For Canadian Pricing

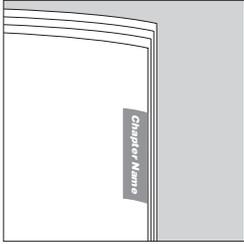

Canadian factor can be found at steelcase.com/CADpricing.

Calculate in the following order to avoid rounding errors:

- Multiply the base price and each option by the Canadian factor.
- Round each to the nearest dollar.
- Add base and options for total list price.

Eleven Tips: How to Get the Most Out of This Book

Tip 1

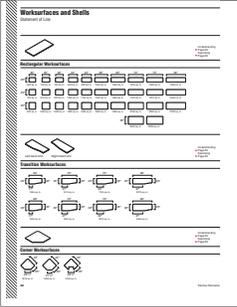

Watch the tabs on the right-hand edges of the pages. They'll always indicate which chapter you are in.

Tip 2

Review the overview pages for an introduction to c:scape product solutions. This section highlights different considerations that should be taken into account as you plan your workspaces.
▶ Pages 6-7

Tip 3

Use the Statement of Line pages for an overview of the available components, their sizes, and page references for additional information.

Tip 4

Find cross reference by looking for page numbers flagged with an arrow.

Tip 5

Study the product detail pages in the *Understanding* section to learn everything an expert knows about specific products. Each product detail page in this section contains the following features, where applicable:

- Product Drawing
- Actual Dimensions
- Product Details
- Connections
- Wiring and Cabling
- Surface Materials
- Application Topics

Product Drawing shows you what the product looks like and points out important features.

Product Details gives specific information on the product and how it is used.

Surface Materials lists what material is used for each part of the product.

Product Details

- Tip: You can specify... (Page 100)
- Product Details... (Page 100)

Connections

- Connections... (Page 100)

Wiring & Cabling

- Wiring and Cabling... (Page 100)

Surface Materials

- Surface Materials... (Page 100)

Application Topics

- Application Topics... (Page 100)

Actual Dimensions table lists the dimensions of the product.

Connections describes how the product is assembled or how it attaches to another product.

Wiring and Cabling details the cable-management and cable routing capabilities of the product.

Application Topics provides useful advice on how to apply the product.

Tip 6

Refer to the specifying pages for all the information needed to order a product. Each product specifying page contains a variety of elements to help you complete a specification:

- Product Drawing
- Standard Includes
- Required to Specify
- Options
- Related Products
- Specification Information
- Dimensions
- Style Number
- Price

Product Drawing shows you what the product looks like.

Standard Includes (under the dark grey band) provides a list of what comes standard with the product.

Required to Specify (under the dark grey band) itemizes the information that you must provide to order the standard product and the preferred sequence for specification.

Specification Information (under the light grey band) provides product dimensions, style numbers, and prices for the standard product and any surface material choices that are available.

Options (under the black band) lists all the options that apply to the product, their price, and what is required to specify.

Related Products provide specification information for products that are directly related.

Tip 7

Italic typeface on specifying pages usually identifies wording that you should use in your order.

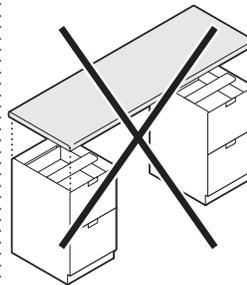

i>

Tip 8

Wiring & Cabling Cable-management choices to allow wires and cables to pass through work-surfaces include three-piece grommets, 4"-square grommets, continuous channel grommet, and cord catcher. *Tip: You can specify only one type of cable-management option on a single worksurface.*

Watch for tips throughout the text that give you explanations and helpful instructions.

Tip 9

Learn what you cannot do by looking for drawings crossed out with an "X."

Tip 10

Use the surface materials listings in the Surface Materials section of this book to find surface material color numbers. ▶ Page 195

Tip 11

Style Number	Page
2256-P	308
32WCP	265
4942	308
87-7102002	331
87-7102003	331
88-PS	194

Refer to the style number index when you know a style number and you need to find the page that has more details about the product. ▶ Page 216

Additional Resources

c:scape products are supported with informational materials, tools, and software to help you plan, specify, and order an installation efficiently.

Printed Materials

Other Specification Guides

Steelcase offers a comprehensive portfolio of furniture and solutions. For the full offering of products, refer to the individual product specification guides. These can be accessed at the www.steelcase.com web site or at village.steelcase.com

Computer Tools

Electronic Catalog

Accurate sales quotations and purchase orders for Steelcase products are created with specification software that uses Steelcase Electronic Catalog data. Use the data to specify and price style numbers and options for every Steelcase product. The data is updated bimonthly by Steelcase and provided to software programs including: the Hedberg Business System, SmartTools—Steelcase's design and specification software (for more information on SmartTools, please email SmartTools@steelcase.com), the ProjectMatrix Project Symbols libraries, as well as 20-20 CAP Studio.

Furniture Symbol Graphic Data

Steelcase creates 2D and 3D furniture symbols (with attributes) for planning and initially specifying Steelcase products. This data is incorporated into several add-on software packages that work in either a Microstation or an AutoCAD drafting environment.

Digital Publications

If your device has a bar code reader App, scan this QR code for a direct link to the online digital publications. Utilizing this QR code allows you to search across multiple specification guides, share across social media, or print out pages. You can also access these digital publications at www.steelcase.com or village.steelcase.com.

Support

Steelcase Capabilities

Steelcase products are distributed, installed, and serviced through a network of more than 600 dealers worldwide. Steelcase is also represented with offices and corporate showrooms in 26 U.S. cities, 4 Canadian cities, and in France, Germany, Great Britain, and Japan. Every Steelcase product meets our exceptionally high standards of quality and durability and comes with the Steelcase assurance of excellence in service.

For assistance, please call your local dealer, the Steelcase Solutions Resource Team, or the Steelcase Solutions Fulfillment Team at 1.888.STEELCASE (1.888.783.3522) or send an e-mail to lineone@steelcase.com.

Call the Steelcase Solutions Resource Team prior to placing an order, when working on a bid, or when you need information about product applications and specifications.

Call the Steelcase Solutions Fulfillment Team if you have submitted an order to Steelcase and you need to speak to your Solutions Fulfillment Team Representative about the order. Also call if you have any post-shipment quality or warranty concerns or service parts questions.

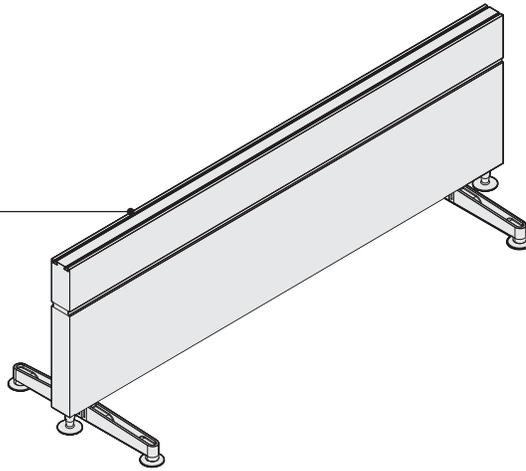

Outside the U.S.A., Canada, Mexico, Puerto Rico, and the U.S. Virgin Islands, call 1.616.247.2500.

For information about Steelcase, the name of your nearest Steelcase dealer, or for product literature, call 1.800.333.9939 or visit our Web site: steelcase.com.

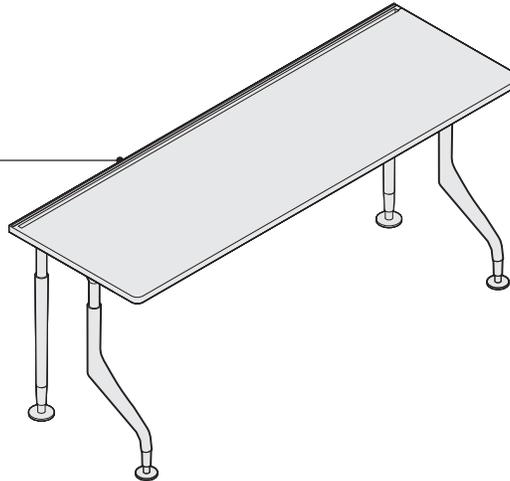

Overview

c:scape settings are created by planning with five key components: beams, desking, low storage, mid storage, and screens. The same components can be used in the open plan and private office.

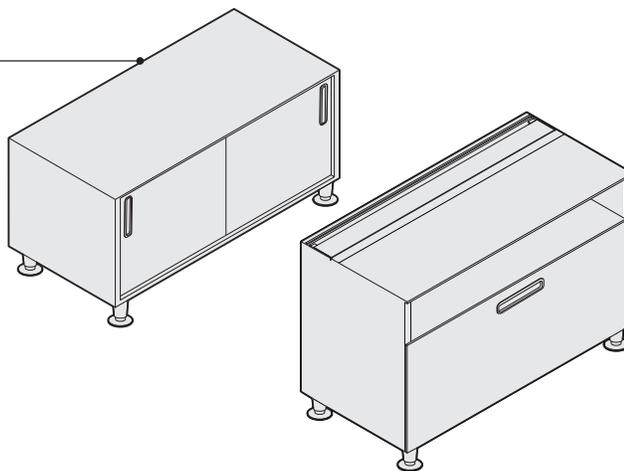

The beam is 24"H x 3"D and is available in widths of 4', 5', 6', 7', and 8'. The beam interfaces with the building wiring and distributes power and data to the users providing access points in the base area, the desk, and low storage. The channels on top of the beam allow for tethering of desks, upmounting of mid storage, and mounting of screens. Beams can be connected inline and off-module at 90° to provide a sense of boundary within the space.

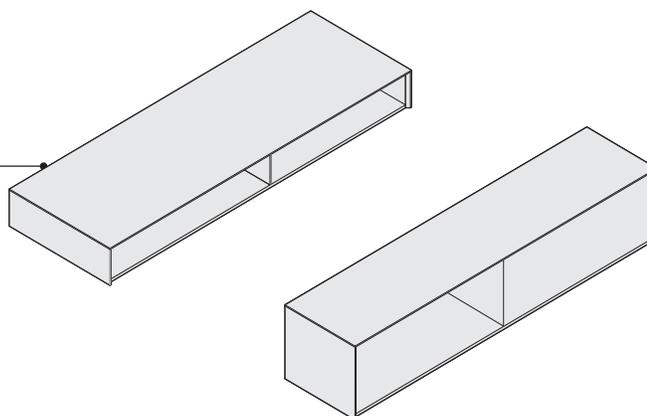

Desking is made up of an understructure and a surface (straight, transition, or tapered). Desks can be freestanding, tethered to the beam, or tethered to low storage. Supports are ordered separately. The surface of the desk slides forward to reveal the connect zone in the understructure which accommodates easy access to power, data, and cord management. A non-sliding desk is also available.

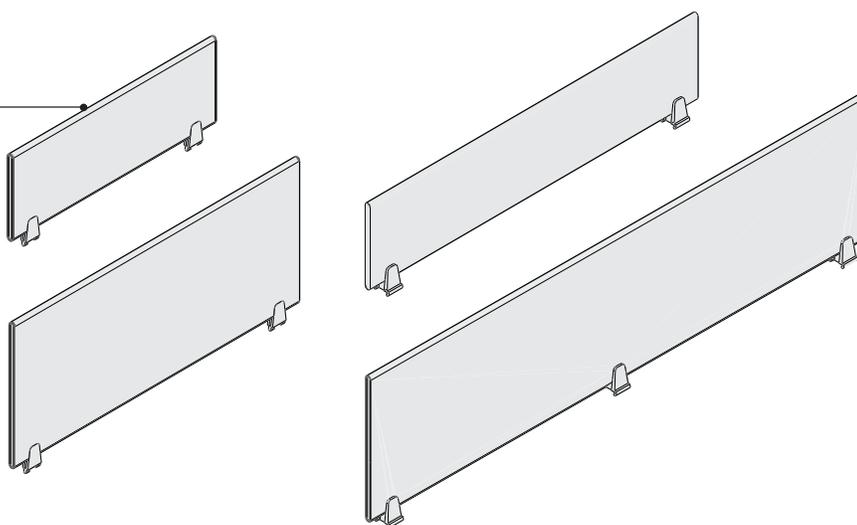

Low storage is available in two heights 18" (1 high) and 24" (1 1/2 high). The depth for both is 17". Widths of 30", 36", 42", 48", 60", and 72" are offered. Storage can be open or closed, using drawers or inline sliders, or a combination of both creating multiple configurations. 1 1/2- high storage can be specified with a connect zone, providing easy access to power, data, and cord management.

Mid storage provides a place to store items and also provides seated visual privacy. Storage can be mounted parallel or perpendicular to the beam or wall mounted. Storage can be shared or personal and comes in two different heights, 7⁷/₈" (Slim) and 15" (Tall). Slim storage is always open. Tall storage can be specified as open or closed.

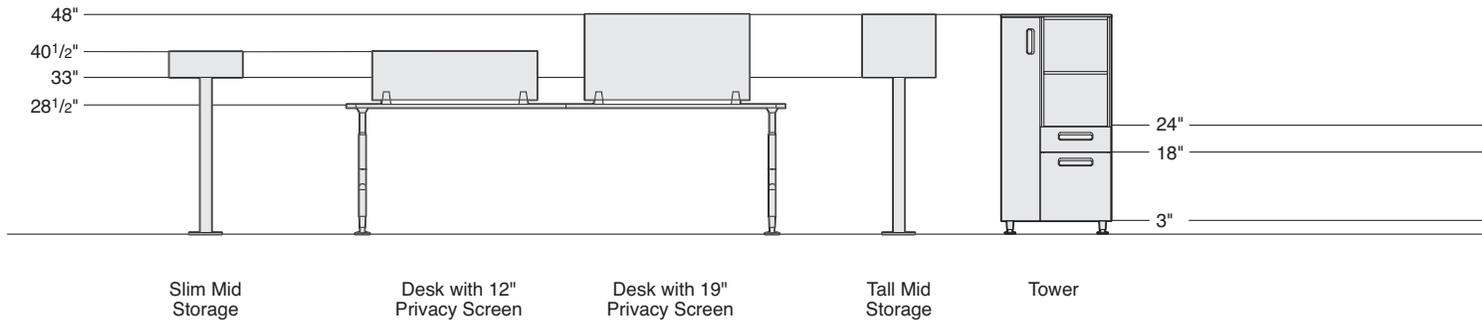

Screen elements include a personal/modesty screen, and a centered screen. The personal/modesty screen can be mounted on the desk (above or below), on low storage, and on the beam. The centered screen is shared between two people and can be mounted on the beam, back-to-back desks, and on back-to-back 1¹/₂-high low storage with a connect zone.

Note: Tower and high ped storage are also available.

Horizontal Sight Lines

Horizontal Sight Lines and Defining the Lower Mass

One of the visual intentions of the c:scape system is to maintain an open and light aesthetic. A considerable means of achieving this visual is by creating a low, floating mass, and by keeping anything above the line of this mass relatively light.

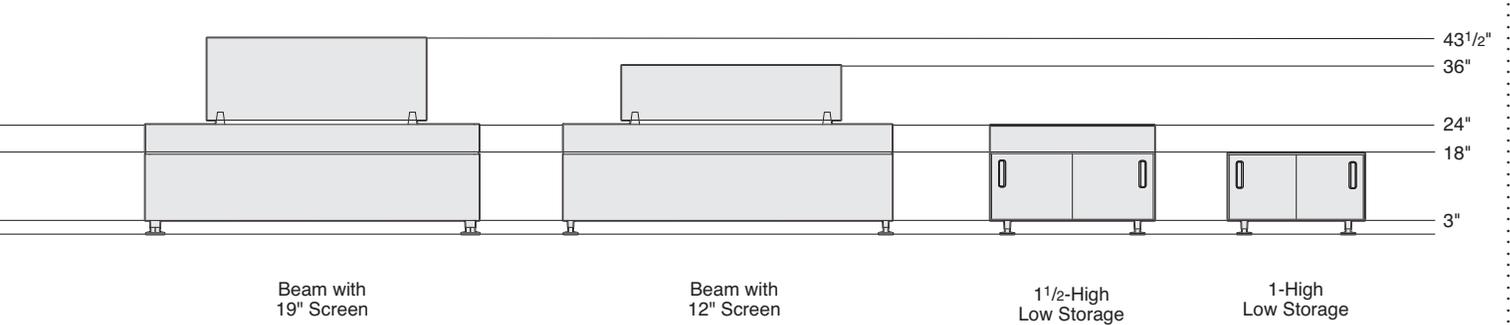

Sight lines are the imaginary lines that run through the vertical space, creating the horizontal continuity that relates the different components to one another and the system as a whole. There are three significant sight lines in the horizontal visual field of c:scape's aesthetic: The "floating" sight line at 3 inches, the lower mass sight line at 24 inches, and the horizontal stripe at 18 inches.

Desking Sight Lines

The tops of the desking system float a few inches above the 24" lower mass sight line. The standard height of the top of surfaces is 28 1/2" from the ground. Six inches of height adjustability are built into the legs of the desking structure. The minimum height of the desk tops is 26" from the ground, which is 2" above the beam and low storage. The maximum height of desk tops from the ground is 32".

Above-the-Beam Sight Lines

There are a variety of components above the 24" lower mass sight line that have visual alignment. Mid storage is mounted on stanchions and vertical columns that float openly over the beam and workspaces. Personal and centered screens are mounted on the beam, desks, and storage to provide varying heights of privacy.

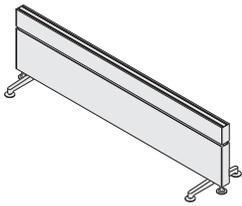

Stability Guidelines

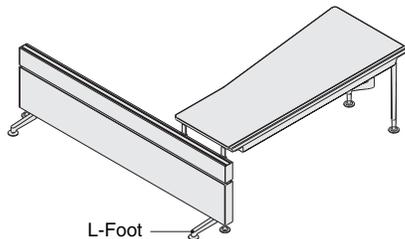

Support feet can connect to the beam in 1 foot increments. There is flexibility in where the foot needs to be placed as long as it doesn't exceed the maximum distance from the end of the beam or between support feet.

Take careful note of aisle way applications where foot is exposed to prevent tripping hazard. It is recommended that the beam foot be inset a minimum of 1 foot from the end of the beam. Mid storage, low storage, or a similar object must be within 18" of the exposed foot.

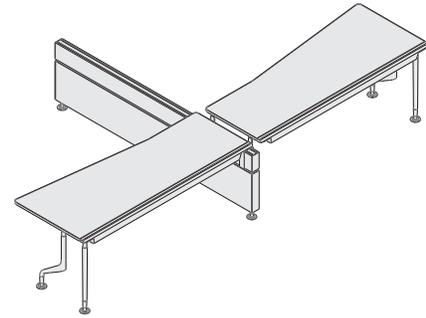

Stabilizing Beams without Mid Storage Mounted Parallel

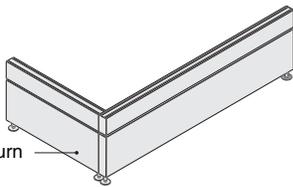

Beam with T-feet

L-Foot
L-foot and tethered desk

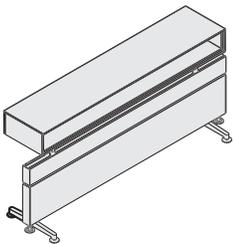

Desks tethered in a symmetrical application.

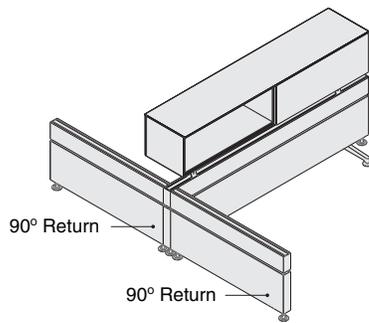

90° Return

Stabilizing Beams with Mid Storage Mounted Parallel

Beam with T-support foot

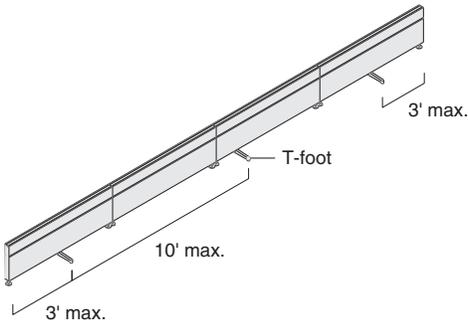

90° Return
90° Return
Beam with two 90° return

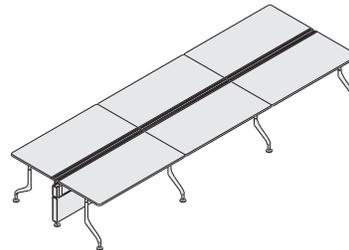

90° Return
L-Foot
Beam with 90° return and L-foot

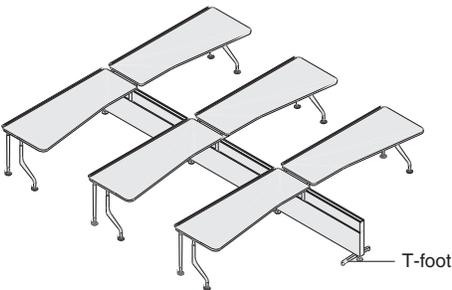

Beams without Mid Storage Mounted Parallel

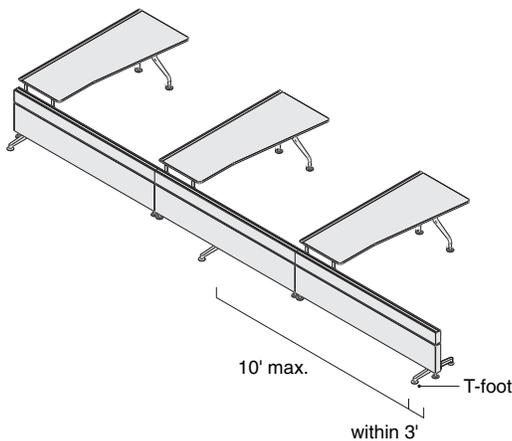

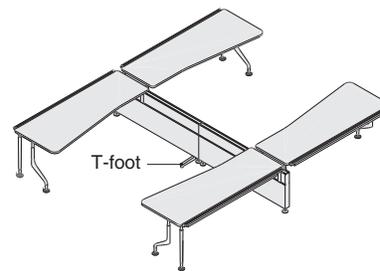

A T-foot is required within 3' from the end of the beam run and every 10' max.

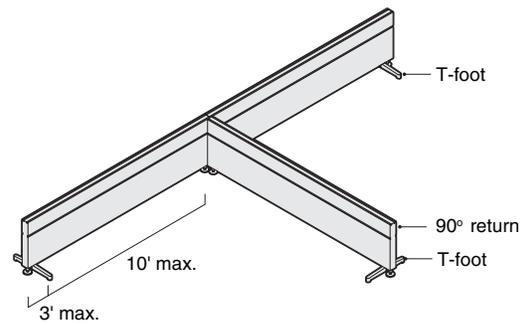

Desking that is tethered to a beam in a symmetrical application eliminates the need of T-feet.

When desking is tethered to the beam in a symmetrical application without mid storage mounted parallel, the desks replace the need for a T-foot. A T-foot must be used, if the desk is more than 3' from the end of the beam run and more than 10' apart.

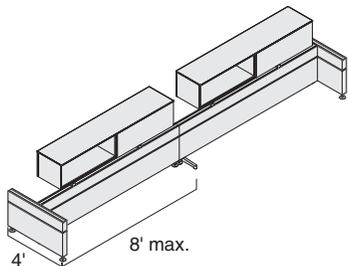

When desk is tethered to the beam in a non-symmetrical application an L-foot is required on opposite side of the beam as the desk and L-foot must be located within 3' from the end of beam and every 10' max.

