 1" less than nominal depth to allow for a cable management gap at the back and to align with storage.

Actual widths equals nominal width, allowance for gaps at side edges must be specified.

## understanding storage

District storage is available in a variety of formats, from pedestals, to stackers and lockers. The following outlines the various storage options available.

- 1 **Overheads** are available in a variety of heights and configurations. They can be open or have glass or solid doors and can be either panel-mounted or center-mounted on-module.  
Overheads can be single sided or double sided.
- 2 **Stackers** stack onto other base storage units and can face the same direction as the base, or opposite directions.
- 3 **Bookcases** are available to maximize open storage.
- 4 **Lockers** provide coat and shelf storage in a variety of configurations including with cubbies, with solid backs, dual, triple and quad lockers, front or side closet locations and mail slots.
- 5 **Towers** combine coat storage, box and file and open compartments in front and side locations.
- 6 **Undersurface storage** includes pedestals with solid backs and cubbies, rolling pedestals, stretch pedestals, single lockers and credenzas.  
Lateral files are available 36" and 42" high when higher storage is required.
- 7 **Credenza** options include full drawer, open, and open with drawer hinged door, or sliding door combinations

### Finishes

- All storage is available in Seamless Colors (including the new Accent colors), Laminate, Flintwood and Wood Veneer finishes

- Laminate cases are **not** available on 96" wide
- When Seamless, Flintwood or Veneer cases are specified, the backs and fronts can all be different wood finishes, the fronts **cannot** be Laminate
- Handles are available in Foundation, Mica and Accent. Feet are available in Storm White (Q), Platinum (7), Very White (V), Anthracite (X), Graphite (M) and Burnished Bronze (2)
- Grommets are finished in Platinum
- Glass is available in Frost or back-painted glass in various colors

# understanding district storage

District storage can be planned as space division, panel or worksurface support, or in a more conventional manner where it is incorporated into panel environments. A wide variety of finish protocols are available to suit different planning styles and budgets. District storage also lends itself to integration with the Teknion Leverage system.

## topography

- In conventional planning, panels tend to be one height and the storage is contained within the station

- District typically uses storage to provide space division, offering a varied workspace topography. The line of site can be varied to allow open spaces with different shapes and sizes

## district storage styles

- District is available in three different styles and each provides a different function, and varying levels of power and communication access

- Standard Storage has levelers only which allow case to sit 1" above floor height. Power and communications **cannot** be passed through it

- Elevated Storage with District Feet provides a lighter aesthetic by raising the storage 6" off the floor
- Available on 19" deep credenzas only
- Power and data communications **cannot** be passed through the storage

281

- Elevated Storage with Angled Feet provides the most options and flexibility. The legs are on the corners, allowing a power and communications channel to pass along the bottom of the storage to provide power in the storage at either beltline or base level

- Shared storage within workstations allows room for collaboration as well as space division
- Allows for planning in smaller spaces more accommodating to storage
- Power and data communications **cannot** be passed through the storage

## understanding district storage (continued)

### storage depths

- Storage is available in varying depths to correspond with worksurface depths, create stackable spine storage, or for an increased sense of spaciousness in small workstations

- Storage in depths of 16" allows for cabinets to be stacked flush in spine planning applications

282

- Credenzas, files and worksurfaces in 19" depths allow worksurfaces to be layered over the storage

- Depths can be varied, to create a "furniture look and feel", and an increased sense of spaciousness in a workstation

## understanding district storage (continued)

### secure and accessible areas

- District storage includes secure or enclosed and accessible areas to allow for a variety of storage options. Backs can also be open or closed on some units to maximize flexibility

### on- or off-module capability

- Storage can be stacked the full width of lower cabinets, or in off-module configurations

## understanding district storage (continued)

### maximized support

- Worksurface support has been maximized so that virtually any storage component can serve as support for worksurfaces (See Supports section for actual support brackets required)

284

- Storage units that can attach to panels to provide support are complete with slots on the back to accept the support brackets. This allows for maximum flexibility because holes do **not** need to be drilled into the units exterior surface for mounting the brackets

