

Once upon a time a team of **award winning** designers and **skilled** craftsmen joined together to develop an **exciting** new furniture company.

They created an **imaginative** collection of **enduring** products for libraries, healthcare facilities, schools, and even homes.

With a commitment to **sustainable** manufacturing practices, superb **quality**, and a **terrific** customer experience, everyone lived happily ever after.

Have. Some. Fun.
Not too big, not too
small, these are
juuust right.

shell art

eve creatures

A CNC controlled laser is used to cut a chair shell forming a three dimensional image on the chair back. One side of the chair will show the creatures front side characteristics (such as eyes and nose) and the opposite side will show the creatures backside characteristics (such as a tail). Laser engraving and laser cutting is typically combined to create the different characteristics of the eve creature.

laser engraving

A CNC controlled laser is used to make an engraving that penetrates the surface of the chair shell. The shell may be engraved on either or both sides.

laser cutout

A CNC controlled laser is used to cut through the back of the shell, forming an opening. This space creates an image that is visible from both sides of the chair shell.