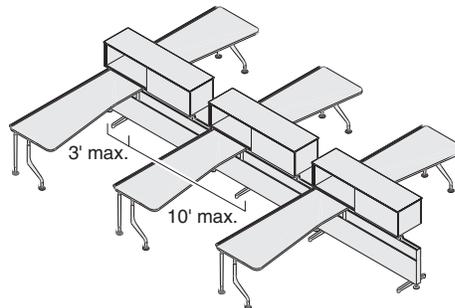

When a beam without mid storage attached parallel is attached 90° to the spine it replaces the need for a T-foot at that location. A T-foot is recommended to support the end of the fin.

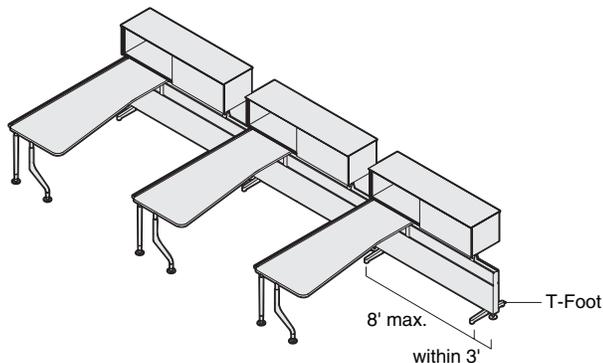

Beams with Mid Storage Mounted Parallel

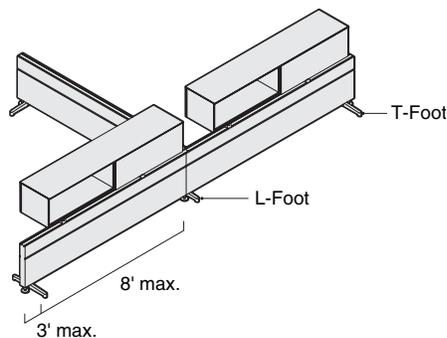

4' beam min.
8' max.
When mid storage is mounted parallel to the beam, and 90 degree beams are specified at the end of the beam run, a minimum of a 4' beam is required, and a T foot is required every 8' max.

When mid storage is mounted parallel to the beam and desks are tethered in a symmetrical application, T-feet are required within 3' from end of the beam run and every 10' max.

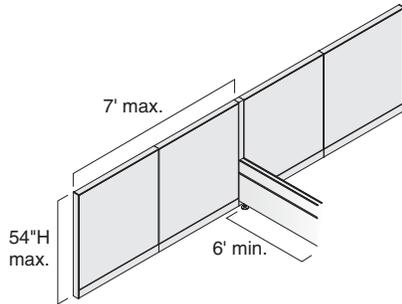

When mid storage is mounted parallel to beam and desking is tethered in a non-symmetrical application, a T-foot is required within 3' of the end of the beam and every 8' max.

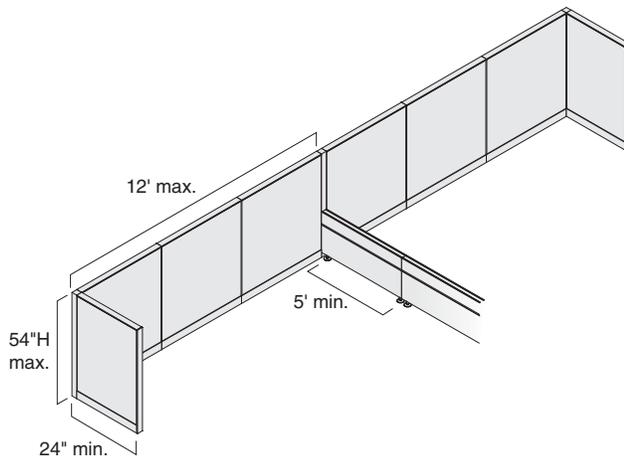

When a beam is attached at 90° to a spine with parallel mid storage, an L-foot is required on the opposite side of the 90° fin.

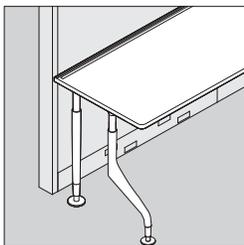

Panel to Beam Junctions on Answer

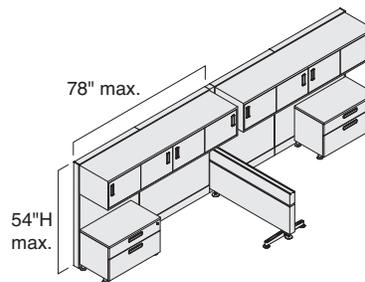

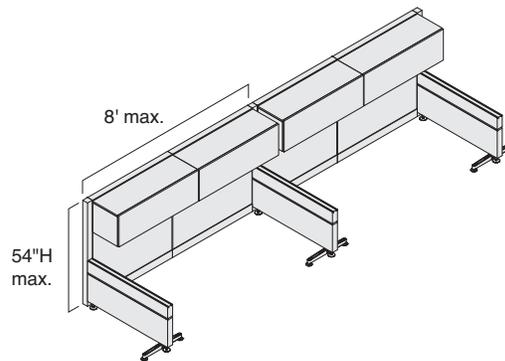

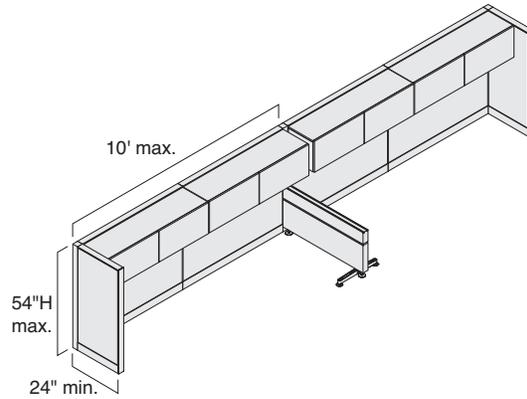

- A 7' run with no panel-hung components does not require a return panel.

- For runs over 7' and up to 12', a 30"W return panel is required.

- Desk-to-panel bracket is available as an option on the junctions to tie the end of the panel run into the understructure of the desk, when parallel to the panel.

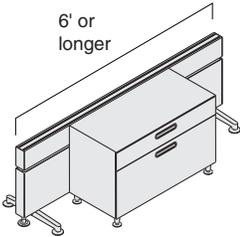

- Panel runs with panel-mounted storage must be supported by a 24"W minimum return panel, a c:scape beam, or a Universal 1.5-High lateral file with a storage-to-panel bracket.

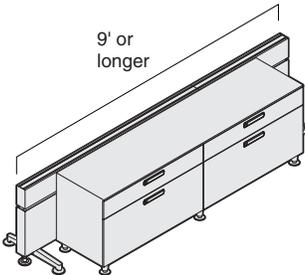

Counterweight Rules

Low storage units with file drawers require a counterweight package. Exceptions to this rule are noted here:

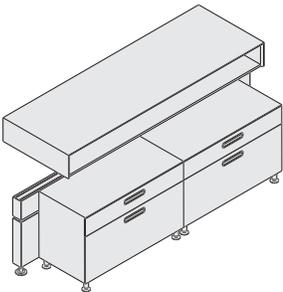

Low storage tethered to a beam:

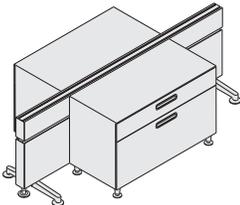

Beam widths must be 6' or larger when one low storage unit that is 48"W or smaller is tethered to beam.

Beam width must be a minimum of 7' when one 60"W unit is tethered to the beam or a minimum of 9' when one 72"W unit is tethered to the beam.

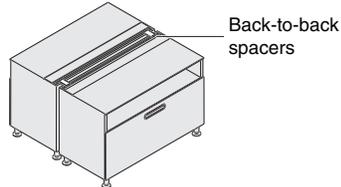

Beams with mid storage mounted parallel: beam length must be equal to or greater than the combined low storage width.

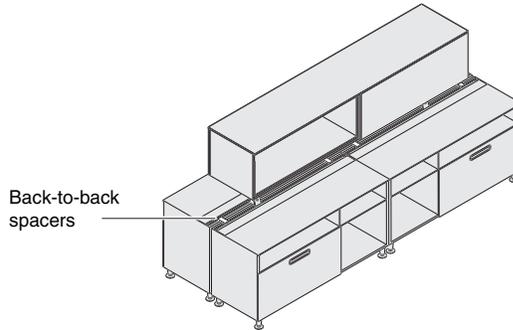

Low storage of equal length tethered to both sides of the beam.

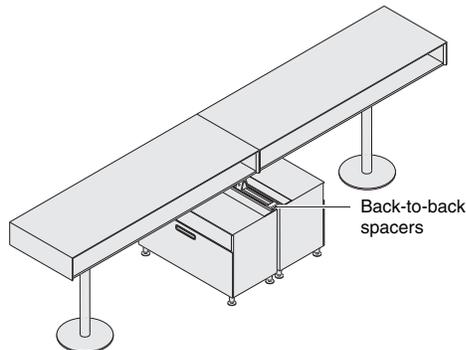

Low storage not tethered to a beam:

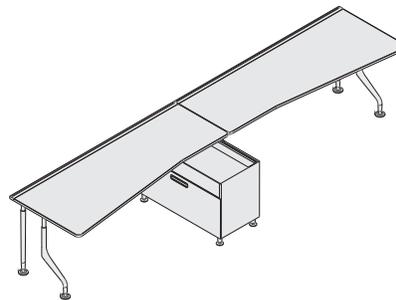

Using back-to-back spacers on units with connect zones.

Low storage in a back-to-back application supporting mid storage.

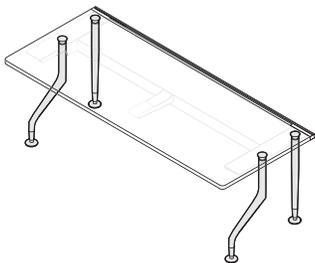

Low storage in a back-to-back application supporting mid storage.

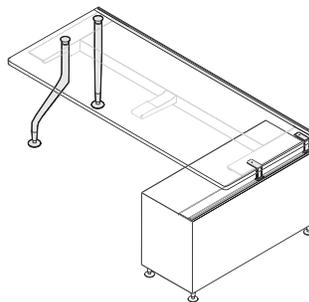

Two desks tethered to one low storage unit.

Desking Supports

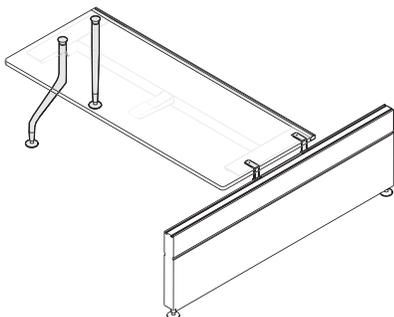

A freestanding desk uses two post legs in the back and two L-legs in the front of the desk. Post legs cannot be used to support the front of a freestanding desk.

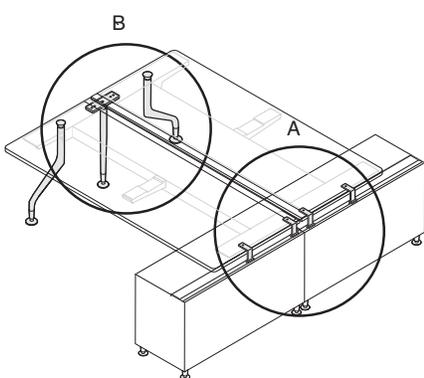

Desks tethered perpendicular to the 1 1/2-high low storage are supported on the storage side by a pair of desk tether brackets.

Tip: 1 1/2-high low storage must have a connect zone to allow for the tethering of a desk.

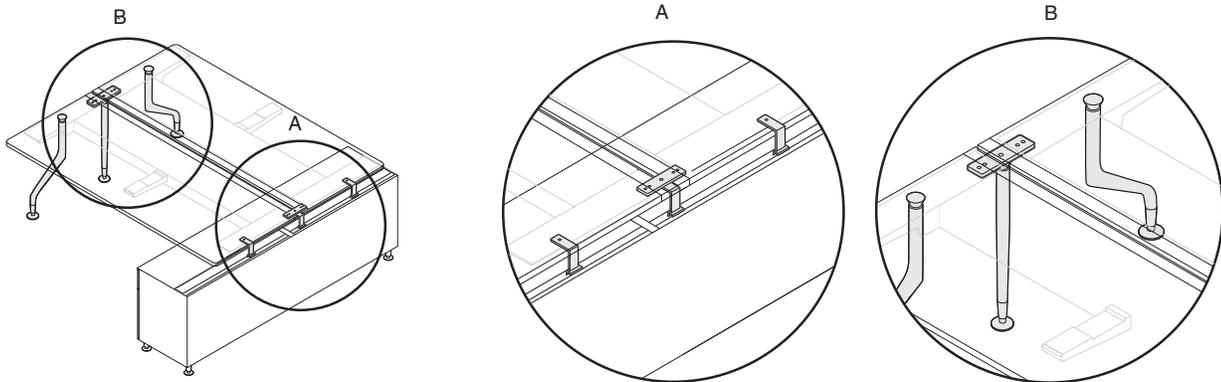

Desks tethered perpendicular to the beam are supported on the beam side by a pair of desk tether brackets.

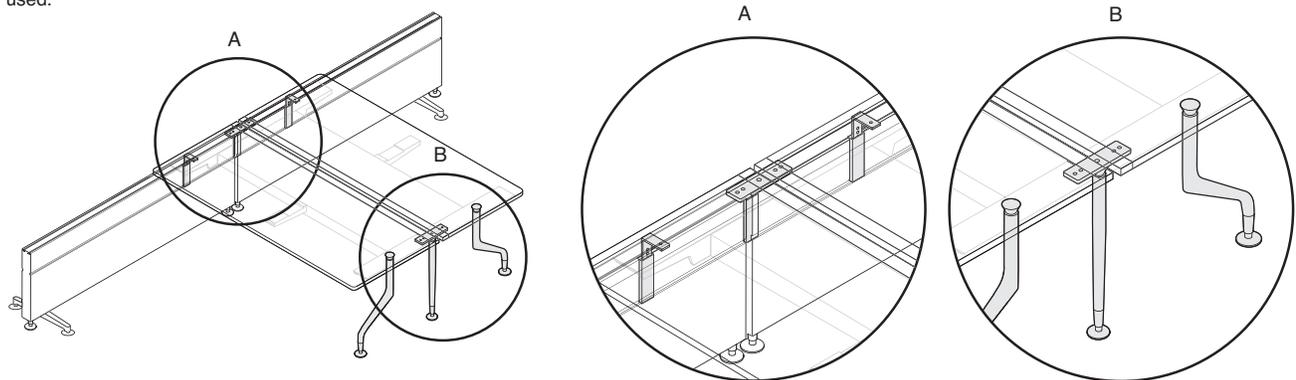

Back-to-back desks tethered perpendicular to 1 1/2-high low storage units that share a leg are supported on the storage side by two pair of desk tether brackets (A). The side away from the beam is supported by two L-legs, one adjustable-height post leg, and one shared support plate (B).

Desking Supports (continued)

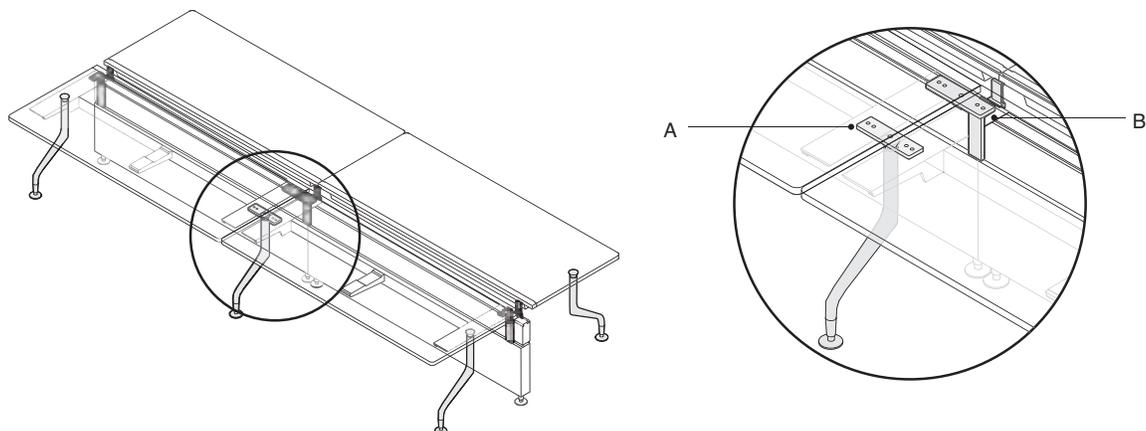

When back-to-back desks are tethered perpendicular in the center of 60"W or 72"W 1 1/2-high low storage, two pair of desk tether brackets are used. If back-to-back desks are tethered 3" or more off the center, one pair of desk tether brackets plus one desk tether bracket and shared support plate combination are used.

Back-to-back desks tethered perpendicular to a beam that share a leg are supported on the beam side by one pair of desk tether brackets, one desk tether bracket, and shared support plate combination (A). The side away from the beam is supported by two L-legs, one adjustable-height post leg, and one shared support plate (B).

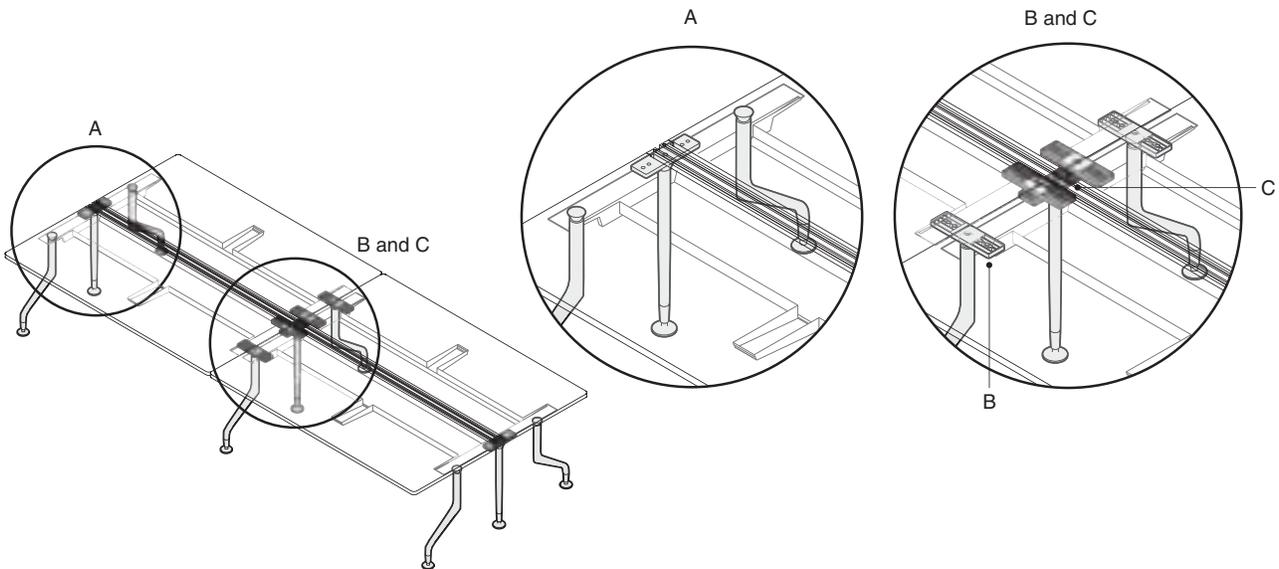

Tip: When using a shared support plate to share a leg between two desks, an adjustable-height leg must be used.

Tip: Desks can be either flush to each other or create a 1" space between the desks. The 1" space is required between desks for the mounting of centered screens. Back-to-back spacers are required when mounting centered screens.

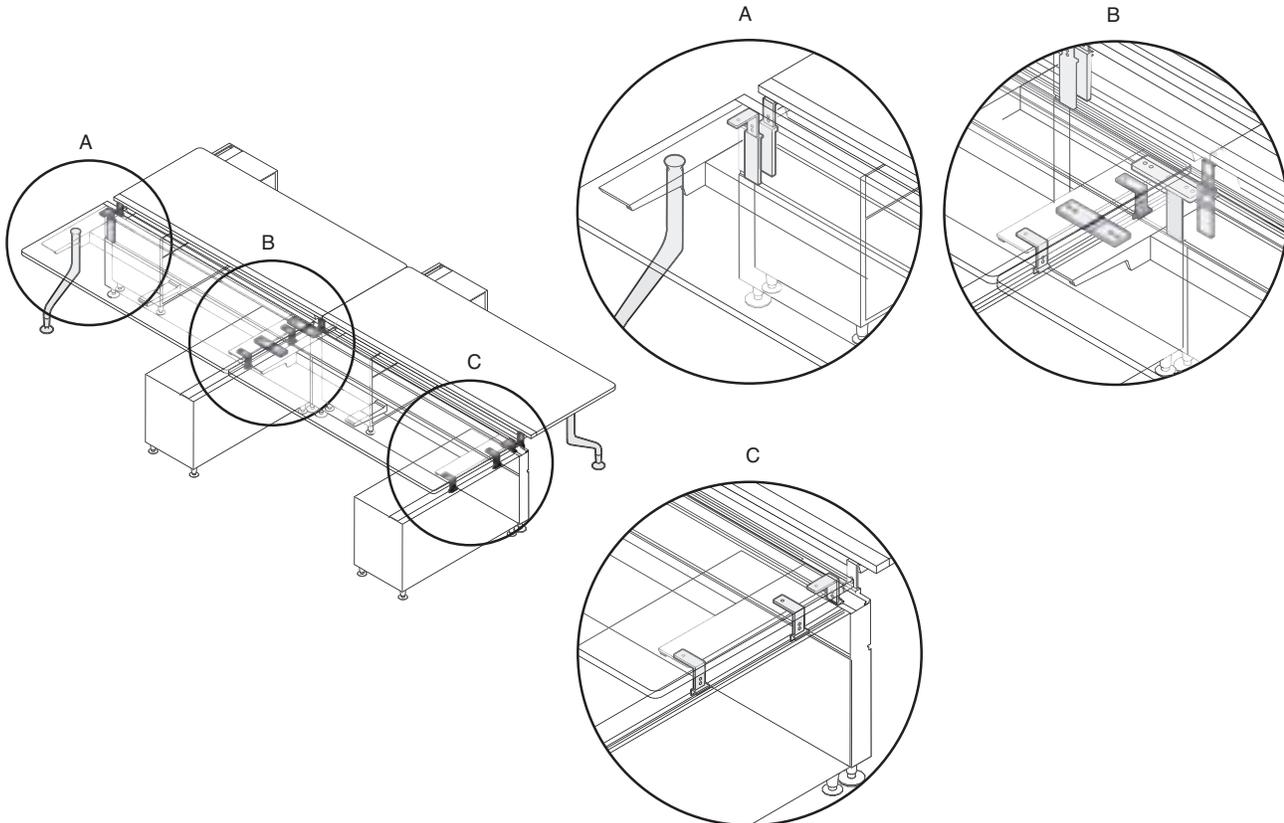

Adjacent desks tethered parallel to the beam in a benching application can be supported in the front by either an L-leg or a post leg. Desks can share an adjustable-height leg with a shared support plate (A). The desks are supported in the back by the beam with a desk tether bracket and shared support plate combination (B). An additional pair of desk tether brackets are used to support the far ends of the desks, one bracket at each end.