## understanding district storage (continued)

### layering

- District provides the opportunity to layer worksurfaces over storage to allow for extra piling surfaces
- The amount of piling worksurface area is maximized by the gap between the shelf at 36" high, the worksurface at 29" high and the credenza at 21" high

### standard storage heights

- 1" of levelers are included in the total height of the storage (eg. If height is 51", actual height of the case is 50" and levelers, fully extended, make up 1")

### leveling range

#### standard storage

- The following storage units (UPFDS, UPSS, UFLS, ULDS, UHDS, UTLS, UTDD, UTW & UTWW) will receive extended levelers (UNSXL) which will allow the unit to be levelled 0.5" down and 0.625" up
- All other units will have a standard leveler which will allow for levelling 0.5" down and 0" up.

#### elevated storage

- Leveling range of .5" down and 2.5" up

## ULGE

## Low Single Sliding Door Credenza – Elevated

The Elevated Low Single Sliding Door Credenza provides both open and secured, lockable binder storage, and the capability to support worksurfaces, stackers and panels.

## WHAT'S INCLUDED

1 credenza, 2 District feet or 4 angled feet (as specified), 1 sliding door with pull, grommet (if specified), lock and keys (if specified).

## WHAT'S EXCLUDED

A Seat Cushion (UWLC) or Fitted Seated Cushion (UWLF) can be ordered separately. Can be found on pages 684 and 685.

## NOTES

Single Sliding Door Credenzas will always have two sections (one open and one secured) regardless of the width of the unit.

Handedness is determined by the location of the open section when the cabinet is in the locked position.

The 16" deep credenza **cannot** be specified with a District Foot (D).

Grommets are finished in Platinum.

Grommet option is available for casual power and data routing only. The Cubby Power Monument (EWQPM) cannot be used in the Low Single Sliding Door Credenza.

The Reconfigurable Low Credenza-to-Worksurface Support (UWCPWN) **cannot** be used with this unit as it will interfere with the sliding door.

## ULGS

## Low Single Sliding Door Credenza – Standard

The Standard Low Single Sliding Door Credenza provides both open and secured, lockable binder storage, and the capability to support worksurfaces, stackers and panels.

## WHAT'S INCLUDED

1 credenza, 1 sliding door with pull, 2 height-adjustable shelves, lock and keys (if specified).

## WHAT'S EXCLUDED

A Seat Cushion (UWLC) or Fitted Seated Cushion (UWLF) can be ordered separately. Can be found on pages 684 and 685.

## NOTES

Single Sliding Door Credenzas will always have two sections (one open and one secured) regardless of the width of the unit.

Handedness is determined by the location of the open section when the cabinet is in the locked position.

The Reconfigurable Low Credenza-to-Worksurface Support (UWCPWN) **cannot** be used with this unit as it will interfere with the sliding door.

## Low Double Sliding Door Credenza – Elevated

The Elevated Low Double Sliding Door Credenza provides secured, lockable binder storage, and the capability to support stackers and panels.

**WHAT'S INCLUDED**

1 credenza, 2 District feet or 4 angled feet (as specified), 2 sliding doors with pulls, lock and keys (if specified).

**WHAT'S EXCLUDED**

A Seat Cushion (UWLC) or Fitted Seated Cushion (UWLF) can be ordered separately. Can be found on pages 684 and 685.

**NOTES**

Double Sliding Door Credenzas will always have two sections secured with two sliding doors regardless of the width of the unit.

The 16" deep **cannot** be specified with a District Foot (D).

The Reconfigurable Low Credenza-to-Worksurface Support (UWCPWN) **cannot** be used with this unit as it will interfere with the sliding door.

It is **not** recommended that Double Sliding Door Credenzas be used to support worksurfaces in a perpendicular application as handle pulls will be difficult to reach under the worksurface.

Cubby Power Mounting (EWQPM) cannot be mounted in sliding door credenzas.

## Low Double Sliding Door Credenza – Standard

The Standard Low Double Sliding Door Credenza provides secured, lockable binder storage, and the capability to support stackers and panels.

**WHAT'S INCLUDED**

1 credenza, 2 sliding doors with pulls, 2 height-adjustable shelves, lock and keys (if specified).

**WHAT'S EXCLUDED**

A Seat Cushion (UWLC) or Fitted Seated Cushion (UWLF) can be ordered separately. Can be found on pages 684 and 685.