Desking Supports (continued)

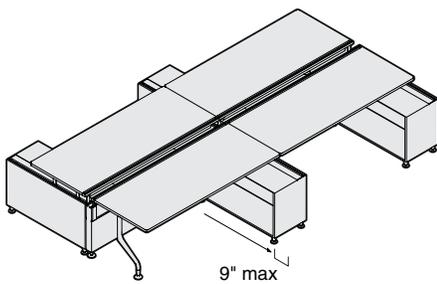

Adjacent desks in a bench application without a beam can share supports. Two back-to-back desks are supported by two L-legs, one adjustable-height post leg, and one shared support plate (A). Adjacent desks can be supported in front by either an adjustable-height post leg or an L-leg with a shared support plate (B). The desks are supported in the back by three shared support plates and an adjustable-height post leg (C).

Desking Supports (continued)

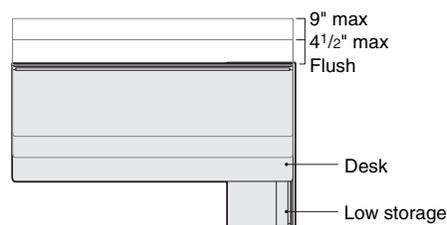

Desks tethered parallel to the beam in a benching application can be supported by 1½-high storage with a connect zone. The back of the desk is attached to the beam with a desk tether bracket (A). Adjacent desks are supported in the front by a pair of desk tether brackets, a shared support plate, and the back is supported by the beam with a desk tether bracket and shared support plate combination (B). When storage is located at the end of a run, the desk is supported by a pair of tether brackets located in the storage unit and an optional desk tether bracket can connect the back of the desk to the beam (C).

When low storage is used as a support for the desk in a bench application the low storage unit can be:

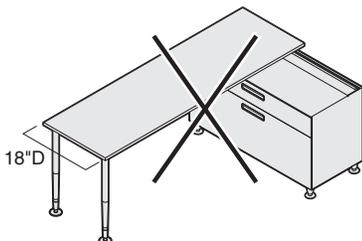

- flush with the beam, if at the end of the run
- ½" gap between beam and low storage to allow room for a tether bracket on the beam
- 1½"-9" max in 1½" increments away from the beam
- low storage can not be used as a front support if it is more than 9" away from the beam

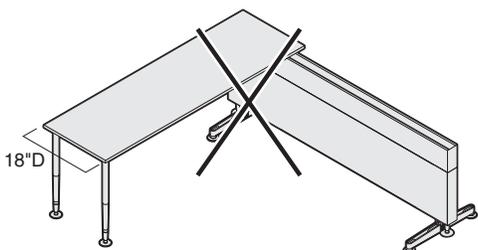

When desk is tethered to low storage in a freestanding application the back edge of the desk can overhang the edge of storage up to 4½" without any additional desk support. If the desk overhangs the edge of the low storage by more than 4½" a post leg is required to support the back corner of the desk.

Universal Systems Worksurfaces Tethered to c:scape

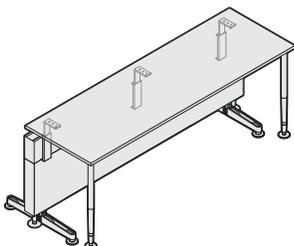

Tether bracket kits for use with Universal Worksurfaces have been created. These tether bracket kits must be used when tethering Universal Systems Worksurfaces to c:scape beams and low storage. Universal legs must be used to support the end of the worksurface that is not tethered. See additional application rules below. Universal Worksurfaces stability guidelines must also be followed for reinforcing channels.

18"D Universal Systems Worksurfaces cannot be tethered perpendicular to low storage.

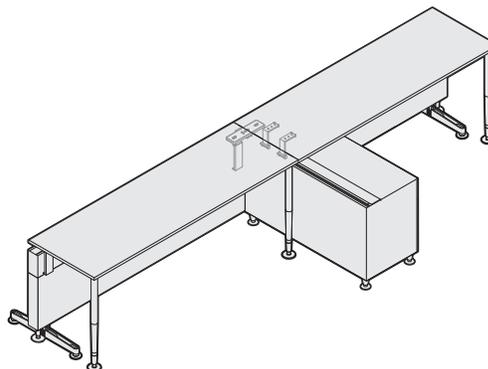

18"D Universal Systems Worksurfaces cannot be tethered perpendicular to beams.

Universal Worksurfaces wider than 72"W require a third tether bracket for additional support in the middle or within 6" of the middle. Worksurfaces with a power and data access cutout must have a third tether bracket placed 18"—20" to either side of the middle.

Knife edge worksurfaces wider than 72"W cannot be mounted parallel to the beam.

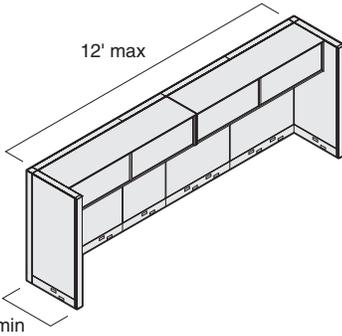

Universal systems worksurfaces tethered parallel to the beam in a benching application can be supported by 1 1/2"-high low storage with a connect zone. The back of the desk is attached to the beam with a desk tether bracket. Adjacent desks are supported in the back with a desk tether bracket and shared support plate combination. A pair of tether brackets mounted in the low storage support the front of the desk on the right. A post leg is required to support the front of the worksurface on the left.

Guidelines for Panel Mount Mid Storage on Privacy Wall/Answer and Montage

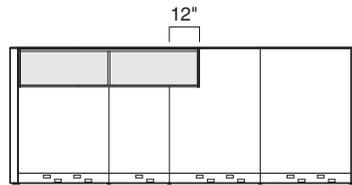

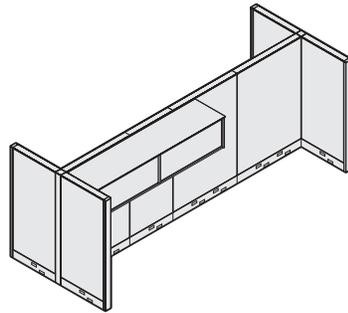

General Guidelines (All Applications)

c:scape mid storage can be mounted on Privacy Wall, Answer, and Montage panels.

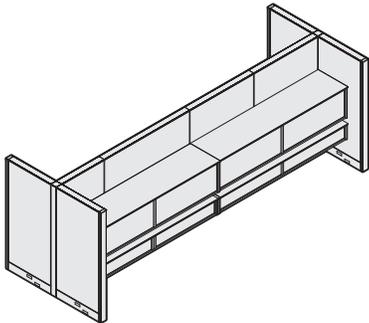

All mid storage units **must span two panels** to allow an attachment to be made near the center for proper structural support.

Panel runs for mounting mid storage side by side are limited to 12' maximum.

Mid storage mounts on-module, but has the ability to mount off-module by 12" total—12" one end or 6" both ends (i.e. a 72"W mid storage on two 30"W panels).

The top surface of all mid storage **must be mounted at least 38" from the floor.**

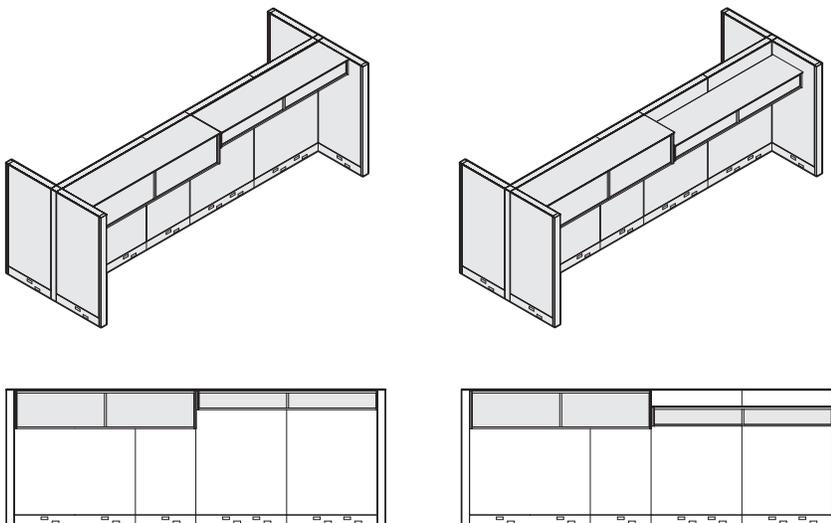

Guidelines for Panel Mount Mid Storage on Privacy Wall/Answer and Montage (continued)

Answer and Privacy Wall Specific Guidelines

Mid storage panel mount solutions are **not for use on Kick panels.**

Cannot mount c:scape mid storage on a stacked Answer panel.

Up to two mid storage units can be mounted (one above the other) on Answer and Privacy Wall, up to 12' maximum run.

(Mounted side by side, tall and slim mid storage can be aligned to each other across the top surfaces, but cannot be aligned across the bottom surfaces) (mismatch will be 1/4" higher or 3/4" lower).

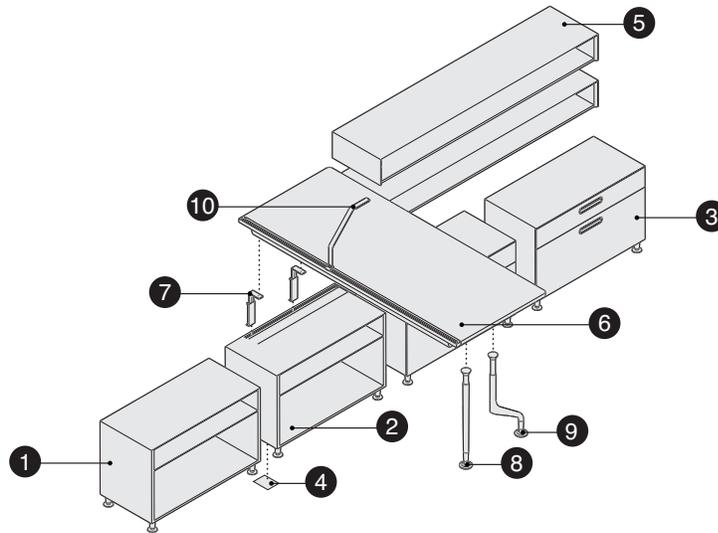

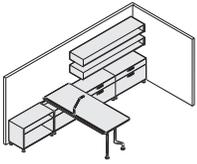

Montage Specific Guidelines

Standard 65"H Montage frames will accept tall mid storage at the top of the panel without modification.

Special 65"H frames must be ordered for mounting slim mid storage at the top of the panel.

All frame heights, other than 65"H (see above), require special frames for mounting tall or slim mid storage in any position, **but must be at least 38" from the floor.**

Most products on this page are the SOTO collection by Details. They are included here to simplify your planning. Remember that Details has different pricing terms. They are ordered through Details electronic catalog (DET).

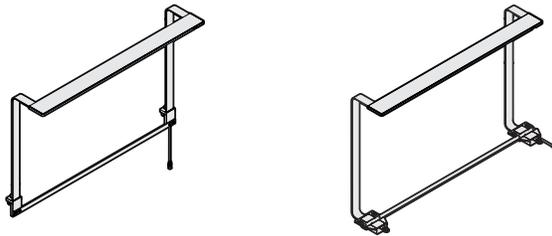

Tip: SOTO stands for State of the Office.

Personal task lights

offer end users added control and adjustability to place the proper amount of personal lighting to create a holistic worksetting. Ideally suited for rail-mount, desk, or freestanding applications.

LED Lights

LED Personal Task Lights

Mounting

- Rail-mounted attaches directly to rail systems in c:scape, FrameOne, Elective Elements, Impact, Turnstone Campfire Big Table, and Details SOTO Rail. The non rail-mounted version attaches to most freestanding desks and tables.
Tip: Non rail-mounted LED personal task lights will not work on worksurfaces with knife edge that is longer than 1 1/4", or with modesty panels or modesty screens closer than 6" from the back edge.

Description

Intended to be a primary light source, LED personal task light covers the user's active work zone with a smartly-designed array of light. The light is specifically designed to direct light where it is needed. Energy efficient at only 14 watts, LED personal task light is engineered to have a useful life of over 50,000 hours. It attaches directly to the rail systems of c:scape, FrameOne, Impact, Elective Elements, Turnstone Big Table, and Details SOTO Rail. A non-rail-mounted version attaches to freestanding desks and tables.

Finish Options

- Fixture and stanchions, paint: 4710 Low Gloss Black, 4799 Platinum Metallic, 4231 Arctic White. Plastic cover Arctic White (6009) only.

Optics

- Polycarbonate matte film

Ballasts

- Energy saving low-voltage power supply

Electronic Dimmer

- Standard on all lights

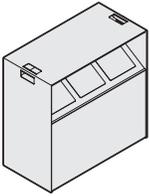

Average Rated Lamp Life

- 50,000 hrs.

Warranty

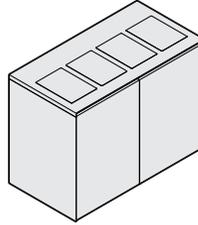

- Power supply - 5 years
- Fixture - 12 years

Beams

Beam is 24"H and is available in widths of 4, 5, 6, 7, and 8 feet. The beam provides boundary, building interface and distribution of power and data, tethering of desks, and mounting of mid storage and screens.

► Specifying, page 84

Distribution of data occurs through the beam's upper opening of the vertical post.

Distribution of power occurs through the beam's lower opening of the vertical post.

Lower cover clips allow for lay in of data cables.

Glides are 3" in diameter with 2" of glide adjustment for uneven floors.

Upper rail is anodized aluminum. It has two channels which allow the tethering of desks, upmounting of mid storage, and attachment of screens.

Upper cover clips assist with cable and conduit management.

Beams can be connected inline to create longer beam runs.

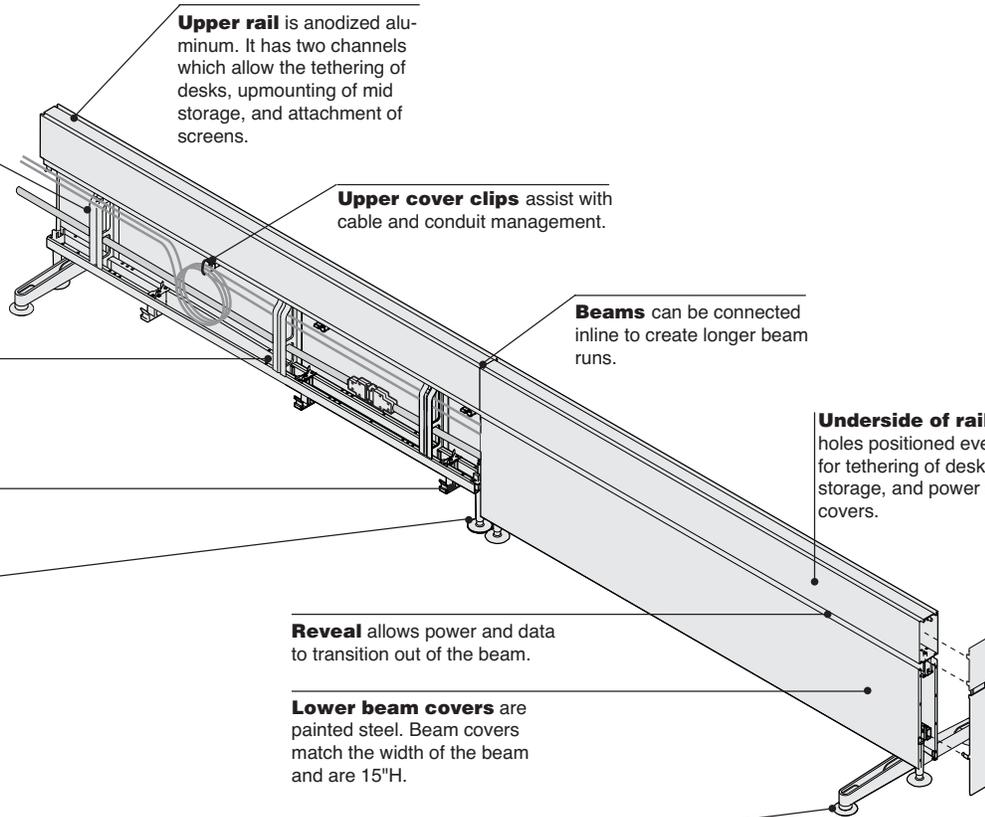

Underside of rail has holes positioned every 1 1/2" for tethering of desks, low storage, and power and data covers.

Reveal allows power and data to transition out of the beam.

Lower beam covers are painted steel. Beam covers match the width of the beam and are 15"H.

Support feet are available in L- and T-versions and support the beam run. Support feet are ordered separately.

► See *Beam Accessories*, page 85

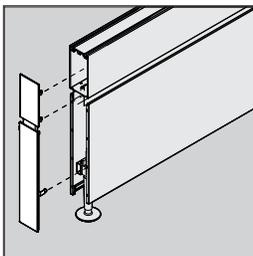

Actual Dimensions

Depth 3"

Width 4', 5', 6', 7', or 8'

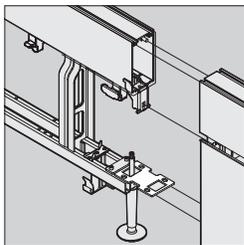

Height 24"

Product Details

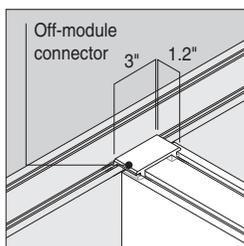

End-of-run trim covers the ends of beam runs. The upper portion is anodized aluminum and the lower portion is painted plastic to match the beam covers. End-of-run trim is ordered separately.

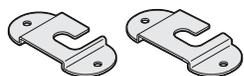

Connections

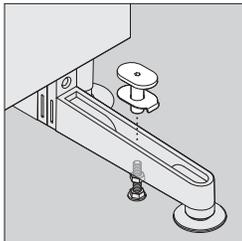

Inline connector kit connects two beams in line to create longer beam runs. Connector is ordered separately.

90° off-module connector kit connects two beams perpendicular to each other. Connections can be made along the face of the beam rail every 1½". A 3" dead zone is created in the top channel of the spine beam, and a 1.2" dead zone is created on the 90° beam. Consider these dead zones when using the channel for other attachments. Connector is ordered separately.

Floor anchor brackets are available to secure the beam to the floor to prevent movement for power infeed applications as dictated by local codes.

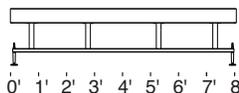

Seismic anchor brackets secure the beam support feet to the floor in seismic zones. Brackets are ordered separately in a package of two, two for each T-support foot.

In some applications, using mid storage, additional stanchions may be required. Contact your local code authorities.

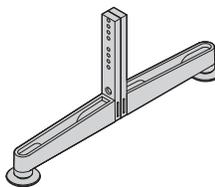

Wiring and Cabling

Interface with building floor occurs along the beam run in 12" increments.

Interface with building using a utility pole occurs at the end of beam runs.

Access to power and data can occur in the base. Power and/or data can be placed every 12". Where two beams are connected inline, access zones are 24" apart.

Support feet can be placed every 12" using the same locations as power and data. An additional position is available at the ends of beams.

Tip: Power, data, or support feet cannot occupy the same position simultaneously.

Surface Materials

Upper beam rail

- Anodized aluminum

Lower beam covers

- Painted steel

Glides

- Plastic - Platinum

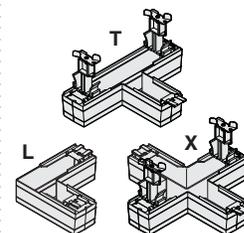

Support feet

- Platinum

End-of-run trim

- Painted plastic

Application Topics

A transition boot is required when transitioning power and small quantities of data at a 90° connection. Transition boot is ordered separately.

- ▶ See *Cable Capacities*, page 156

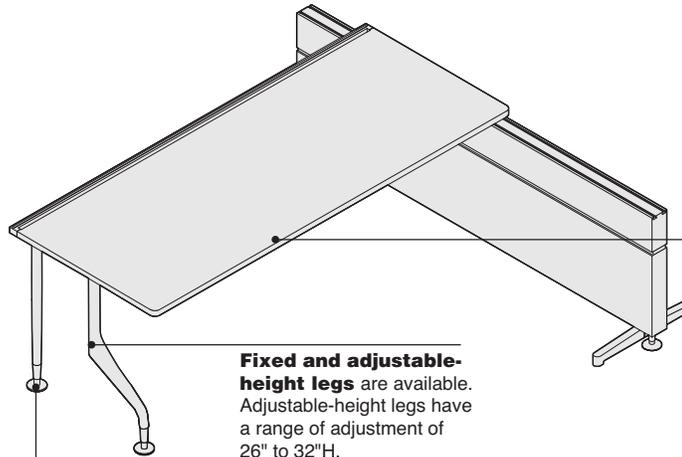

Field-cutting of lower cover may be required when transitioning power and larger quantities of data at a 90° connection. Field-cut transition kit is ordered separately.

- ▶ See *Cable Capacities*, page 156

Desking

Desking offers three surface shapes: straight, tapered, and transition. Surfaces are 3/4" thick with a wood core and are supported by an understructure. The surface of the desk slides forward to reveal the connect zone which accommodates easy access of power, data, and cord management. Desks can be freestanding, tethered to the beam perpendicular or parallel, or tethered to 1 1/2-high low storage with a connect zone.

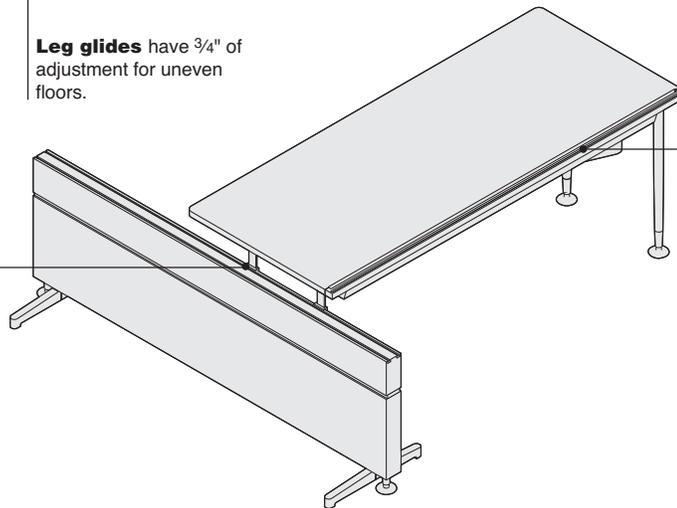

► Specifying, page 88

Fixed and adjustable-height legs are available. Adjustable-height legs have a range of adjustment of 26" to 32"H.

Front (user's) edge and sides are available in 3 mm edge banding on laminate surfaces and 1 mm on back. Wood veneer desks have a 3 mm edge on the front (user's) edge and 1 1/2 mm edge banding along the sides and back.

Leg glides have 3/4" of adjustment for uneven floors.

Rail on understructure allows for the mounting of personal/modesty screens above or below the desk. The top rail allows for the mounting of c:scape worktools by Details.

Desk tether brackets

attach desks to beam in parallel or perpendicular applications. Brackets are also used to tether desks to 1 1/2-high low storage with a connect zone.

Straight

Tapered

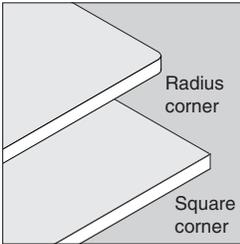

Transition

Actual Dimensions

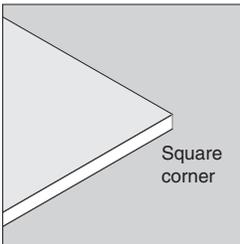

Depth	24" or 30"
Width	60", 66", 72", 78", or 84"
Thickness	3/4"

Product Details

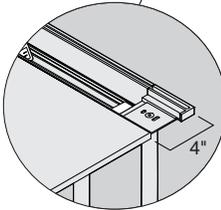

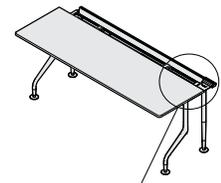

Laminate surfaces are available with square or radius corners. The edges are plastic and finish selection is required.

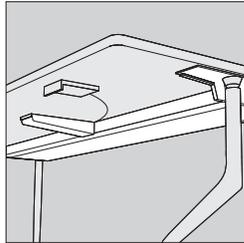

► See *Surface Materials*, page 195.

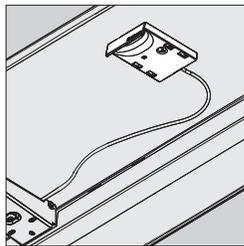

Veneer surfaces have square corners. The edges are veneer and match the top surface.

Desk connect zone provides access to power and data, along with a place to store and manage cords. The desk surface slides forward to reveal the connect zone. Desktop slides a total of 4" towards the user.

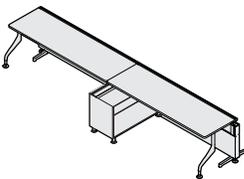

Desk understructure supports the surface and allows for easy attachment of legs, tether brackets, keyboard assemblies, and vertical processor slings.

Release handle on underside of surface is always located on the right-hand side and unlocks the desk surface to allow it to slide forward to reveal the connect zone.

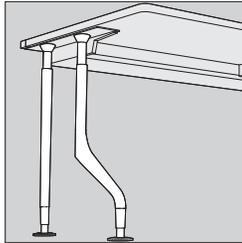

Connections

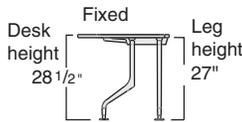

Desks can be tethered parallel to the beam to create a bench application. Adjacent desks must be flush with each other and at the same height. Legs or 1½-high low storage with a connect zone can be used to support the front of desks.

When tethered to beam, the edge of desk is flush to the edge of beam.

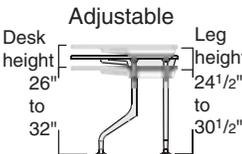

Legs, ordered separately, attach to the understructure of the desk. Post and L-legs are available as fixed or adjustable.

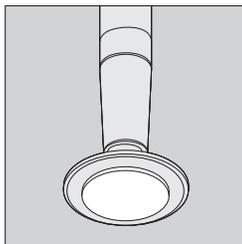

Fixed-height legs place the desk surface at 28½" high.

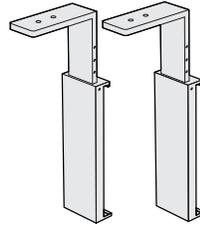

Underside of desk to floor equals 24⁷/₁₀" of space.

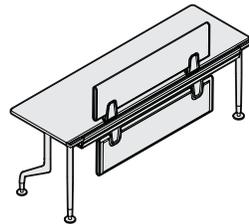

Adjustable-height legs allow the desk to be adjusted from 26" to 32"H in ½" increments.

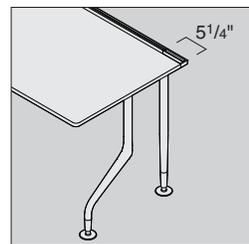

Glide pads, for use on desk legs, are available for use on non-carpeted floors to help minimize movement. They can also be used on storage glides. Glide pads are ordered separately.

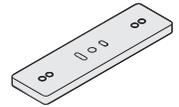

Desk tether brackets are adjustable and attach desks to the beam in both perpendicular and parallel applications. When attached to the beam, and no low storage is placed beneath the desk, range of adjustment on the tether brackets allows the desk to be adjusted from 26" to 32" in ½" increments. When attached to low storage, range of adjustment on the tether brackets allows the desk to be adjusted from 28" to 32" in ½" increments.

Rail on desk understructure allows for the attachment of personal/modesty screens, centered screens in back-to-back applications, and c:scape worktools by Details. Rail is standard on all desks.

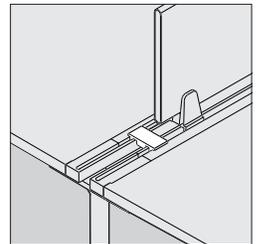

Each end of desk has a 5¼" dead zone which prohibits the attachment of privacy screens and worktools.

Shared support plate is used in benching and back-to-back applications to share a leg or tether bracket. Shared support plate is available as a separate style number or with one tether bracket. When a support plate is used to share a leg, an adjustable leg must be used.

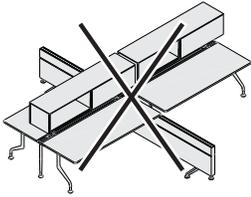

Back-to-back desking applications that are tethered to the beam require the use of the desk tether bracket and shared support plate combination to create the required 1" spacing between desks to mount centered screens. The 1" space cannot be achieved in this application without the use of the shared support plate to share a tether bracket between the two desks.

Back-to-back spacer is used to align desks when placed back to back. The spacer maintains the required 1" spacing between desks to mount centered screens. It can also be used when two 1½-high low storage units with connect zones are placed back-to-back creating the same spacing to mount centered screens.

Tip: To achieve the 1" spacing in back-to-back applications, (to mount centered screens), the use of both shared support plates and back-to-back spacers are required.

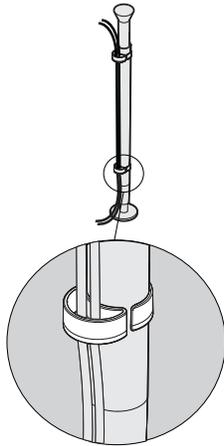

► See *Stability Guidelines, Desking Supports* page 15.

Mid storage cannot mount on back-to-back desks.

Wiring and Cabling

Power and data components are ordered separately and can be placed within the desking connect zone for easy user access. Two to six outlets can be specified, and up to four data cables can be routed to the desk.

Wire managers are available to route cords up the post leg to the connect zone or desk surface.

Power can be daisy chained in benching applications.

Data cables can route from one desk to the next.

Application Topics

Desk height of 28" or higher allows layering of both 1-high and 1½-high low storage under the desk. Desk heights less than 28" allows layering of 1-high low storage units. If desk has modular power entering from beam, storage connect zone door cannot fully open.

Desk height must be at 28½"H to open the connect zone in low storage when supporting two desks parallel to the beam with one low storage unit.

Monitor arms should only be mounted to desks that are either tethered to the beam, the back of another desk, or 1½-high low storage. Large objects should not be mounted to the backside of a freestanding desk.

Desking – Non-Sliding

Desking offers three surface shapes: straight, tapered, and transition. Surfaces are 3/4" thick with a wood core and are supported by an understructure. Desks can be freestanding, tethered to the beam perpendicular or parallel, or tethered to 1 1/2-high low storage with a connect zone. ▶ Specifying, pages 93-96

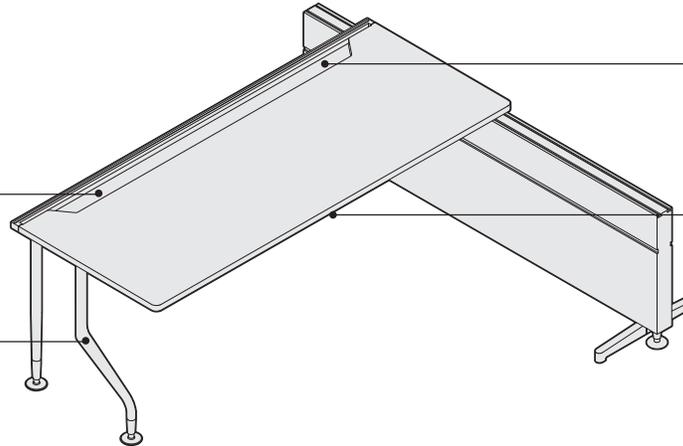

The cut-out provides access to the connect zone which accommodates easy access to power, data, and cord management.

Fixed and adjustable-height legs are available. Adjustable-height legs have a range of adjustment of 26" to 32"H.

The scallop provides a place to tuck cords to eliminate clutter on the desk top.

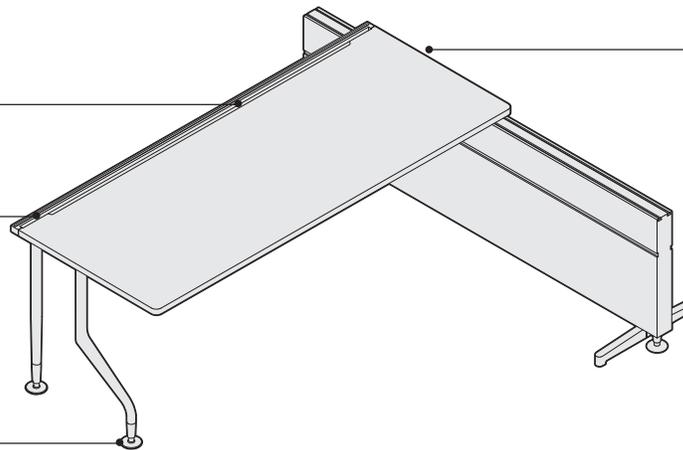

Rail on understructure allows for the mounting of personal/modesty screens above or below the desk. The top rail allows for the mounting of c:scape worktools by Details.

Leg glides have 3/4" of adjustment for uneven floors.

Desk liner, included with cut-out version, provides a soft landing pad for personal objects.

Front (user's) edge and sides are available in 3 mm edge banding on laminate surfaces and 1 mm on back.

Desk tether brackets attach desks to beam in parallel or perpendicular applications. Brackets are also used to tether desks to 1 1/2-high low storage with a connect zone.

Straight

Tapered

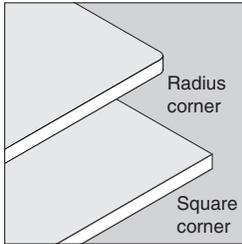

Transition

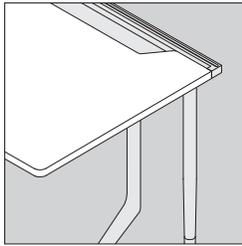

Actual Dimensions

Depth	24" or 30"
Width	60", 66", 72", 78", or 84"
Thickness	3/4"

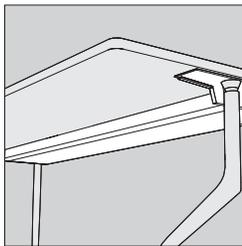

Product Details

Laminate surfaces are available with square or radius corners. The edges are plastic and finish selection is required.
 ▶ See *Surface Materials*, page 195.

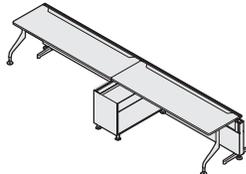

Desk with cut-out provides access to power and data, along with a place to store and manage cords.

Desk understructure supports the surface and allows for easy attachment of legs, tether brackets, keyboard assemblies, and vertical processor slings.

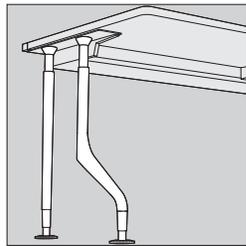

Connections

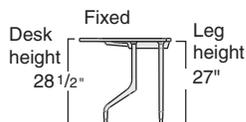

Desks can be tethered parallel to the beam to create a bench application. Adjacent desks must be flush with each other and at the same height. Legs or 1½-high low storage with a connect zone can be used to support the front of desks.

When tethered to beam, the edge of desk is flush to the edge of beam.

Legs, ordered separately, attach to the understructure of the desk. Post and L-legs are available as fixed or adjustable.

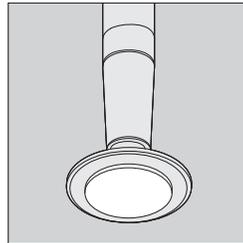

Fixed-height legs place the desk surface at 28½" high.

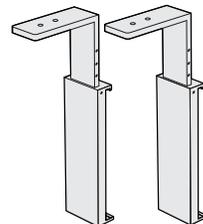

Underside of desk to floor equals 24⁷/₁₀" of space.

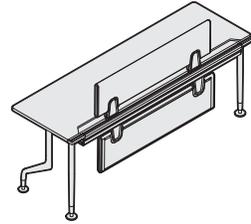

Adjustable-height legs allow the desk to be adjusted from 26" to 32"H in ½" increments.

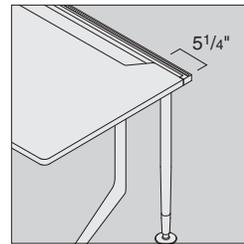

Glide pads, for use on desk legs, are available for use on non-carpeted floors to help minimize movement. They can also be used on storage glides. Glide pads are ordered separately.

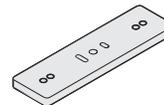

Desk tether brackets are adjustable and attach desks to the beam in both perpendicular and parallel applications. When attached to the beam, and no low storage is placed beneath the desk, range of adjustment on the tether brackets allows the desk to be adjusted from 26" to 32" in ½" increments. When attached to low storage, range of adjustment on the tether brackets allows the desk to be adjusted from 28" to 32" in ½" increments.

Rail on desk understructure allows for the attachment of personal/modesty screens, centered screens in back-to-back applications, and c:scape worktools by Details. Rail is standard on all desks.

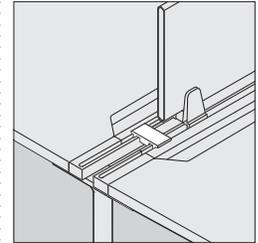

Each end of desk has a 5¼" dead zone which prohibits the attachment of privacy screens and worktools.

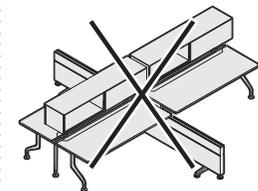

Shared support plate is used in benching and back-to-back applications to share a leg or tether bracket. Shared support plate is available as a separate style number or with one tether bracket. When a support plate is used to share a leg, an adjustable leg must be used.

Back-to-back desking applications that are tethered to the beam require the use of the desk tether bracket and shared support plate combination to create the required 1" spacing between desks to mount centered screens. The 1" space cannot be achieved in this application without the use of the shared support plate to share a tether bracket between the two desks.

Back-to-back spacer is used to align desks when placed back to back. The spacer maintains the required 1" spacing between desks to mount centered screens. It can also be used when two 1½-high low storage units with connect zones are placed back-to-back creating the same spacing to mount centered screens.

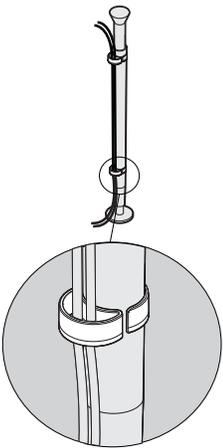

Tip: To achieve the 1" spacing in back-to-back applications, (to mount centered screens), the use of both shared support plates and back-to-back spacers are required.
 ▶ See *Stability Guidelines, Desking Supports* page 15.

Mid storage cannot mount on back-to-back desks.

Wiring and Cabling

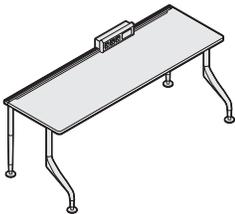

Power and data components are ordered separately and can be placed within the desking connect zone on desks with cut-out for easy user access. Two to six outlets can be specified, and up to four data cables can be routed to the desk.

Wire managers are available to route cords up the post leg to the connect zone or desk surface.

Power can be daisy chained in benching applications.

Data cables can route from one desk to the next.

Desk with scallop can accommodate a power strip with rail-mount bracket mounted on the rail. Modular power and power strip for desk connect zone cannot be used with the scallop option.

Desk height of 28" or higher allows layering of both 1-high and 1½-high low storage under the desk. Desk heights less than 28" allows layering of 1-high low storage units. If desk has modular power entering from beam, storage connect zone door cannot fully open.

Desk height must be at 28½"H to open the connect zone in low storage when supporting two desks parallel to the beam with one low storage unit.

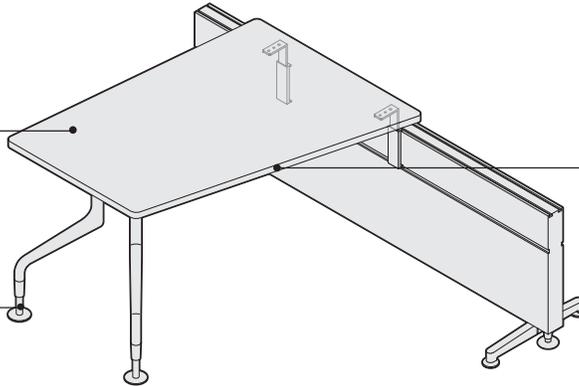

Monitor arms should only be mounted to desks that are either tethered to the beam, the back of another desk, or 1½-high low storage. Large objects should not be mounted to the back-side of a freestanding desk.

Shared Tables – Tapered and D-Shaped

Shared tables support small team, collaborative meeting spaces. The tables are offered in tapered or D-shaped shapes. Surfaces are 1³/₁₆" thick with a wood core. Tables can be free-standing, tethered to the beam, or tethered to 1¹/₂-high low storage with a connect zone.
 ▶ Specifying, page 102

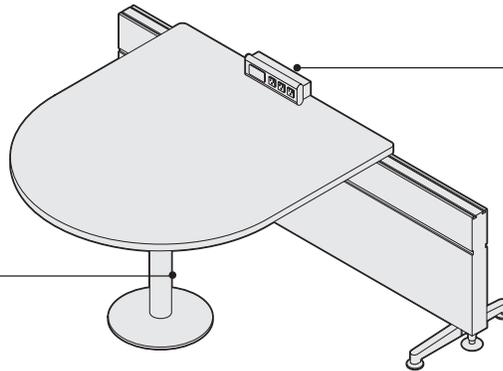

Tops are available in both laminate and veneer.

Leg glides have 3/4" of adjustment for uneven floors.

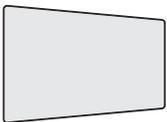

Surfaces have a 3 mm edge banding along all sides.

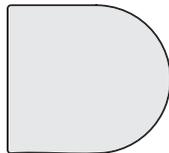

Supports include fixed height L-legs, fixed height post legs, or a column.

Power and data strip includes three simplex receptacles and space for customer supplied voice/data outlets. Power strip is not included with the table and needs to be specified separately.

Tapered

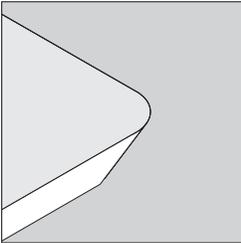

D Shape

Actual Dimensions

Depth	42", 48", or 60"
Length	48", 54", 60", 66", 72", or 78"
Thickness	1 ³ / ₁₆ "

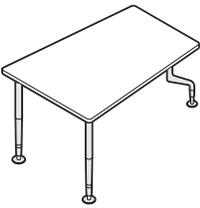

Product Details

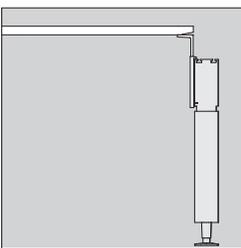

Laminate surface edges are plastic and finish selection is required.

▶ See *Surface Materials*, page 195.

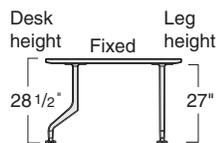

Veneer surface edges are veneer and match the top surface.

Supports are specified as options to the shared table. Tables can be tethered with fixed post legs, L-legs, or a column. Tables can also be freestanding with four post legs or two post legs and two L-legs.

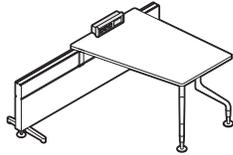

When tethered to beam, the edge of desk is flush to the edge of beam.

Fixed-height legs place the desk surface at 28 1/2" high.

Wiring and Cabling

Power and data strip or power only strip is ordered separately. The strip clamps to the back edge of the shared table.

Mid Storage

Mid storage accommodates standard binders and Details worktools. It is available in tall and slim versions. The storage allows for easy visual management and access to information. Mid storage can be mounted parallel or perpendicular to the beam or it can be wall mounted on drywall, Privacy Wall, Answer, and Montage, and V.I.A.
 ▶ Specifying, page 106

Stanchions are ordered separately. The same stanchions are used to mount mid storage parallel or perpendicular mirrored.

Inline sliders, optional, provide closure to tall mid storage. Inline sliders are standard non-locking. Locking is available as an option.

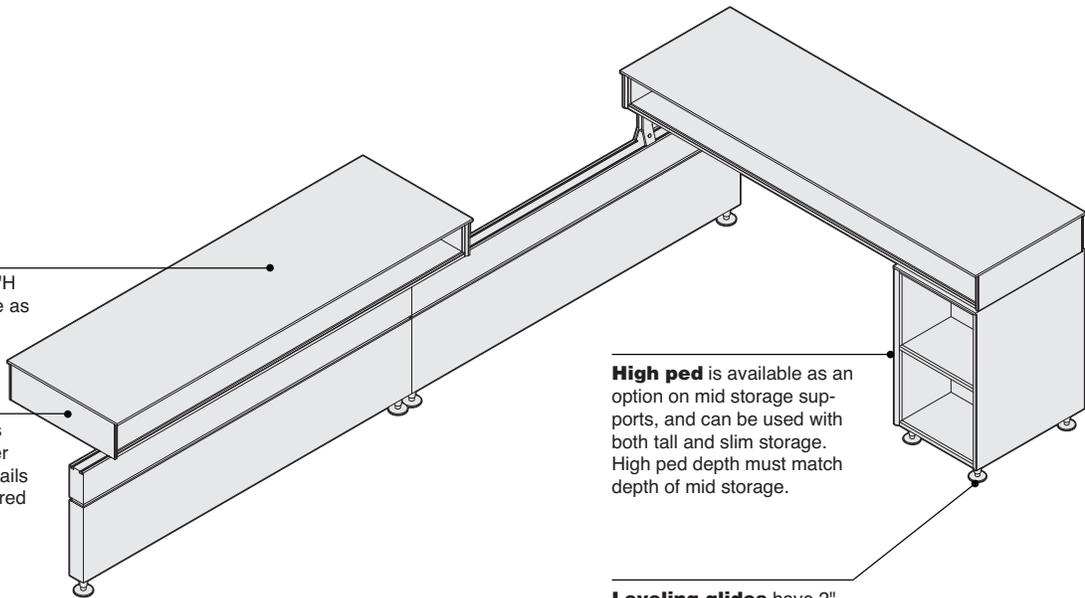

Tall storage provides a place for binders or other objects.

Integral pull is recessed and made of plastic. Pull is available in three finishes.

Top is standard with 1/2"H steel. Veneer is available as an option.

Slim storage provides storage of piles and other flat objects including Details trays. Personal and shared slim storage is available.

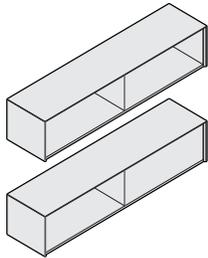

High ped is available as an option on mid storage supports, and can be used with both tall and slim storage. High ped depth must match depth of mid storage.

Leveling glides have 2" of adjustment for uneven floors.

Actual Dimensions

	Mid Storage	High Ped
Depth	17" or 24"	17" or 24"
Width	30", 36", 42", 48", 60", 66", 72", or 78"	18"
Height	77/8" or 153/8"	33"

Product Details

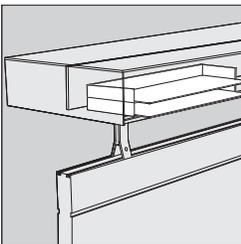

Two configurations of tall mid storage are available. Personal storage provides storage on one side only. Shared storage is divided down the center, with half storage on one side and half storage on the opposite side.