**NOTES**

Double Sliding Door Credenzas will always have two sections secured with two sliding doors regardless of the width of the unit.

The Reconfigurable Low Credenza-to-Worksurface Support (UWCPWN) **cannot** be used with this unit as it will interfere with the sliding door.

It is **not** recommended that Double Sliding Door Credenzas be used to support worksurfaces in a perpendicular application as handle pulls will be difficult to reach under the worksurface.

Closed Stacker

The Closed Stacker is a 16" deep closed cabinet that sits atop credenzas, towers and laterals to provide adjustable shelving and secured storage.

**WHAT'S INCLUDED**  
1 cabinet, single-hinged door(s) or a combination of single-hinged door and bi-folding doors (depending on width), height-adjustable shelves (depending on height), lock and keys (if specified).

**NOTES**  
For widths 24", 30" & 36", handedness will indicate which door will have the door handle and lock, for widths 42" & 48" handedness will indicate the location on the cabinet of the single hinged door (not the bi-fold).

Shelves are height-adjustable.

Height denotes height of the cabinet only and must be added to the height of the base unit (21" & 28" high credenzas or stretch pedestals or 36", 42" or 51" towers or lateral files) to get total height.

It is **not** recommended to stack units so that total height exceeds 66".

Stackers **cannot** be stacked on top of each other.

## UTDC

## Pedestal Tower with Cubby Back

The Pedestal Tower with Cubby Back provides both file and binder storage, the capability to support worksurfaces, and panels and the ability to route and provide access to power and data.

## WHAT'S INCLUDED

1 Pedestal Tower, 4 angled feet (with elevated style), lock and keys (if specified), drawers, door and pulls (as specified).

## NOTES

In the Elevated (E) Style, the 36", 51" and 66" heights are available in Box/Box/File (B) and File/File (F) drawer combinations and the 42" height is available in a Box/File (X) drawer combination. The 36" high does **not** have a door.

In the Standard (S) Style, the 42", 51" and 66" heights are available in Box/Box/File (B) and File/File (F) drawer combinations and the 36" high is available in a Box/File (X) drawer combination. The 36" high does **not** have a door.

Cubbies in the back will have a 1" inset on one side to allow for the application of an Infill Screen if closure is desired (purchased separately, see Screen Section). The handedness of the inset side will be the same side as the location of the hinges on the door.

Left or Right must be selected for this unit. Handedness is determined by the location of the hinges on the upper door. If there is no door (36" high Elevated), handedness is determined by the side of the 1" inset on the cubby shelves.

Beltline Back Cut Out (E) **cannot** be applied to 36" or 42" Pedestal Towers.

The location of the locks on the pedestals will be on the same side as the locks for the hinged door.

Total the number of SOKL (Sets of Keys Alike) quantities and transfer each total quantity to your Purchase Order.

Sets ordered in the incorrect quantities that are required for the order may result in the order being placed on hold.

Please verify the quantity by reviewing the plan carefully to ensure that all products with locks have been identified. Remember that some products may have more than one lock core per unit based on size and configuration.

For further details on how to specify locks, please see the Teknion Lock Specification Guide on our website.

## understanding district support

The following outlines the guidelines for supporting panels and worksurfaces in panel-mounted applications.

- When planning with District panels, the end of run conditions must be supported at 6" and 29" high and at the front of a worksurface or storage. There are different ways of providing support, depending on whether storage or end gables are used
- When properly supported, the method of support forms a triangle

### end of run with no storage

### end of run with low storage

### end of run with high storage

# worksurface support basics – horizontal

The following outlines the features of supports that connect horizontally, either below worksurfaces, or for connecting worksurface to panel walls.