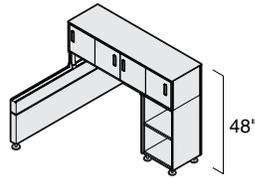

Personal storage has a center divider.

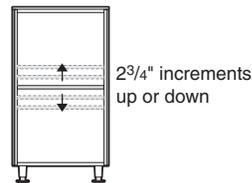

Shared slim storage divider is centered, providing access to half the depth on each side.

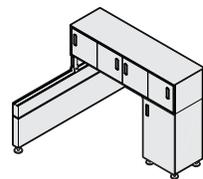

Slim storage interior height can accommodate two stacked Details landscape boxes.

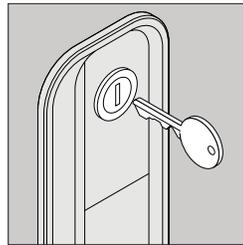

High ped is available 17"D or 24"D and must match depth of mid storage. 17"D high peds are open on one side. 24"D high peds have openings on both sides.

High ped shelf can be located in center of high ped with two additional locations, both up and down in 2 3/4" increments, for a total of five possible shelf locations.

A hinged door (left or right) is available as an option on 17"D high peds. Integral pull is recessed and made of plastic. All doors are locking. Pull is available in four finishes.

Locks are available factory or field installed. Factory-installed locks are standard and available keyed random only. Optional field-installed locks are available with consecutive, specific, and random keying options. Master-keyed locks are also available. Field-installed lock cylinders must be specified separately.

Tip: When the locking inline slider option is specified, all 60"W-78"W tall personal, shared, or wall-mounted mid storage are available with two locks.

► Lock and Keying, page 214

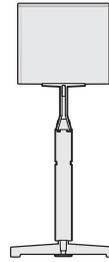

Height from floor to top of tall storage mounted parallel to beam or perpendicular to beam is approximately 48".

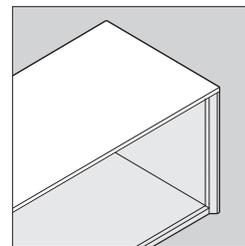

Height from floor to top of slim storage mounted parallel to beam or perpendicular to beam is approximately 40 1/2".

Column height at shortest level is 33". Column will adjust upward 2" for leveling.

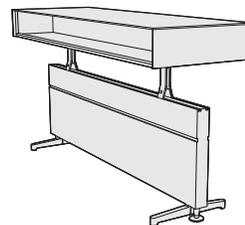

Mid storage is always centered on the beam.

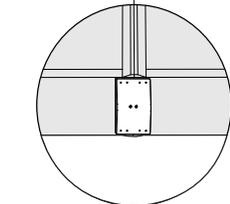

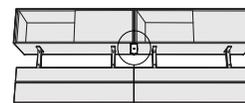

Veneer tops with square edge profiles are available.

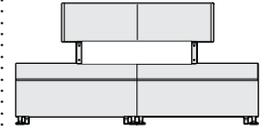

Connections

Mid storage attaches to the top of the beam in infinite locations.

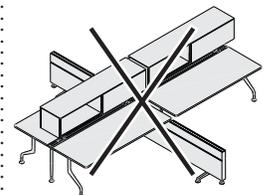

Mid storage ganging bracket is recommended to increase rigidity and maintain alignment of joining adjacent units when parallel to the beam. Ganging brackets are not intended for use in wall-mount applications.

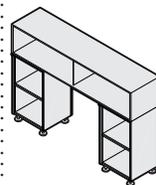

Storage can span over two beams. Stanchions are inset 8" from edge of storage unit.

Mid storage can mount on 1 1/2'-high low storage units with connect zones that are back to back. They can be mounted parallel or perpendicular to the low storage. Back-to-back spacer brackets, ordered separately, are required to maintain necessary spacing between storage units.

Mid storage cannot mount on back-to-back desks.

Two high peds can be used to support one mid storage unit – tall or slim.

Mid storage cannot be supported by one high ped and a column.

Multi-color paint option on storage

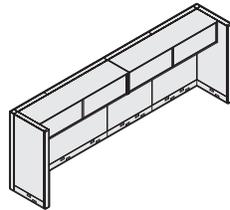

provides a unique design by allowing several color combinations to be chosen. Paint for case, drawer, slider, and interior can be specified separately if multi-color paint option is selected.

▶ See *Multi-Color Paint Applications*, page 206

Application Topics

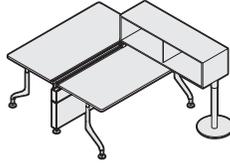

Mirrored mid storage share a pair of stanchions. Supports for mirrored application include one pair of stanchions and two columns or two high peds.

Wall-mount applications are available for personal storage. Wall-mount brackets mount on Privacy Wall, Answer, Montage, or V.I.A.

▶ See *Stability Guidelines*, page 20, for application rules.

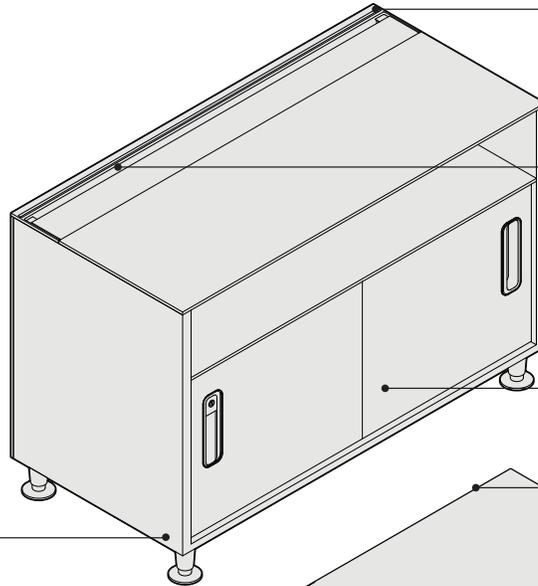

Application Rules for 30"W-48"W mid storage units mounted perpendicular to the beam with a desk mounted parallel:

- **30"W and 36"W mid storage** cannot be mounted perpendicular.
- **42"W mid storage** can be mounted perpendicular, using a column when a 24"D worksurface is used.
- **48"W mid storage** can be mounted perpendicular to a beam, using a column or high ped, with a 24"D worksurface. A column must be used when a 30"D worksurface is mounted parallel to the beam.

Low Storage

Low storage is available in multiple configurations and provides a place to manage and store files and/or items. It is available in 1- and 1½-high units. Open storage allows for easy visual management and access to information. Closed storage is achieved using drawers and inline sliders. Combinations of open and closed are available. Top can provide a temporary seat, ideal for informal meetings.
 ▶ Specifying, page 116

Rail on back of connect zone on 1½-high storage allows for the attachment of personal/modesty screens and c:scape worktools by Details.

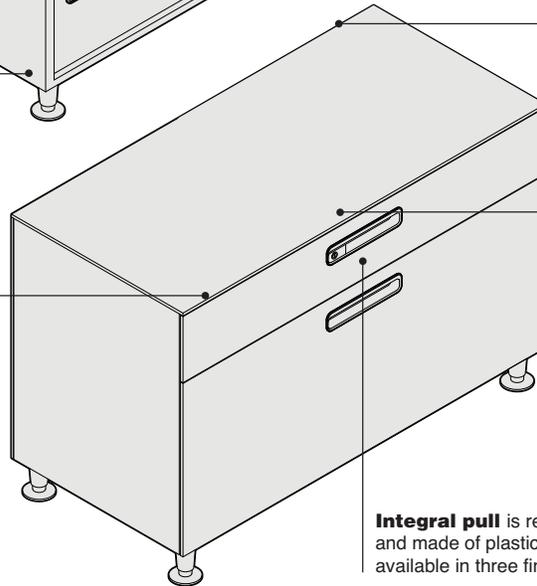

Connect zone, available as an option on 1½-high storage, is accessed by lifting the hinged door, giving the user easy access to both power and data (ordered separately) while also managing cords.

Inline sliders provide closure.

Unit is standard with a ½"H steel top. Veneer is available as an option.

Leveling glides have 2" of adjustment for uneven floors.

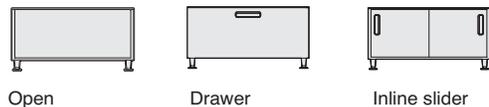

Drawers open their full depth for total access to the contents. Box drawers are standard 6"H. File drawers are standard 15"H. Drawers have proud fronts.

Lock is standard on drawers and inline sliders. A drawer/drawer configuration has a lock in the top 6" drawer to secure both drawers. A drawer/slider configuration has a lock for both the drawer and the slider. Lock is located in pull and is standard factory installed, keyed random.

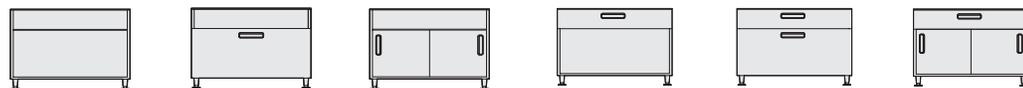

Integral pull is recessed and made of plastic. Pull is available in three finishes.

*60"W and 72"W low storage units are available in drawers configuration or drawer and open configuration only.
 ▶ See specifying page 120 for details.

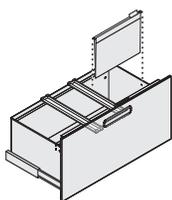

Actual Dimensions

Depth	17"
Width	30", 36", 42", 48", 60", or 72"
Height	18⅜" or 24"

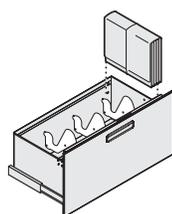

Product Details

15" H drawers include one hanging folder bar. It accommodates side-to-side filing of letter and A4 international hanging folders. 15" H drawers do not accommodate side-to-side filing of legal-size hanging folders.

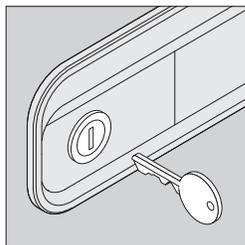

Rails accommodate front-to-back filing of letter, A4 international, and legal size hanging folders. Rail packages accommodate two rows of letter size filing in 30"W and 36"W drawers and three rows of letter size files in 42"W drawers. Rails are available as an option or can be ordered separately. ▶ Page 124

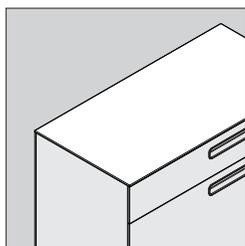

Dividers accommodate side-to-side filing of expandable folders and other objects. Divider packages include three dividers. Dividers are available as an option or can be ordered separately. ▶ Page 124

Drawer liners for use in 6"H drawers provide a soft landing pad for personal objects and are included with all 6"H drawers.

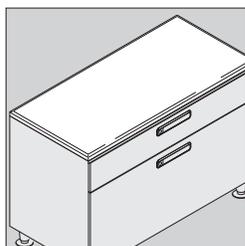

Safety interlock system allows only one drawer to be opened at a time.

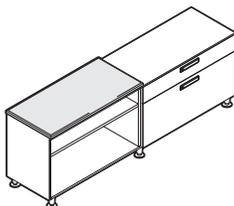

Locks are available factory or field installed. Factory-installed locks are standard and available keyed random only. Optional field-installed locks are available with consecutive, specific, and random keying options. Master-keyed locks are also available. Field-installed lock cylinders must be specified separately. ▶ Lock and Keying, page 214

Veneer tops with square edge profiles are available in place of the standard 1/2"H steel top.

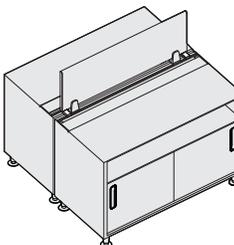

Cushion tops are available in place of the standard 1/2"H steel top. Specify the low storage with no top, and order the cushion as a separate style number. 12"D cushions are for use with 1 1/2-high low storage with a connect zone.

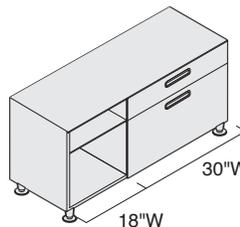

60" W and 72" W low storage can accommodate a steel or wood veneer top on one side, and a cushion top on the other side.

Glide pads for storage glides are available for use on non-carpet floors to minimize movement. Glide pads are also used on desk legs and tower glides as needed. Glide pads are ordered separately.

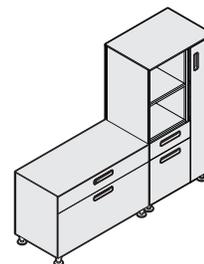

Back-to-back spacer is used to align 1 1/2-high storage when placed back to back. Spacer maintains the 1" space which allows screens and other accessories to be mounted. It is also used when desks are placed back to back. *Tip: 1 1/2-high storage must be specified with connect zone option.*

Counterweight packages must be specified as an option on low storage units that have a 15"H drawer and are not tethered to the beam. Counterweight packages are not required when 1 1/2-high low storage units with a connect zone are in a back-to-back application using the back-to-back spacer bracket. Counterweights can also be ordered separately.

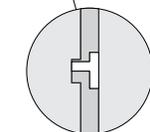

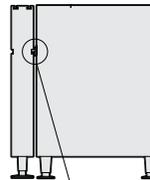

48" W low storage is subdivided. The 30"W portion is available in all low storage configurations. The 18"W portion is always open. 48"W low storage is offered in left- and right-handed units.

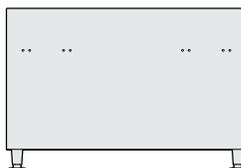

Drawers on low storage will align with drawers on tower.

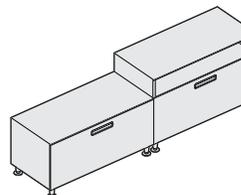

Connections

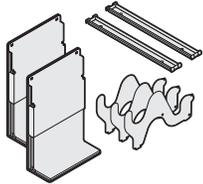

Storage-to-beam tether is standard with all low storage and is used whenever the low storage unit is parallel with the beam. Tether bracket connects to the beam in 1 1/2" increments. It is required when routing modular power from beam to storage connect zone. It also is used for visual alignment from storage to beam and from storage to storage. Storage-to-beam tether provides stability for units with drawers, eliminating the need for a counterweight package in most applications.

Storage back is standard with holes in back to accept storage-to-beam tether. A clean back option is available for applications where the back of storage will be visible. *Tip: If clean back is specified on unit with a connect zone, the connect zone cannot accept power or data.*

1-high low storage will line up with the bottom portion of a 1 1/2-high low storage unit.

Field installed accessories are available, including drawer accessories and counterweight packages.

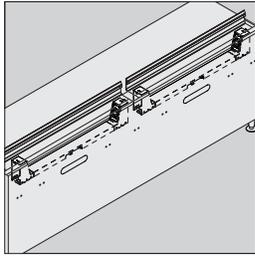

Ganging bracket is available for 1-high and 1½-high storage units in back-to-back applications or for side-to-side alignment. Ganging brackets provides visual alignment only. They do not provide structural stability.

Adjustable tether brackets attach desks to 1½-high low storage units with a connect zone in perpendicular applications. Range of adjustment is 28" to 32"H.

Wiring & Cabling

Low storage with connect zone can accommodate power and data. A modular powerkit or a power strip can be specified. Data is included with power. When using modular power, storage must be tethered to beam or another storage unit, to meet building code. When using a power strip, the outlet it is plugged into must be accessible to meet building code.

60"W and 72"W storage can accommodate one or two powerkits or power strips. Specify powerkits for use with 60"W or 72"W storage units, as the covers in the powerkits for use with 30"W or 36"W units will not fit properly in the larger size storage units.

A cutout is standard in the back of a 1½-high storage when connect zone is optioned. Opening allows for the routing of power and data. 60"W and 72"W 1½-high storage have two cutouts.

Application Topics

Desk height of 28½" or higher allows layering of both 1-high and 1½-high low storage under the desk. Desk heights less than 28½" allows layering of 1-high low storage units.

Interior Dimensions for Storage

▶ Page 210

Mid storage can mount on two 1½-high low storage units with connect zones that are back to back. They can be mounted parallel or perpendicular to the low storage. Back-to-back spacer brackets are required to maintain necessary spacing, and are ordered separately.

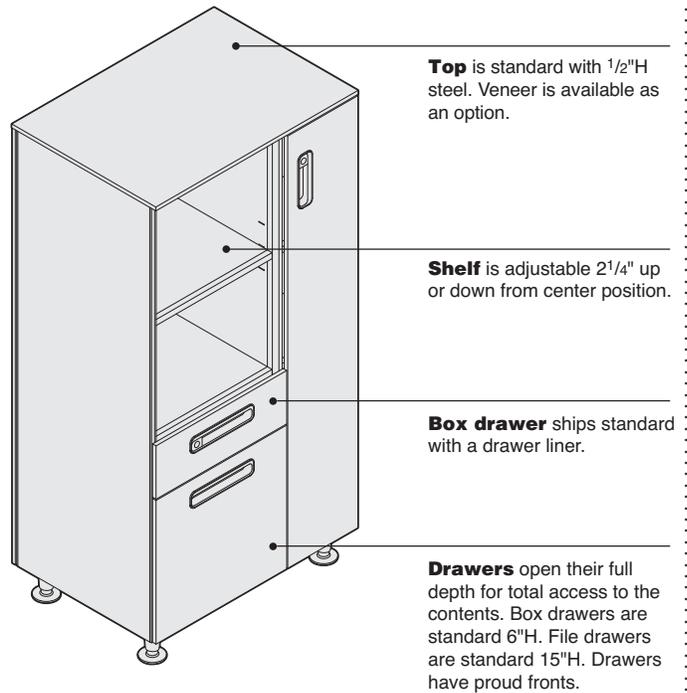

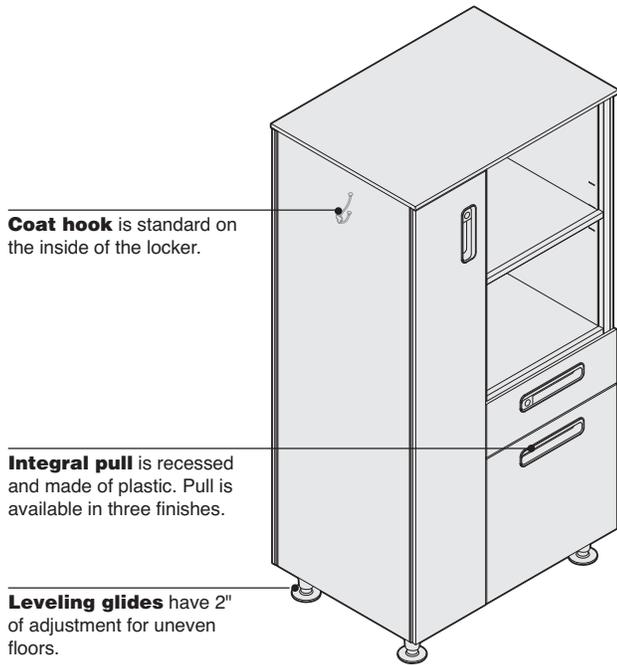

Shipping

Counterweight packages ship separately from case and must be field installed.

Tower

Tower provides a place to store coats or bags along with binders, files, and other items. Towers are available left- or right-handed. Tower is 17"D to align with the depth of low storage and is 48"H and 24"W.

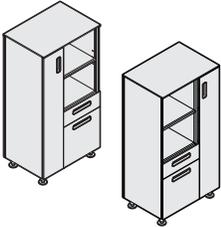

► Specifying, page 126

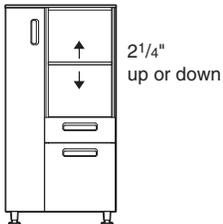

Actual Dimensions

Depth	17"
Width	24"
Height	48"

Product Details

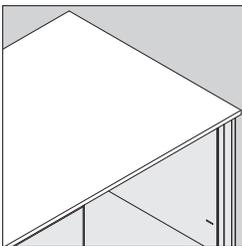

Two configurations of tower are available - door hinged left and door hinged right.

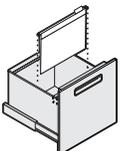

Shelf is adjustable. Adjustment is 2 1/4" up or down from center.

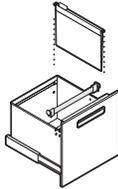

Drawer liners for use in 6"H drawers provide a soft landing pad for personal objects and are included with all 6"H drawers.

Veneer tops with square edge profiles are available.

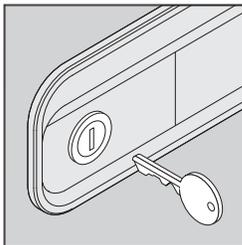

15"H drawers accommodate front-to-back filing of letter-size hanging folders.

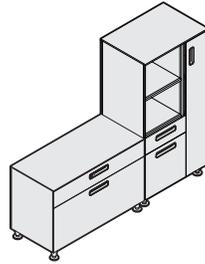

Rails accommodate side-to-side filing of letter-size hanging folders. Rail is standard with all file drawers or can be ordered separately. ▶ Page 127

Safety interlock system allows only one drawer to be opened at a time.

Locks are available factory or field installed. Factory-installed locks are standard and available keyed random only. Optional field-installed locks are available with consecutive, specific, and random keying options. Master-keyed locks are also available. Field-installed lock cylinders must be specified separately. ▶ Lock and Keying, page 214

Glide pads for tower glides are available for use on non-carpet floors to minimize movement. Glide pads are also used on low storage and desk glides as needed. Glide pads are ordered separately. ▶ Page 100

Drawers on towers will align with drawers on low storage.

Connections

Ganging bracket is available for towers in back-to-back applications or for side-to-side alignment of another tower or low storage. Ganging brackets provide visual alignment only. They do not provide structural stability.

Multi-color paint option on tower

provides a unique design by allowing several color combinations to be chosen. Paint for case, drawer, door, and interior can be specified separately if multi-color paint option is selected.

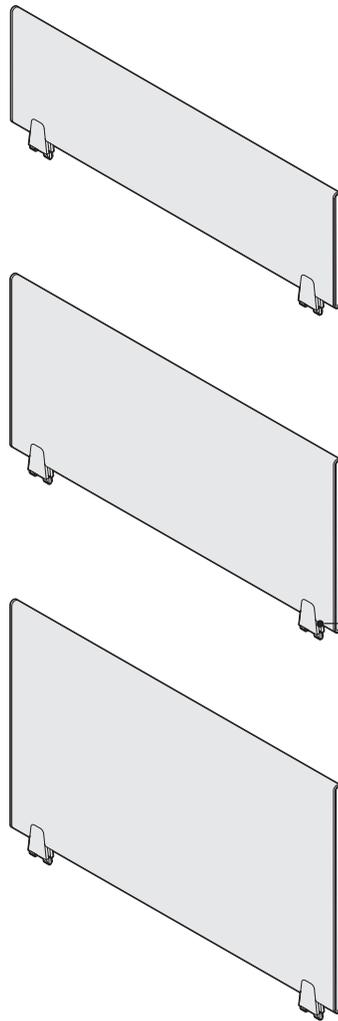

▶ See *Multi-Color Paint Applications*, page 206

Fixed Personal/Modesty Screens

Personal/modesty screens are tackable and provide variable privacy when and where it is needed. The screens can be used on the beam, on 1½-high low storage with a connect zone, on the back of the desk for visual privacy, or below the desk for modesty. 24"H is not intended for use in modesty position.

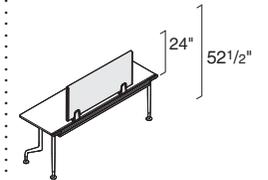

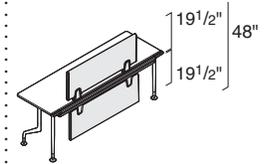

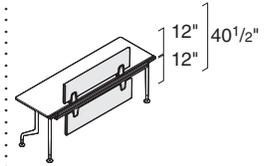

► Specifying, page 128

Fixed personal/modesty screens are available in three heights, 12", 19½", and 24", and four widths to accommodate varying levels of privacy. Height is measured from the top of the mounting surface to the top of the screen.

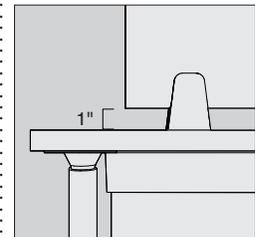

Brackets are attached to the screens.

Product Details

Personal/modesty screens can be mounted on the desk rail. In privacy applications on a 28½"H desk, the 12"H screen has an overall height of 40½" from the floor, a 19½"H screen has an overall height of 48" from the floor, and a 24"H screen has an overall height of 52½" from the floor.

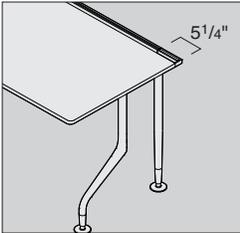

Gap is 1" between personal/modesty screen and mounting surface.

Actual Dimensions

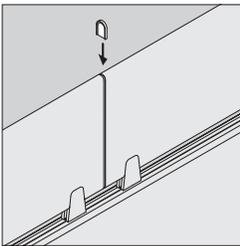

Width	30", 36", 42", or 48"
Height	11", 18½", or 23"
Overall height	12", 19½", or 24"
Thickness	¾"

Tip: Overall height is measured from top of mounting surface to the top of the screen.

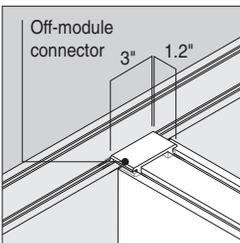

Connections

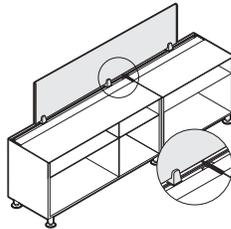

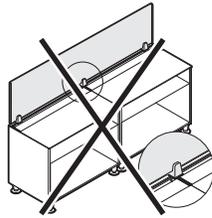

Each end of the top desk rail has a 5 1/4" dead zone which prohibits the attachment of personal screens.

When screens are placed directly adjacent to each other, a small aligner can be placed in between the screens at the top to connect them for planar alignment. Aligners are ordered separately in packages of 10.

When using 90° beams, a 3" dead zone is created in the top channel of the spine beam, and a 1.2" dead zone is created on the 90° beams. Consider these dead zones when planning with screens.

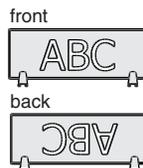

Screens 60"W and wider have a center bracket. When spanning across multiple storage units, the placement of this bracket, where it needs to connect, must be considered.

Surface Materials

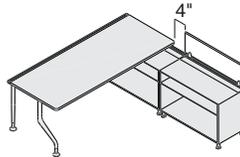

Infill
• Fabric

Brackets
• 4799 Platinum paint

Fabric without pattern is recommended when using a COM fabric to provide a consistent visual. Fabric with patterns could result in the above visual.

Application Topics

Screen width needs to allow 4" clearance from front edge of desk to allow desk surface to slide forward.

Centered Screens

Centered screens

provide a boundary element along the beam. They can also be placed between two back-to-back desks or back-to-back 1½-high low storage units with connect zones. Centered screens can not be used below the desk for modesty.

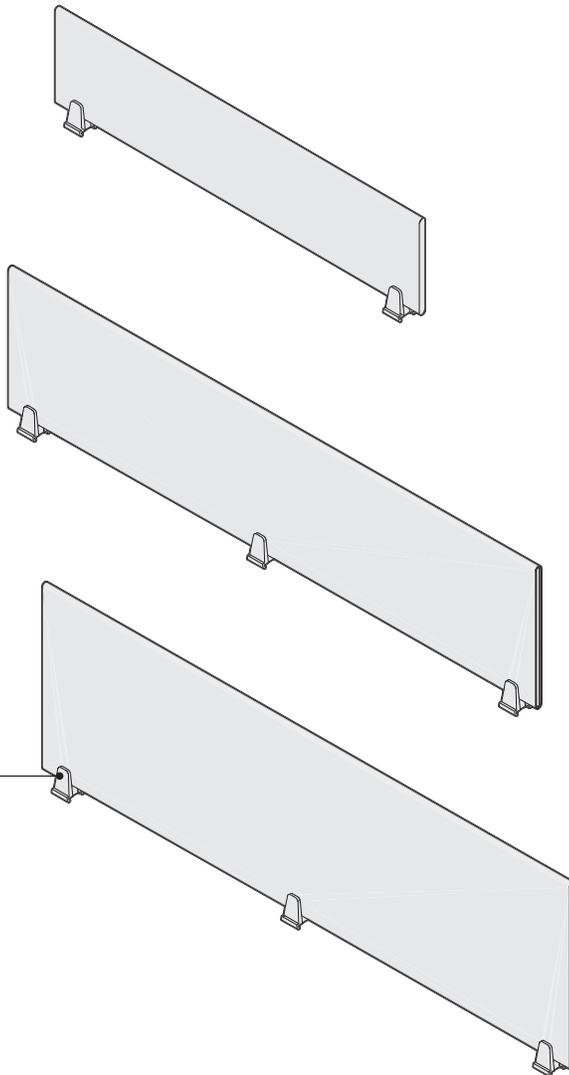

► Specifying, page 129

Centered screens with fabric infill

are tackable.

Centered screens are available in three heights, 12", 19½", and 24", and five widths to accommodate varying levels of privacy. Height is measured from the top of the mounting surface to the top of the screen.

Brackets are attached to the screens.

Actual Dimensions

Width 36", 42", 48", 60", or 72"

Height 11", 18½", or 23"

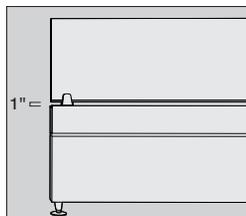

Overall height 12", 19½", or 24"

Thickness ⅜" or ¾"

Tip: Overall height is measured from top of mounting surface to the top of the screen.

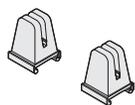

Tip: Custom insert kit can accommodate inserts that are ¼", ⅜", or ½" thick.

Product Details

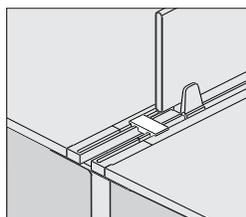

Gap is 1" between centered screen and mounting surface.

Connections

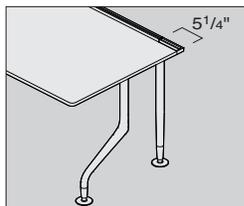

Center screen custom insert kit allows for use of other infill materials such as wood or fusion, maximum height of infill is 18 1/2". Screens 36"-48"W require the two bracket kit. Screens 60"-72"W require the three bracket kit.

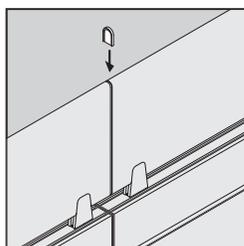

▶ See page 130

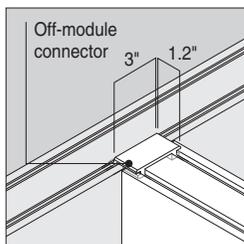

In back-to-back applications a back-to-back spacer must be used to create the 1" space between either two desks or two 1 1/2-high low storage units with a connect zone.

Each end of the top desk rail has a 5 1/4" dead zone which prohibits the attachment of centered screens. A screen must be at least 12" narrower than the desk it is mounting to.

When fabric screens are placed directly adjacent to each other, a small aligner can be placed in between the screens at the top to connect them for planar alignment. Aligners are ordered separately in packages of 10.

When using 90° beams, a 3" dead zone is created in the top channel of the spine beam, and a 1.2" dead zone is created on the 90° beams. Consider these dead zones when planning with screens.

front

back

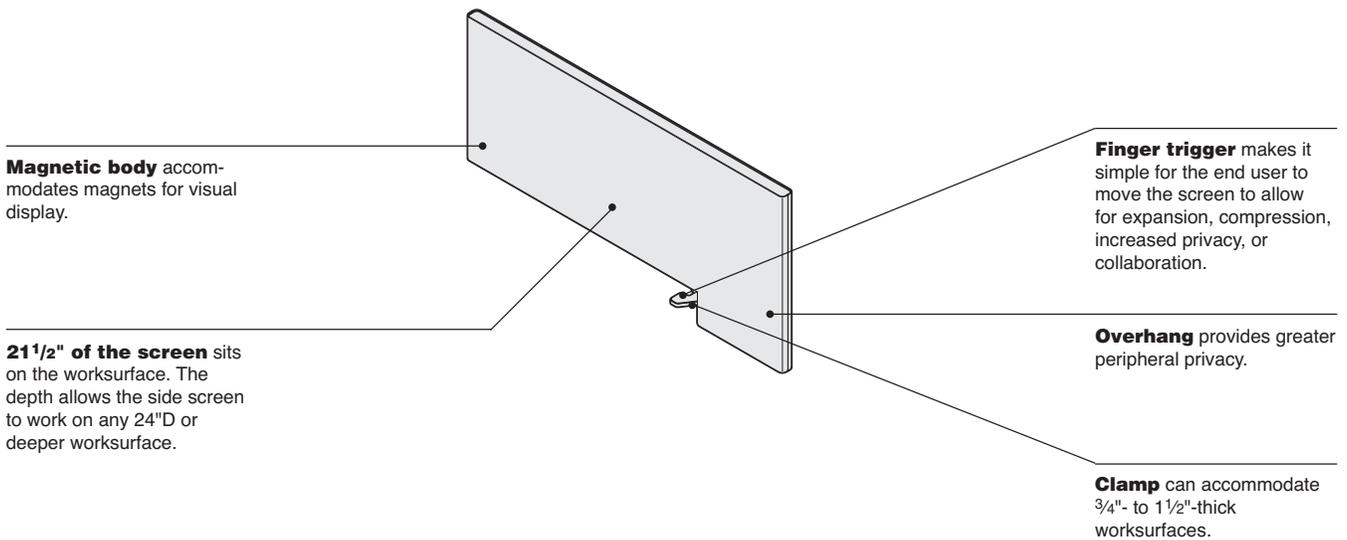

Fabric without a pattern is recommended when using a COM fabric to provide a consistent visual. Fabric with patterns could result in the above visual.

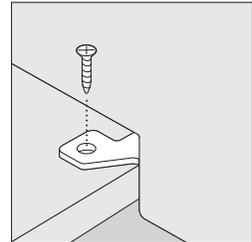

Divisio Side Screen

Divisio side screen is magnetic and provides a territorial boundary between users. The user-movable functionality allows users to decide when and where they need additional privacy. The screens may be used on any 3/4"- to 1 1/2"-thick worksurface.

► Specifying, page 131

Product Details

Divisio side screen can be made more permanent by adding two screws through the clamp. For 3/4" thick worksurfaces, c:scape, and FrameOne, a #10 x 3/4" countersunk screw is recommended. For worksurfaces over 3/4" thick, a #10 x 7/8" countersunk wood screw is recommended.

Actual Dimensions

Depth	29 1/2" (total), 21 1/2" (sits on worksurface)
Width	1 1/4"
Height	14 1/4" (total), 11 5/8" (above worksurface)

Worktools

Pile boxes are stackable containers for both paper-based media and object management.

Shelves are designed to reclaim surface space, support the behavior of piling, and provide a place for personal objects or technology. Shelves can be mounted to the rail on a c:scape desk or 1½-high low storage with a connect zone. It is not recommended for attachment to the beam.

Tool box and utility box are designed for small object management. Utility boxes can be stacked on one another.

- Designed to fit:
- Inside display shelf
 - On top of shelves
 - Inside personal boxes
 - Inside 6" personal drawers

Diagonal box is designed to hold and transport binders and paper media. It can be positioned in a horizontal or vertical orientation.

- Designed to fit:
- Inside mid storage
 - On top of shelves
 - Inside 15" low storage drawer

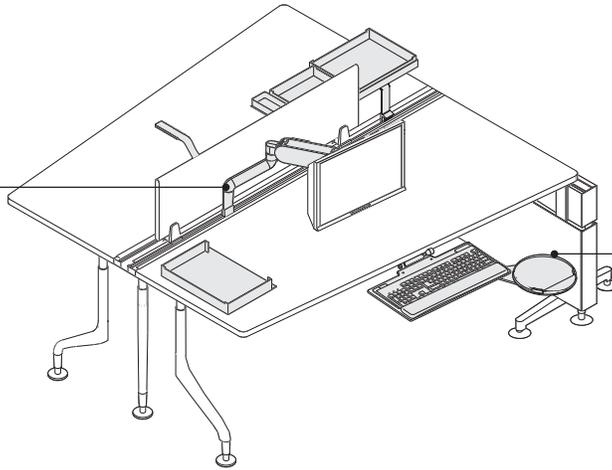

Personal boxes are stackable and designed for object management.

- Designed to fit:
- Inside 6" drawers
 - Inside mid storage
 - Under and on top of shelves

Vertical processor sling with c:scape mounting bracket can be mounted to the understructure of a desk to store a CPU and allow easy access to drives and cables.

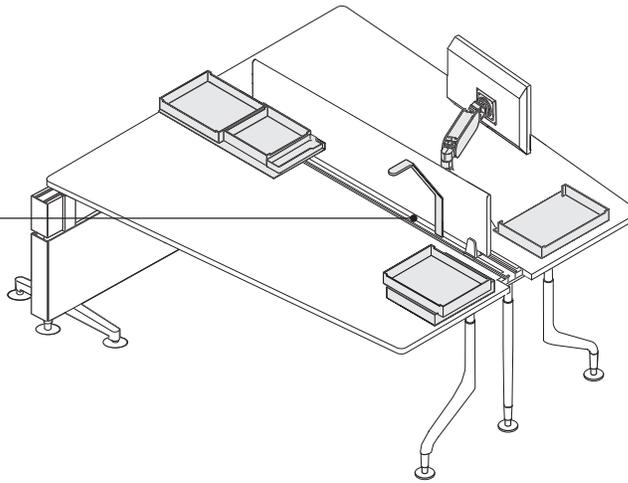

LED light can be free-standing or rail-mounted.

The FYI arm with c:scape mounting bracket can be connected to the back rail of a desk that is either tethered to the beam, the back of another desk, or 1/2-high low storage with a connect zone.

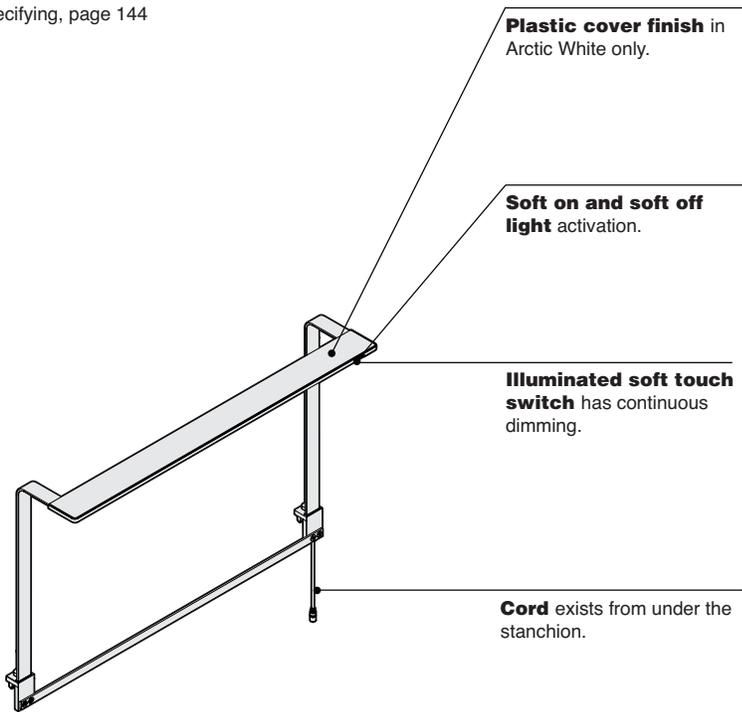

Lift and lock keyboard assembly with c:scape mounting bracket can be connected to the understructure of a desk.

Worktools that are mounted to a rail can occupy the same area as a personal or centered screen. The attachment brackets of both worktools and screens cannot occupy the same space on the rail.

LED Personal Task Lights

► Specifying, page 144

Plastic cover finish in Arctic White only.

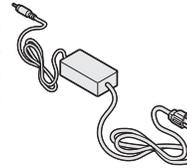

Soft on and soft off light activation.

Illuminated soft touch switch has continuous dimming.

Cord exists from under the stanchion.

Product Details

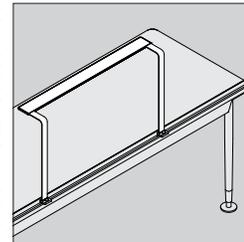

Personal task light includes the lamp and power supply with cord set. Rail-mounted version includes rail brackets. Non rail-mounted version includes Universal Mounting brackets.

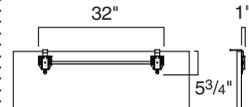

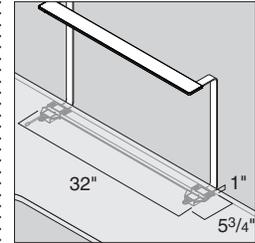

Power supply uses a modular cord with standard two prong plug, an integrated low voltage cord, and a connector to attach to light.

Tip: Energy saving mini-LEDs greatly reduce power use.

Connections

LED personal task light mounts directly to the rail systems of c:scape, Frame-One, Elective Elements, Impact, Turnstone Campfire Big Table, and Details SOTO rail.

Non rail-mounted LED personal task lights will not work on worksurfaces with knife edge that is longer than 1 1/4", or with modesty panels or modesty screens closer than 6" from the back edge.

Wiring & Cabling

Personal task light includes the lamp and power supply with cord set.

Power supply uses a modular cord with standard two prong plug, an integrated low voltage cord, and a connector to attach to light.

Victor2

Victor2 is a recycling solution that is appropriate for supporting larger work groups, conference rooms, and cafés. A mobile unit and two freestanding units are available. ▶ Specifying, pages 145–148

Mobile unit has three openings. Eight insert options are available to pick for the openings. These eight insert options contain English, Spanish, and French.

Receptacles contain features to accommodate oversized bags.

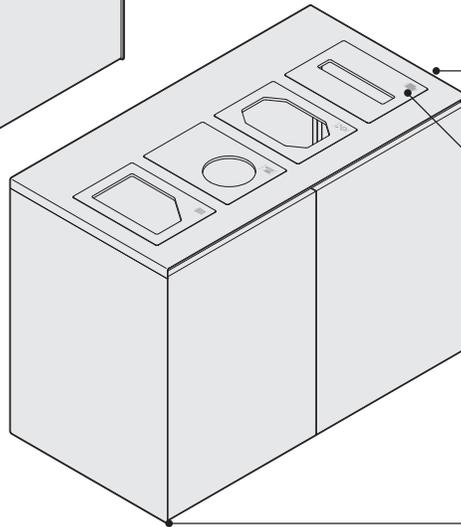

Four non-locking casters are standard. Two casters swivel, and two casters are fixed.

Soft-touch integral handle allows easy movement from one location to another.

Receptacles fit bags from 30 gallon size and larger.

Freestanding unit has four or five openings. Eight insert options are available to pick for the openings. These eight insert options contain English, Spanish, and French.

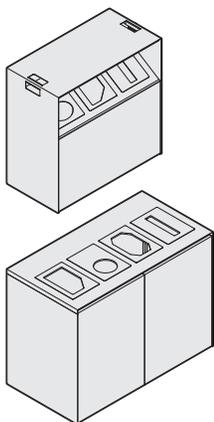

Leveling glides are fully adjustable up to 1 1/2".

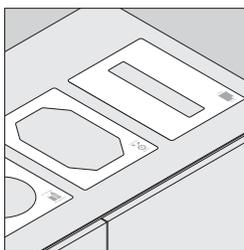

Actual Dimensions

	Mobile Unit	Freestanding Unit
Depth	18"	25"
Width	36"	48" or 60"
Height	36"	36"

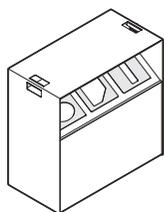

Product Details

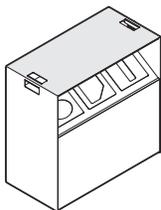

Mobile and freestanding units are standard with a metal case and top. Front and back of unit are available in wood or laminate.

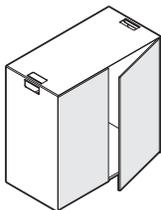

Acrylic inserts etched with recycling icons are standard on mobile and freestanding units. The verbiage for each icon is in English/Spanish/French on the same insert.

Mobile unit is standard with three openings for inserts and sloped receptacles with built-in bag holding system.

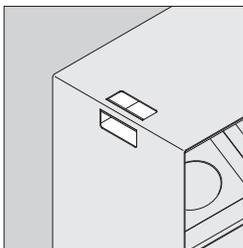

Top on the mobile unit can be used for food service use or tray storage.

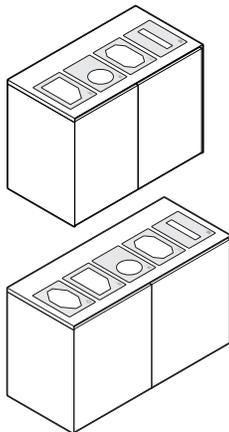

Hinged doors on the back are standard on the mobile unit for easy access to receptacles.

Four non-locking concealed casters, two swivel and two fixed, are standard on the mobile unit.

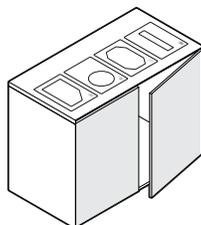

Receptacles in mobile unit can accommodate 12 gallons each. Receptacles in freestanding unit can accommodate 30 gallon size and larger.

Soft-touch integral handle on mobile unit allows for easy movement from one location to another.

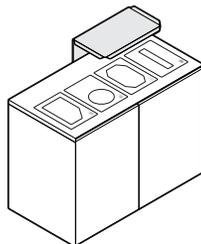

Freestanding unit is standard with either four or five openings for inserts on the top of the unit.

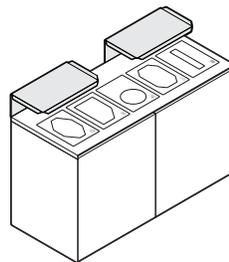

Hinged doors on the front are standard on the freestanding unit for easy access to the receptacles.

Leveling glides on freestanding units are fully adjustable to 1 $\frac{1}{2}$ ".

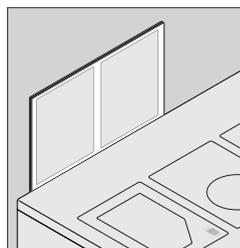

Tray shelf can only be used with the freestanding unit.

Tray shelf fits most trays up to 20 $\frac{3}{4}$ " x 12".

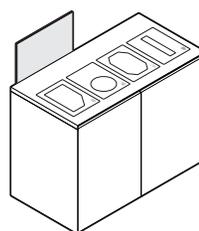

Freestanding four- or five-slot opening will accommodate two tray shelves.
Tip: A gap of 15" will separate the two tray shelves on a five-opening unit.