## Worksurface Panel Wall Brackets (UNBP)

- Off-module connectors that attach the worksurface to a Panel Wall
- Are mounted in the 29" high horizontal rail and can be connected at any point along the width of the worksurface and Panel Wall but must be spaced minimally every 48"
- Are **not** height-adjustable

## Mid Gable (UNGMF) & Mid Gable – Height-Adjustable (UNGMA)

- Used on worksurface spans larger than 72" to provide additional floor support or to join two worksurfaces, also includes a bracket at the 6" high level to provide support to the panel wall if required
- (UNGMA) offers a height-adjustable leveling option with a range of 3" (2" above and 1" below worksurface)

## Flush Plate (UNRF)

- Used in conjunction with other supports to maintain alignment of worksurfaces
- **Cannot** be used in freestanding applications, is used in panel wall application only
- **Not** required when cantilevers are used

## Worksurface Reinforcement Channel (UNRC)

- Adds rigidity to worksurface to reduce deflection in the worksurface
- Required for all worksurfaces with an unsupported span over 48"

## Flush End Gable (UNGEF) & Flush End Gable – Height-Adjustable (UNGEFA)

- Consists of a solid gable and a support to allow to be attached to the underside of a worksurface and to a panel available in depths to match 17", 20", 24", 30", 36" deep worksurfaces
- Available in depths to match 17", 20" 24" 30", & 36" deep worksurfaces
- (UNGEFA) offers a height-adjustable leveling option with a range of 3" (2" above and 1" below worksurface)
- Provides floor support to a panel wall at the end of worksurface run and also has a bracket at the 6" high level to provide panel support

## End Gable (UNGEN) & End Gable – Height Adjustable (UNGEAN)

- Consists of a single leg and a support to allow it to be attached to the underside of a worksurface and to the panel to provide floor support to a panel wall at the end of a worksurface run available in depths to match 17", 20", 24", 30", 36" deep worksurfaces
- Available in depths to match 17", 20" 24" 30", & 36" deep worksurfaces
- Available open or with an infill panel
- The infill has a bracket at the 6" high level and is used when panel support is required at the 6" level - the no infill option **cannot** be used for supporting panels as it does **not** include the bracket
- (UNGEAN) offers a height-adjustable leveling option with a range of 6" (3" above and 3" below worksurface) and is available with or without an infill

# worksurface support basics – vertical

The following outlines the features of vertical supports that allow for height adjustable worksurface mounting.

## Cantilever (UNLVR)

- Mounts into the center vertical channel of a panel wall over 60" wide to provide on module height adjustable worksurface support at 1" increments available in depths of 11" & 14"
- Available in depths to match 11" & 14"

## Worksurface Panel Wall Bracket – Height Adjustable (UNBPA)

- Mounts into the vertical channel at the end of a Panel Wall to provide on-module height-adjustable support for worksurfaces
- Used with Flush Full-Height Windows – Single and Double Glazed (UNPFWS, UNPFWD) to support worksurfaces as no horizontal channel is available at 29" high

## Off-Module Cantilever (UNLVFN)

- Mounts in the 6" and 29" horizontal channels of the Panel Wall to allow for height-adjustable off-module applications
- Can be used in place of the Mid Gable (UNGME) and Height-Adjustable Mid Gable (UNGMEFA), height-adjustable on an elevated panel as it does **not** extend below the 6" horizontal rail available in depths of 11" & 14"
- Available in depths to match 11" & 14"

## Cantilever for Panels with Accessory Beam (UALVFN)

- Available in depths to match 11" & 14"
- Left or Right handed available
- Mounts into the center vertical channel of the panel to provide on-module height-adjustable worksurface support at 1" increments
- Used only when using a panel frame with accessory rail in order to accommodate the gap from the beam

# worksurface support, freestanding basics

The following outlines the features of supports that are typically used in freestanding or semi-supported environments.

## Semi-Suspended Gable (UNGSN) & Semi-Suspended Gable – Height-Adjustable (UNGSAN)

- Consists of two legs and a support, and is used at the open end of a panel wall mounted semi-suspended worksurface
- Available with or without an infill, standard or height adjustable
- Have a height-adjustable range of 6" (3" above and 3" below)

## Leg – Single (UNLGN), Leg – Height-Adjustable Single (UNLGA), Leg – Pair (UNLGP) and Leg – Height-Adjustable Pair (UNLGPA)

- Used primarily in freestanding applications to provide worksurface support but can also be used for intermediate support in panel wall applications
- Available in single or pairs, standard or height-adjustable
- Have a height-adjustable range of 6" (3" above and 3" below)

## Structural Flush Plate (UNRFS)

- Used to join two worksurfaces in freestanding application
- Two Structural Flush Plates used with a leg provides the required stability to create freestanding desks

# worksurface-to-storage support basics

The following outlines the features of supports that connect storage to panel walls, worksurfaces and walls.