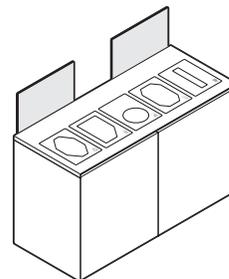

Maximum capacity of tray is 20 food trays with maximum size of tray 20" x 20".

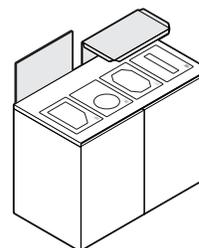

Display holds two 8 $\frac{1}{2}$ " x 11" papers or one 11" x 17" paper.
Tip: Paper will be between two acrylic plates. Paper can easily be replaced without tools.

Display can only be used with the freestanding unit.

Freestanding four- or five-slot opening will accommodate two displays.
Tip: A gap of 18 $\frac{1}{2}$ " will separate the two displays on a five-opening unit.

One tray shelf and one display can be used on the freestanding unit.

Wiring Schematics

Details for the Electrician

c:scape offers three different wiring schematics to allow you to match your specific wiring strategy to any typical building wiring plan.

Tip: All the components in an electrical system must use the same wiring schematic. The components are keyed and color coded to make it impossible to connect mismatched parts.

Black = Four-circuit, 3+1

Brown = Four-circuit, 2+2

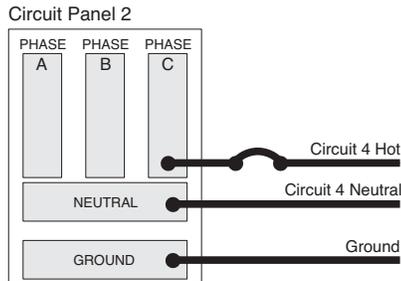

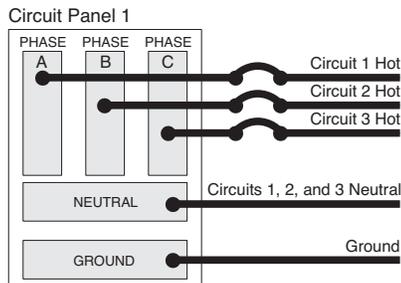

Rust = Three-circuit, separate neutrals (3SN)

Shared neutrals = 10 gauge

Non-shared neutrals = 12 gauge

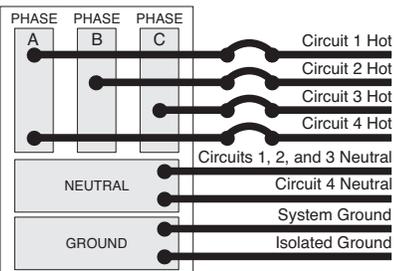

Hot wires = 12 gauge

Four-Circuit, 3+1

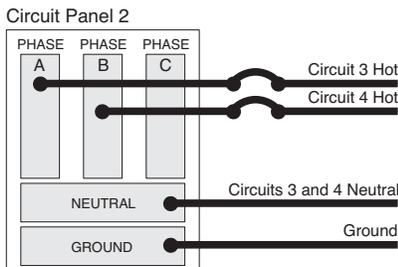

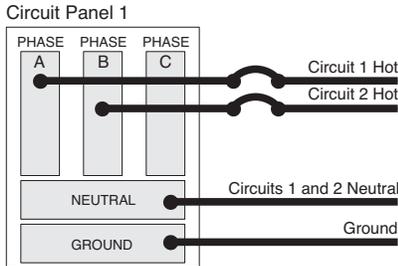

In the four-circuit 3+1 schematic, circuits 1, 2, and 3 are distributed from the first circuit panel and are supported with one shared neutral and one shared ground. Circuit 4 is distributed from a second circuit panel and is supported with a separate neutral and ground.

Single 3-Phase Circuit Panel

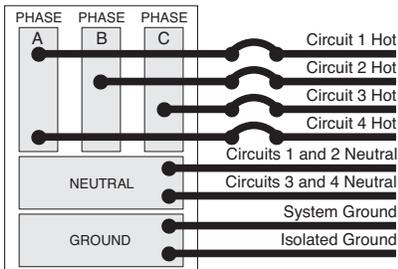

On a single 3-phase circuit panel, all four circuits are distributed as shown.

Four-Circuit, 2+2

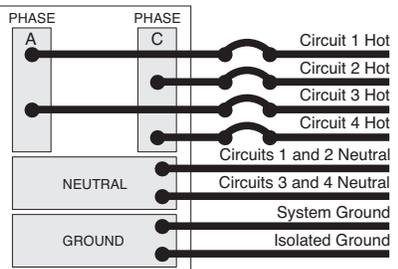

In the four-circuit 2+2 schematic, circuits 1 and 2 are distributed from two different phases from the first circuit panel and are supported with one shared neutral and one shared ground. Circuits 3 and 4 are distributed from a second circuit panel and supported by their own shared neutral and ground.

Single 3-Phase Circuit Panel

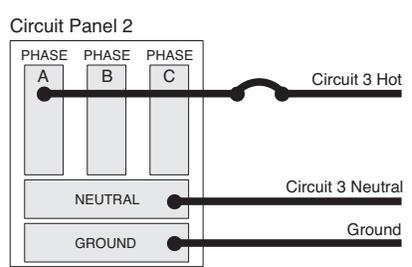

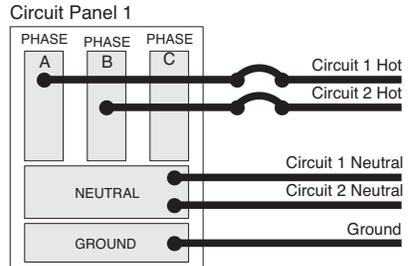

On a single 3-phase circuit panel, all four circuits are distributed as shown.

Split-Phase Circuit Panel

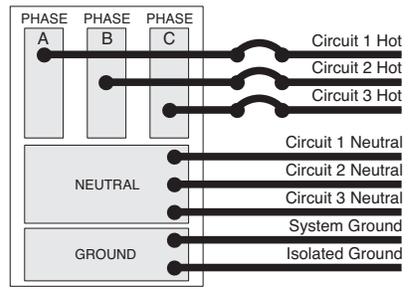

On a split-phase circuit panel, all four circuits are distributed as shown.

Three-Circuit, Separate Neutrals

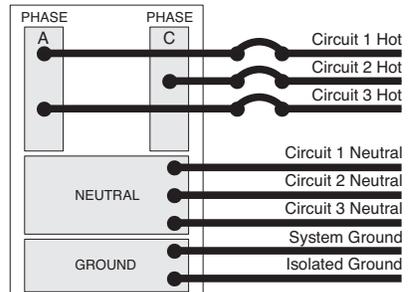

In the three-circuit, separate neutral schematic, circuits 1 and 2 are distributed from two different phases from the first circuit panel. Each circuit is supported with its own neutral and a common ground. Circuit 3 is distributed from the second circuit panel and is supported by its own neutral and ground.

Single 3-Phase Circuit Panel

On a single 3-phase circuit panel, three circuits are distributed as shown.

Split-Phase Circuit Panel

On a split-phase circuit panel, three circuits are distributed as shown.

How to Calculate Power Needs

Use This to Determine How Many Power-Ins You Will Need

When planning a power network, you must calculate the amperage requirements of all your electrical components so you can provide sufficient electricity to power them.

If your usage is not known in advance:

The National Electrical Code (NEC) allows a maximum of 13 receptacles on each 20-amp circuit. This provides up to 30 receptacles for each 3-circuit power-in and 40 receptacles for each 4-circuit power-in.

Most electrical engineers write their specifications more conservatively than the NEC. Consult the project electrical engineer.

These numbers refer to receptacles, not outlets. All receptacles are duplex and include two outlets.

If your usage is known in advance:

Add up the amperage used by each piece of equipment in the workstation. Whenever you reach 60-amperage (20-amperage times 3 circuits) or 80-amperage (20-amperage times 4 circuits) from items that are likely to be used at the same time, you have reached the limit for a single power-in. Specify another power-in and continue until all equipment is powered.

If the circuits will normally be subject to a continuous load (three or more hours of continuous use, such as lights or computers), the NEC requires that circuit capacity be "de-rated" by 20 percent. Therefore, treat circuits used for continuous loads as if they were rated at 16-amperage instead of the regular 20-amperage.

Try to anticipate future increases in power requirements and build some excess capacity into your plan.

▶ See table at right for typical and actual amperage usages for components.

To calculate amperage when the wattage of a device is known, divide watts by 120.

Some appliances, such as large copiers, coffee makers, or space heaters require most of the current available on a 20-amp circuit. It is recommended that such devices be supplied with their own receptacle/circuit, directly from the building. This leaves the capacity of the furniture circuits available for the more dynamic requirements of the office equipment.

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper planning of electrical circuits in your locale.

Requirements of Office Equipment in Amps

General Equipment (Typical Amperage)

A.C. adapter	0.05
Adding machine	0.05
Answering machine	0.08
Calculator	0.025
Clock	0.03
Coffee pot	10.00
Copy machine	15.00
Desk-top copiers	7.00 to 10.00
Electric eraser	0.25
Fan	0.50
Manuscript holder	0.75
Microwave	8.00 to 12.00
Pencil sharpener	0.25
Radio	0.05
Space heater, 1000 watts	8.50
Space heater, 1500 watts	12.50
Stand-alone copiers	15.00

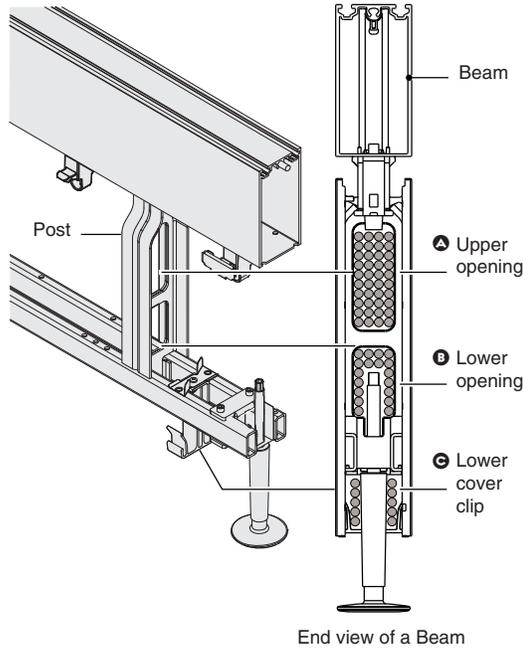

Electronic Equipment (Typical Amperage)

Desk-top memory storage devices	0.08 to 0.15
Desk-top printers	1.20 to 2.00
DVD players	0.13 to 0.20
Flat-panel screens	3.50
Laptops	3.50 to 5.00
Modems	0.15
Stand-alone printers	1.50 to 2.50
VDTs and PCs	0.08 to 4.80

Steelcase Lighting (Actual Amperage)

<i>Shelf lights</i>	
24" wide, 17 watts	0.20
36" wide, 25 watts	0.30
48" wide, 32 watts	0.30

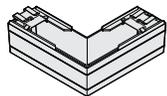

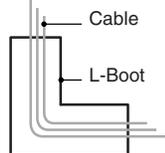

Cable Capacities

	Outside Diameter of Cable = .223		Outside Diameter of Cable = .310	
	Maximum Capacity	40% Fill Rate	Maximum Capacity	40% Fill Rate
A Upper opening of beam vertical post	130	71	58	37
B Lower opening of beam vertical post (intended for power routing although cables can be routed at this location)	90	49	42	25

Tip: When 90° beam is positioned on a vertical post, transition of power and data can not be done. See vertical post positioning table.

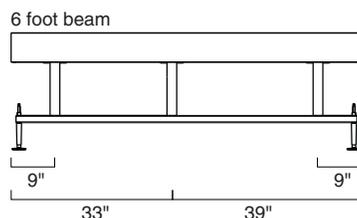

Vertical Post Positioning Table

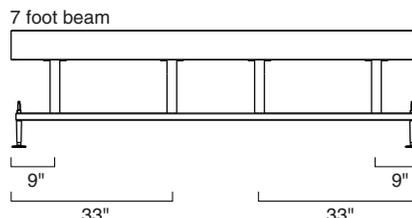

4 foot beam — Outer posts positioned 9" from each beam end.

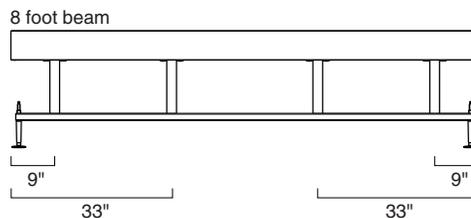

5 foot beam — Outer posts positioned 9" from each beam end. Center posts positioned either 27" or 33" from beam end.

6 foot beam — Outer posts positioned 9" from each beam end. Center posts positioned either 33" or 39" from beam end.

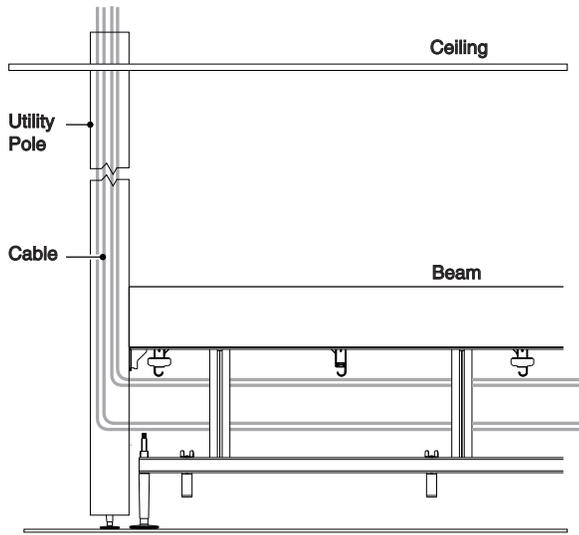

7 foot beam — Outer posts positioned 9" from each beam end. Center posts positioned 33" from each beam end.

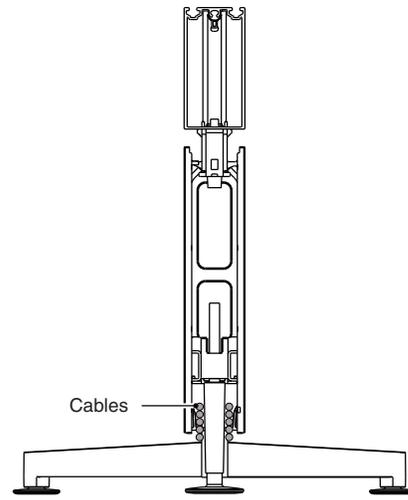

8 foot beam — Outer posts positioned 9" from beam end. Center posts positioned 33" from each beam end.

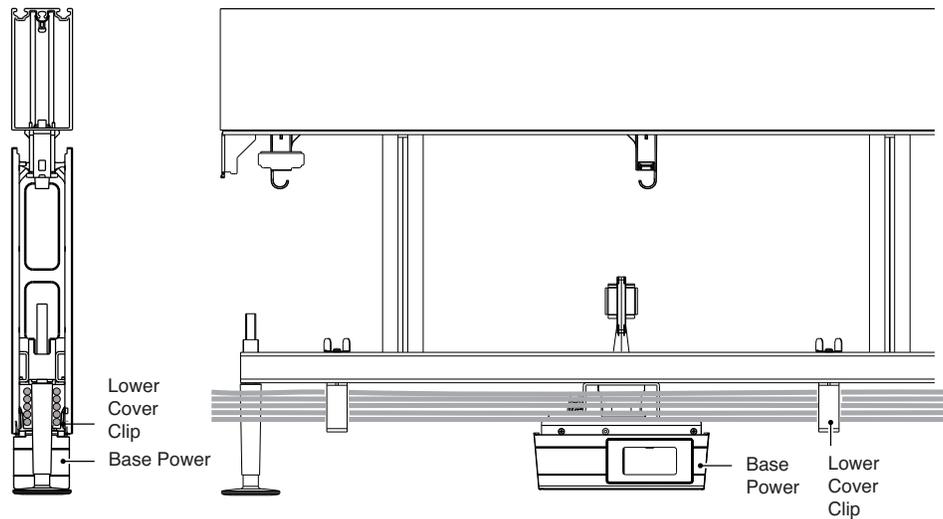

Cable Capacities, continued

③ Utility pole and beam

① Base entry of cables across a foot (per side)

② Passing across base powerkit

Tip: Power harnesses reduce 5E cable capacity by approximately 10 cables. When using 6A cables, capacity is reduced by approximately 6 cables. The numbers may vary according to installation practices and the type of cables used.

Tip: It is recommended that power is installed prior to cables. When large numbers of cables are to be installed in any application, power must be installed first.

Tip: Test and verify cable capacities for your individual situation. We recommend that testing be conducted using your specific cable as well as the furniture configuration you are considering. Cable capacities in this table are based on non-plenum-rated cables. Figures are approximations. Actual capacities may vary slightly depending on which manufacturer produced the cable and the specific field conditions.

Desking Power and Data

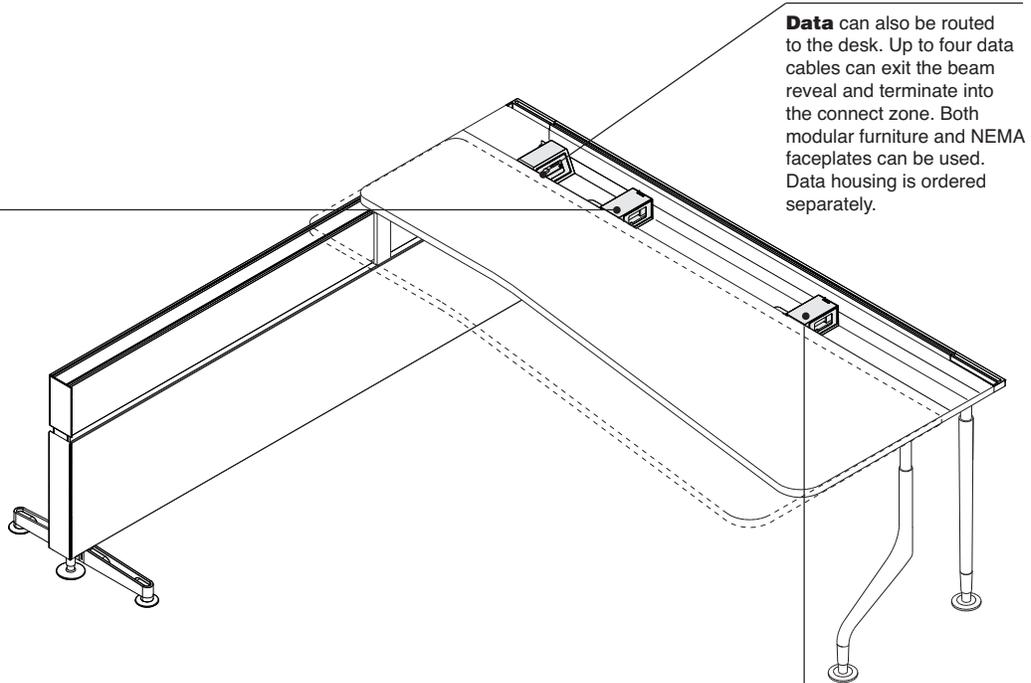

Desk Tethered to Beam

Desks include a sliding surface or a cut-out option which opens to a connect zone in the understructure. Power and data are routed to the connect zone for easy user access and cord management.

► Specifying, page 176

Modular powerkits

are available for use in the connect zone when desks are tethered to the beam. The power is routed out of the beam reveal and through the end of the desk located closest to the beam. The power block accommodates two receptacles which are ordered separately.

Data can also be routed to the desk. Up to four data cables can exit the beam reveal and terminate into the connect zone. Both modular furniture and NEMA faceplates can be used. Data housing is ordered separately.

Additional power block

can be added in the connect zone by ordering an additional harness and power block. Receptacles are ordered separately.

► See *Add-On Modular Power Blocks and Harnesses*, page 171, for harness lengths which are dependent on desk width.

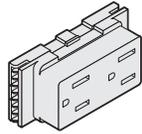

Product Details

Power strips are available for use in the connect zone on a sliding top or a non-sliding cut-out top of both tethered desks and freestanding desks. Receptacles are prewired within the power strip. A duplex/duplex version or a flexible/flexible version is available. If wall outlet is not available, base power is required for plugging the power strip into an outlet, and must be accessible to meet building code.

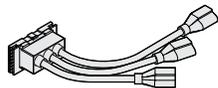

Modular power can be routed to desks that are tethered to 1½-high low storage and desks that are connected back to back. Consulting with a building inspector is recommended to ensure these applications are acceptable. Modular power cannot be used in non-sliding desks with a scallop.

Hardwire powerkits are available for cities where code requires. Kits include junction box and a non-PVC hardwire harness with 8 wires. A cover is included for beam interface.

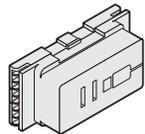

Daisy chaining of power can occur when desks are tethered to the beam in a parallel application. A modular desk powerkit is used for the first desk that is being powered and then additional add-on power blocks and harnesses are ordered for each adjacent desk. See *Add-On Modular Power Blocks and Harnesses*, page 69, for harness lengths which are dependent on desk width. Four data cables can enter the first desk. These cables can be routed to four desks (one cable each) or two desks with two cables each. Data housing is ordered separately.

Duplex receptacles are available in 15- and 20-amps, isolated or system ground, with multiple line options. The same duplex receptacle can be used in the desk, 1½-high low storage with connect zone, and the base area. Receptacles are ordered separately.

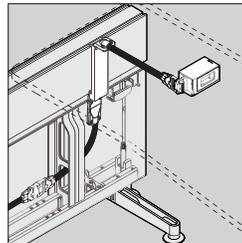

Modular flexible receptacles are available in 15-amp, isolated or system ground, with multiple line options. Flexible receptacles offer easy access to three outlets. The same flexible receptacle can be used in the desk and 1½-high low storage with connect zones. Not intended for use in the base area. Receptacles are ordered separately. Check for availability.

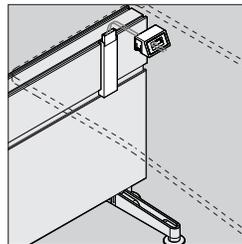

USB receptacles are available in three wiring schematics with multiple line options. USB receptacles offer easy access to two charging ports. Each port provides 1 ampere of output. USB receptacles conveniently charge a wide range of electronic devices. Some devices may not be compatible. The same USB receptacle can be used in the desk and 1½-high low storage with connect zones and the base area. Receptacles are ordered separately.

Wiring and Cabling

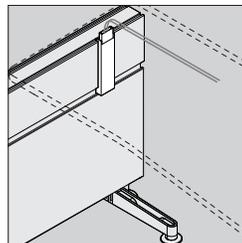

Three wiring schematics are available—3+1, 2+2, and three circuits with separate neutrals (3SN). All the components in an electrical distribution system must use the same wiring schematic. For safety, the components are keyed, labeled, and color-coded to make it impossible to connect mismatched parts.

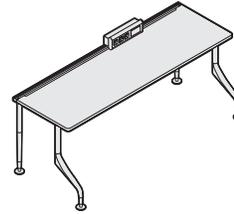

Desk power accommodates two to four receptacles.

Data in the desk accommodates both modular furniture and NEMA size faceplates. Desk data housing is ordered separately.

Cable cover can be used to transition data cables from beam to desk.

Modular power and data cannot be used in a non-sliding desk with a scallop. Power strips with rail mount attachment brackets can be mounted on the desk rail for easy access to power and data above the worksurface.

Filler packages are available to fill unused power or data openings. They are offered in packages of 20.