2 Brackets

1 Bracket/1 Flush Plate

## Worksurface-to-Tower Bracket Kit (UWBT)

- Used to attach worksurfaces to storage components
- Available with two options:
  - (BB) two brackets, which are used with storage with no cubbies – the brackets attach to the underside of the work surface and the side of the storage
  - (BF) one bracket, one flush plate, which are used with storage with cubbies – the bracket attaches to the underside of the worksurface and the side of the storage, and the flush plate attaches the worksurfaces and a shelf in the cubbie section of the storage

## Height-Adjustable Worksurface-to-Tower Bracket Kit (UWBTH)

- **Cannot** be used on a Tower with Cubby Back (UKSC & UTDC).

## Mini Leg (UNCLN)

- Used in place of the Low Credenza Worksurface Support (UNCPWN) when panel support and height adjustability is **not** required because it does **not** attach the storage, it simply rests on it
- **Cannot** be used in freestanding desk applications
- Must be used with Worksurface Panel Wall Bracket (UNBP) and Storage-to-Panel Bracket (UWSPB). This combination provides support to panels

Fixed-Height

Height-Adjustable

## Low Credenza-to-Worksurface Supports (UNCPWN)

- Mount to the underside of a worksurface and to the top of a Low Credenza to provide support to the worksurface
- When used in combination with the Worksurface Panel Wall Bracket (UNBP) and Storage-to-Panel Bracket (UWSPB), support is provided for panels
- Offer a height-adjustable leveling option with a range of 4" (3" above the fixed height of 7" or 1" below the fixed height of 7")

## Reconfigurable Low Credenza-to-Worksurface Support (UWCPWN)

- Mounts to the underside of the worksurface, wraps around the top of an open compartment on low storage and attach to the underside of the open section
- Does **not** attach to the top of a storage unit, therefore **not** making it to allow for reconfigurability
- Is **not** height-adjustable

# storage-to-panel support basics

The following outlines the features the supports that connect storage-to-panels.

## Centermount Cabinet Support Posts & Top Trim (UNOPT)

- Used to support upmount cabinets on-module
- Include the top trim and posts, so replaces a standard top trim
- Available 9" high or 13" high posts and 30"-60" wide
- To maintain District datum heights it is recommended on a panel 42" high use a 9" post and a 15" cabinet for 66" high datum, and on a panel 29" high use 13" post and a 9" cabinet for a 51" high datum

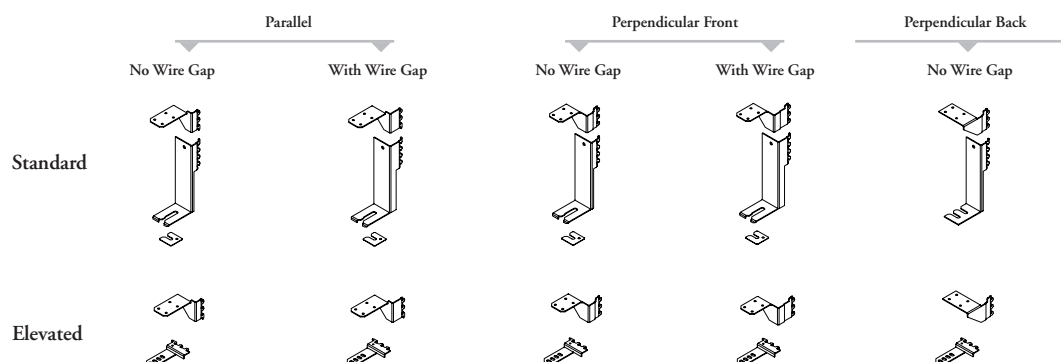

## Centermount Cabinet Support Brackets & Top Trim (UNOBT)

- Similar to Centermount Cabinet Support Posts & Top Trim (UNOPT) except that there are no posts
- Are available from 30" - 96" wide

## Storage-to-Panel Bracket (UWSPB)

- Attaches to the back or side of a storage component and mounts into the vertical channel of a District panel, to provide support to a panel wall
- Options are available for parallel and perpendicular mounting at either the front or back of the cabinet, and for elevated and standard credenza heights
- Available with wire gap options
- Must be specified left or right handed, handedness being determined by the side of the panel to which storage is attached

# selecting the correct storage-to-panel bracket

# electrics & communications overview

District offers a non-directional wiring system that allows for maximum flexibility and simple reconfiguration.

- Power must be turned off during all installations and reconfigurations

# power entry basics – panel-mounted workstations

Power and communications cables enter a workstation either through a base feed or a ceiling feed. The options are detailed below. The following outlines the features of the electrical and communication components available for use in District panel environments.

## Base Feed (UNQBFR)

- A hard wired connection that supplies power into a panel from the building power source
- Both base feeds and harnesses can be used in the same panel
- Available in 8T and 8K wiring systems to allow for most common Teknion wiring configurations
- Available in options for mounting into either solid fascias or metal or fabric fascias
- Available in a PVC free option
- If a basefeed kit is mounted onto an elevated panel, it will be below the rail, therefore will be exposed.

## Chicago Base Feed (UNQBFRCH)

- Provides the conduit only for Chicago electrics wiring restrictions that require that all wiring and connections be supplied and connected by a licensed electrician
- Supplied with three wires for a single circuit only
- Available 72" long only
- Box painted Platinum

## Split Base Feed (UNQBFSR)

- Same as the base feed except that it is hard wired to the building power supply in two places for New York City wiring restrictions
- Accommodates hard wiring within the floor monument and in the wiring junction box
- Box painted Platinum

## Power Pole (UNQEP) & End of Run Power Pole (UNQEPR)

- Used to house the ceiling feed and includes a pole divider for separating the ceiling power feed from the communications and data cables
- Available in 48", 72" and 96" heights for up to 10' ceilings
- Available in options for corner mounting and off-module mounting
- End of Run Power Pole (UNQEPR) **cannot** be installed off-module or on a corner

## Ceiling Feed (UNQCFR)

- Routes power into the panel from the ceiling through the power pole
- Includes a junction box to connect to the building power supply at the ceiling
- Also connects to a power harness
- Ceiling feed is certified UL and c-UL
- Length of the feed represents the length of the harness encased in flexible conduit – an additional 6" of cable is provided for connection the ceiling junction box

## Chicago Ceiling Feed (UNQCFRCH)

- Same as ceiling feed except that there is no connector on the bottom end due to Chicago electrics wiring restrictions
- Supplied with three wires for a single circuit only

# power & communications basics – panel-mounted workstations

Power can be accessed at various heights within a panel wall through the use of power boxes and receptacles.

## Power Box (UNQPR)

- A module for mounting receptacles (specified separately)
- Mounts to the panel frame below or above panel wall rails but does **not** clip to light block rails
- Available in single (S) or double (D) lengths – the 24" and 30" wide panels can only accommodate the single box
- Single length power box is 12" long and includes a bezel with one receptacle and one data opening
- Double length power box is 16" long and includes a bezel with two receptacle and one data opening
- Either a one-sided or back-to-back application must be specified (even though it is the same box), so that the proper amount of bezels will be included
- Available in a PVC free option

## Receptacle Outlet (UNQRO)

- A single duplex receptacle that slides onto the power box module to provide power
- Specified individually for maximum circuit flexibility
- Available for 8T and 8K wiring configurations
- Available in circuits 1, 2, 3, 5 and 6
- Circuits 1, 2, 3 and 5 are used with the 8T and circuits 1, 2, 5 and 6 are used with the 8K wiring system
- Available in 15 amp and 20 amp (20 amp only available in black)

## Chicago Power Box (UNQPRCH)

- Same as the power box except for Chicago electrics applications
- Includes the outlets and faceplates, but does **not** include any connectors – electrical connections must be done on site by a certified electrician
- Must be specified single or double length, and one-sided or back-to-back

## Data Extender Plate (UNQDE)

- The Data Extender Plate is placed over a communication opening to provide extended depth for data jacks which may be required in some applications. Consult your data cabling supplier for clearance requirements

# wiring systems