Wire manager attaches to post legs and manages cords and cables.

Connect zone in desk has openings in bottom to allow for patch cord entry and exit.

Access to data is positioned at edge of desk located closest to the beam.

Access to power is positioned 21" from edge of desk.

Non-PVC electrical components are the standard offering with the option to order PVC components. For those trying to gain the LEED Innovation and Design credit, non-PVC should be selected.

All electrical components are cULus listed to the appropriate industry standards in accordance with the National and Canadian Electrical code.

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper installation of all electrical components.

Desking Power and Data

Freestanding Desk

Desks include a sliding surface or a cut-out option which opens to a connect zone in the understructure. Power and data are routed to the connect zone for easy user access and cord management.

► Specifying, page 176

Base power is required for plugging the power strip into an outlet, and must be accessible to meet building code.

Power strips can be placed above the worksurface. Connect power strips to the rail of the desk or low storage with either connect zone or mounted on the shared table. Power and data or power only are available.

Wiring and Cabling

Three wiring schematics are available—3+1, 2+2, and three circuits with separate neutrals (3SN). All the components in an electrical distribution system must use the same wiring schematic. For safety, the components are keyed, labeled, and color-coded to make it impossible to connect mismatched parts.

Wire manager attaches to post legs, and manages cords and cables.

Connect zone has openings in bottom to allow for patch cord entry and exit.

Access to power is positioned 21" from edge of desk.

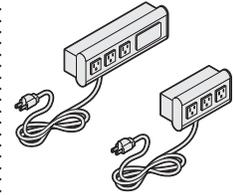

Modular power can be used with a freestanding desk as long as the desk is anchored.

Filler packages are available to fill unused power or data openings. They are offered in packages of 20.

Non-PVC electrical components are the standard offering with the option to order PVC components. For those trying to gain the LEED Innovation and Design credit, non-PVC should be selected.

All electrical components are cULus listed to the appropriate industry standards in accordance with the National and Canadian Electrical code.

Local electrical codes vary, so consult with your local authority having jurisdiction as they have final say if the products as installed are compliant with local code. Consult a qualified electrical contractor or engineer for the proper installation of all electrical components.

Two power strips are available—power only and power and data. Power strips can be mounted on the desk or low storage with connect zone rail or on the shared table. Cord length is 8'. Available PVC only.

Storage Power and Data

1½-high low storage units are available with a connect zone. Power and data can be routed to the connect zone for easy user access and cord management.
▶ Specifying, page 179

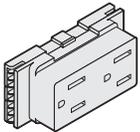

Modular powerkits are available for use in the connect zone when storage is parallel and tethered to the beam. Power and data are routed through an opening in the back of the storage and into the connect zone. Powerkits are ordered separately and include data housing.

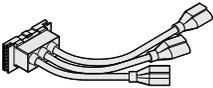

Product Details

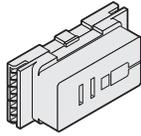

Modular powerkit includes a power block with harness, data housing, and a cover. The power block accepts one receptacle. The data housing accepts both modular furniture and NEMA faceplates. A filler is included.

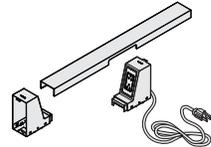

Duplex receptacles are available in 15- and 20-amps, isolated or system ground, with multiple line options. The same duplex receptacle can be used in the desk, 1½-high low storage, and the base area. Receptacles are ordered separately.

Modular flexible receptacles are available in 15-amp, isolated or system ground, with multiple line options. Flexible receptacles offer easy access to three outlets. The same flexible receptacle can be used in the desk and 1½-high low storage with connect zones. Not intended for use in the base area. Receptacles are ordered separately. Check for availability.

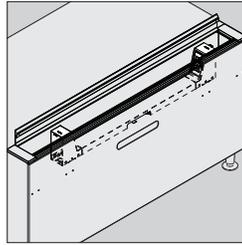

USB receptacles are available in three wiring schematics with multiple line options. USB receptacles offer easy access to two charging ports. Each port provides 1 ampere of output. USB receptacles conveniently charge a wide range of electronic devices. Some devices may not be compatible. The same USB receptacle can be used in the desk and 1½-high low storage with connect zones and the base area. Receptacles are ordered separately.

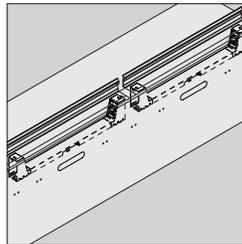

Power strips are available for use in the connect zone of 1½-high low storage. Base power is required for plugging the power strip into an outlet and must be accessible to meet building code. Duplex or flexible receptacles are prewired into the power strip. Cord length is 6'.

Hardwire power is also available for cities where code requires.

Storage units are offered in 30", 36", 42", and 48" widths and require a center cover when ordering powerkits for the connect zone. Cover width is optioned when ordering the kit.

Power and data can be placed on either end of the storage unit, opposite each other.

60"W and 72"W storage can accommodate one or two powerkits or power strips. Specify powerkits for use with 60"W or 72"W storage units, as the covers in the powerkits for use with 30"W or 36"W units will not fit properly in the larger size storage units.

Connect zone on low storage units can be used to attach worktools. Power and data access is still available.

Wiring and Cabling

Three wiring schematics are available—3+1, 2+2, and three circuits with separate neutrals (3SN). All the components in an electrical distribution system must use the same wiring schematic. For safety, the components are keyed, labeled, and color-coded to make it impossible to connect mismatched parts.

Non-PVC electrical components are the standard offering with the option to order PVC components. For those trying to gain the LEED Innovation and Design credit, non-PVC should be selected.

All electrical components are cULus listed to the appropriate industry standards in accordance with the National and Canadian Electrical code.

Local electrical codes vary, so consult with your local authority having jurisdiction as they have final say if the products as installed are compliant with local code. Consult a qualified electrical contractor or engineer for the proper installation of all electrical components.

Base Power and Data

Base power and data

can be positioned every 12" within the base area of the beam and allows access to users.

► Specifying, page 182

Modular powerkits are available for use in the beam base. They connect to various modular harnesses, depending on length needed. They include the power block with housing and a harness-to-harness connector for branching up to desking or storage, or to continue on to the next base power or harness-to-harness connector. Power block accommodates two back-to-back duplex receptacles which are located off the center of the block.

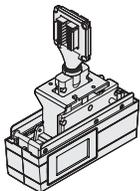

Modular harness is used to connect base powerkits.

Duplex receptacles are available in 15- and 20-amps, isolated or system ground, with multiple line options. The same duplex receptacle can be used in the desk, 1½-high low storage with connect zone, and the base area. Receptacles are ordered separately.

Data can be placed in the base area for user access. Data housing is ordered separately and accommodates back-to-back data (staggered) using modular furniture faceplates.

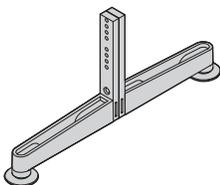

Product Details

Base powerkits include the power block with housing and an integral harness-to-harness connector for branching up to desking or storage, or to continue on to the next base power or harness-to-harness connector. Power block accommodates back-to-back power. Receptacles are ordered separately.

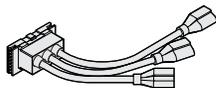

Access to power and data can occur in the base. Power and/or data can be placed every 1 foot. Where two beams are connected inline, access zones are 24" apart.

Support feet can be placed every 12" using the same locations as power and data. An additional position is available at the ends of the beam.

Tip: Power, data, or support feet cannot occupy the same position simultaneously.

Filler packages are available to fill unused power or data openings. They are offered in packages of 20.

Modular flexible receptacles are not intended for use in the base area. Check for availability.

Hardwire power is also available for cities where code requires.

Wiring and Cabling

Three wiring schematics are available—3+1, 2+2, and three circuits with separate neutrals (3SN). All the components in an electrical distribution system must use the same wiring schematic. For safety the components are keyed, labeled, and color-coded to make it impossible to connect mismatched parts.

Non-PVC electrical components are the standard offering with the option to order PVC components. For those trying to gain the LEED Innovation and Design credit, non-PVC should be selected.

All electrical components are cULus listed to the appropriate industry standards in accordance with the National and Canadian Electrical code.

Modular Harnesses and Branching Harness-to-Harness Connectors

Distributing Power Through the Beam

Modular harnesses and branching harness-to-harness connectors are used to distribute power through the beam. Harness-to-harness connectors are also used to branch power to connect zones in the desk and storage.

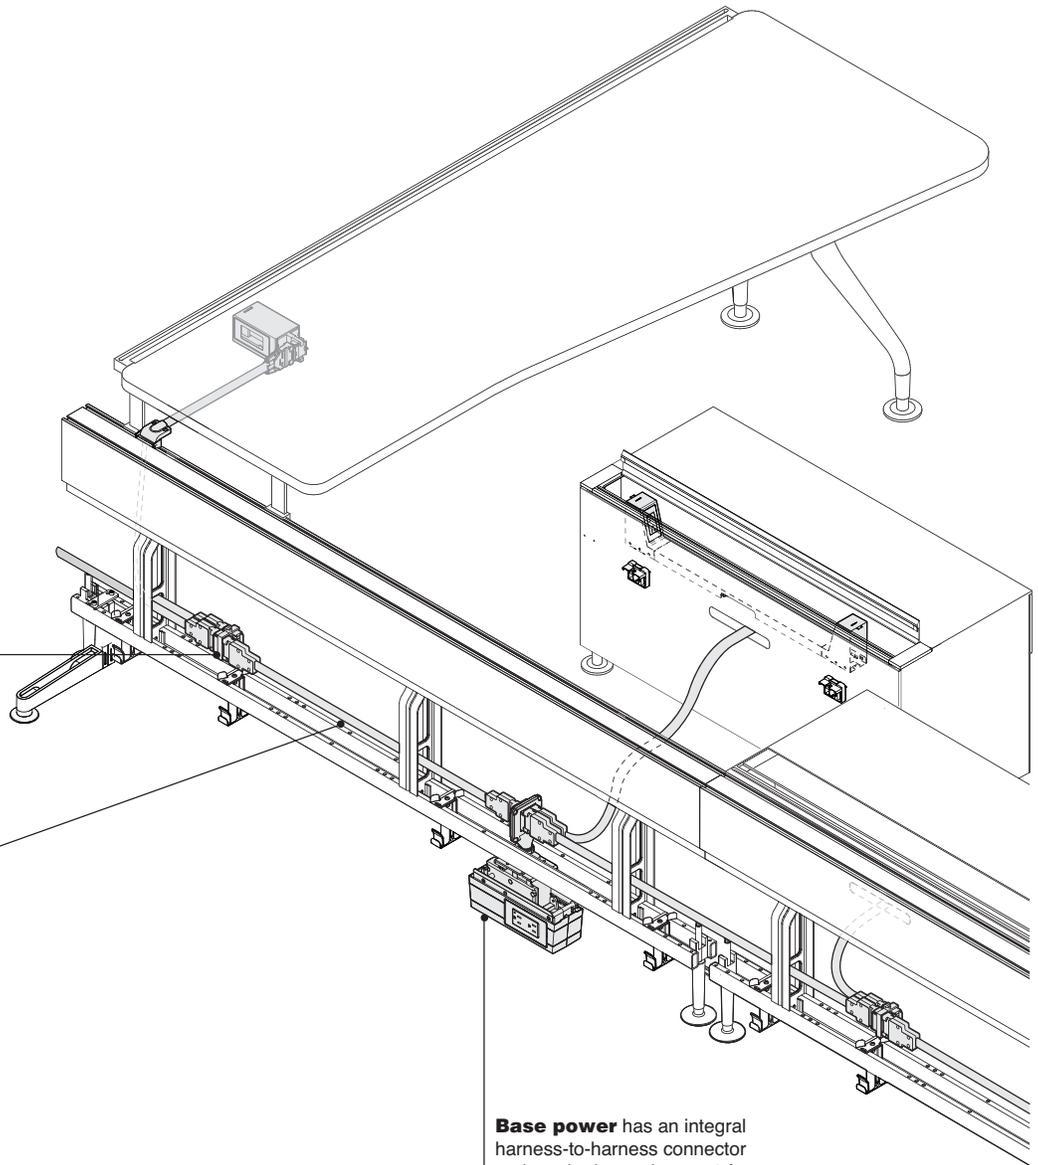

► Specifying, page 194

Harness-to-harness connectors can be placed on any 1 foot increment within the beam to simplify planning.

Branching harness-to-harness connectors

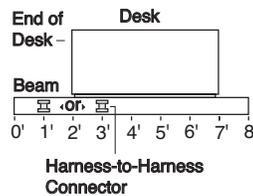

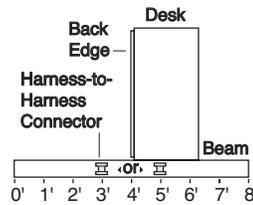

have four places where modular harnesses can connect. However, they can only power two connect zones, except at the end of a run where they can power three connect zones.

Modular harnesses are used to distribute power to the base area and connect zones. Harness-to-harness connectors are used to connect harnesses and branch power to connect zones.

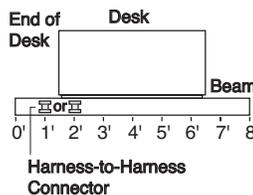

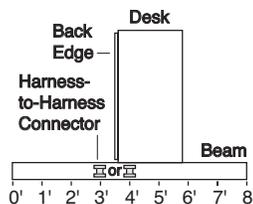

Base power has an integral harness-to-harness connector and can be located every 1 foot within the beam.

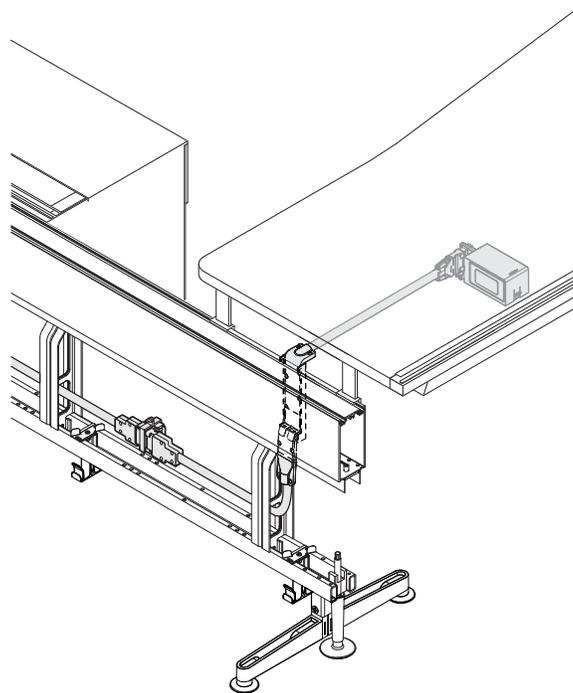

Product Details

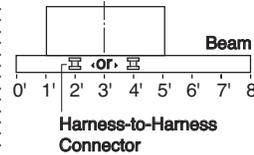

When a desk is placed on a 1 foot increment on the beam, place harness-to-harness connectors 1 foot from back edge or end of desk on either side.

Desks can be located in 1½" increments along the beam, so when desk is not on a 1 foot increment, place the harness-to-harness connector at the further 1 foot beam increment from the back edge or end of the desk on either side.

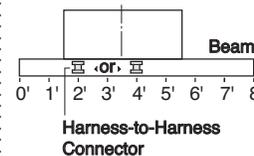

Storage Unit

When storage is placed with its centerline on a 1 foot increment on the beam, place the harness-to-harness connector 1 foot from centerline of the storage unit. Centerline planning is used regardless of storage width to simplify planning and manage connect zone harnesses.

Storage Unit

Storage can be located in 1½" increments along the beam, so when storage unit centerline is not on a 1 foot increment, place the harness-to-harness connector at the further 1 foot beam increment from the centerline of the storage unit. Centerline planning is used regardless of storage width to simplify planning and manage connect zone harnesses.

The beam can accommodate two power systems – for example, general power and uninterruptible power supply. If this applies to a design, plan each independently using the rules above. When using two power systems, one can be located in a connect zone and the other in the base area.

Wiring and Cabling

Base power has an integral harness-to-harness connector and can be located on every 1 foot within the beam. If using the base power harness-to-harness connector to power connect zones, follow the rules as noted.

Modular power can be brought to tethered desks, 1½-high low storage with connect zone, and the base area. Powerkits are ordered separately.

Three wiring schematics are available—3+1, 2+2, and three circuits with separate neutrals (3SN). All the components in an electrical distribution system must use the same wiring schematic. For safety, the components are keyed, labeled, and color-coded to make it impossible to connect mismatched parts.

All electrical components are cULus listed to the appropriate industry standards in accordance with the National and Canadian Electrical code.

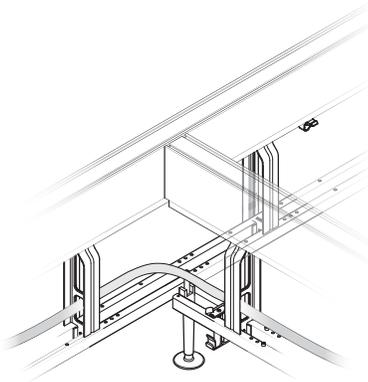

Non-PVC electrical components are the standard offering with the option to order PVC components. For those trying to gain the LEED Innovation and Design credit, non-PVC should be selected.

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper installation of all electrical components.

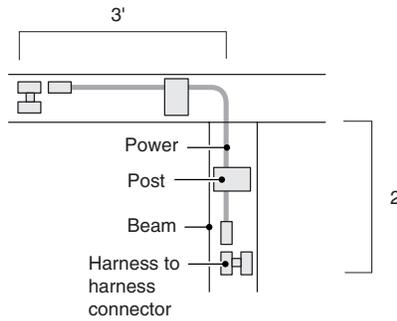

Modular Harnesses and Branching Harness-to-Harness Connectors

Power Harness Routing Through 90° Beams

In order to calculate the required modular harness length when routing power from one beam to another beam that is attached at 90°, use the logic shown in the following examples:

Field Cut Transition Kit

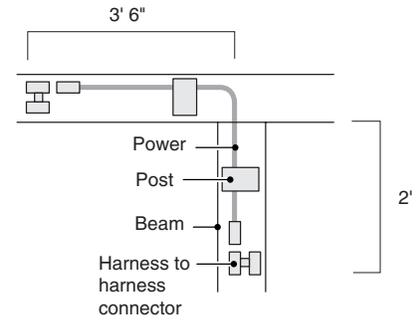

Condition 1

The 90° beam is to be located on a 1 foot increment and not on a post.

Use the same length harness as you would as if the harness-to-harness connectors were in the same beam.

$$\text{Harness length} = 36'' + 24'' = 60''$$

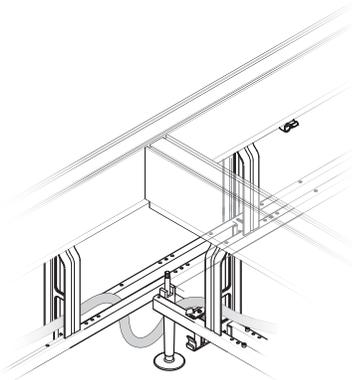

Condition 2

The 90° beam is to be located off of a 1 foot increment and not on a post.

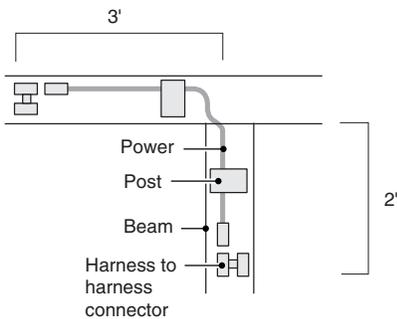

Use the next longer standard harness length (from those listed on page 194) than you would as if the harness-to-harness connectors were in the same beam.

$$\text{Harness length} = 42'' + 24'' = 66''$$

Use a 72" harness.

Transition Boot

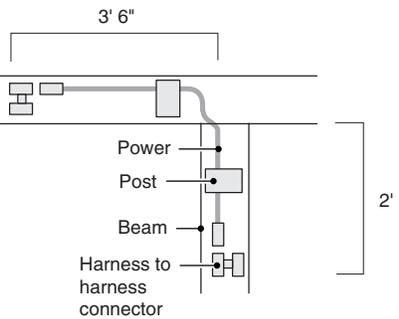

Condition 3

The 90° beam is to be located on a 1 foot increment and not on a post.

Use the harness that is 1 foot longer than you would as if the harness-to-harness connectors were in the same beam.

$$\text{Harness length} = 36'' + 24'' + 12'' = 72''$$

Condition 4

The 90° beam is to be located off of a 1 foot increment and not on a post.

Add 12" for the boot and use the next longer standard harness length (from those listed on page 194) as you would as if the harness-to-harness connectors were in the same beam.

$$\text{Harness length} = 42'' + 24'' + 12'' = 78''$$

Use an 84" harness.

Add-on modular power blocks and harnesses

can be used in three applications:

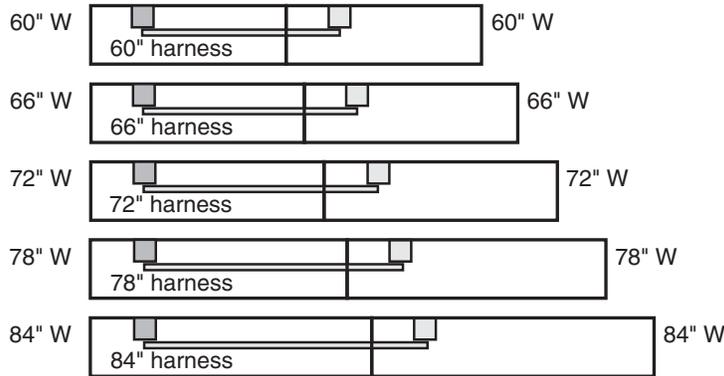

1. To daisy chain power within a benching application
2. To add additional power to a desk
3. Directly with a power infeed, particularly when a beam is not being used

Tip: Access to power is positioned 21" from edge of desk.

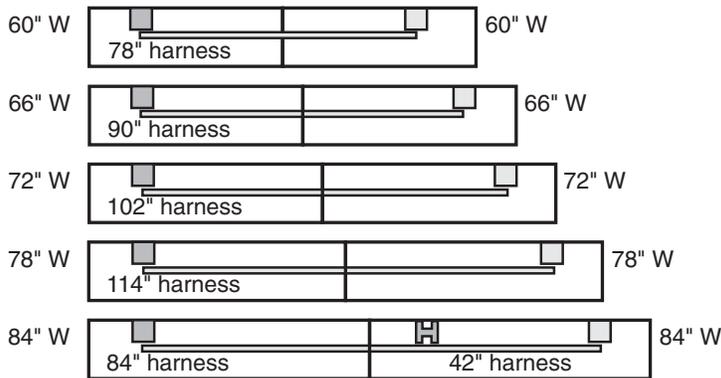

Legend

-  = Modular Powerkit
-  = Add-On Modular Power Block
-  = Harness-to-Harness Connector

1. Benching application – first position-to-first position

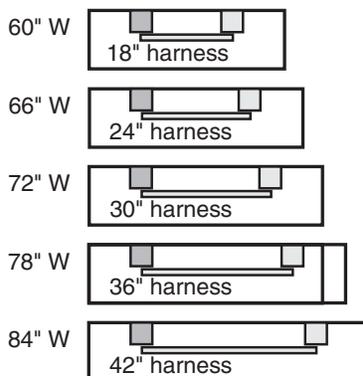

Benching application – first position-to-second position

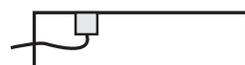

Benching application – second position-to-first position

2. Within a desk

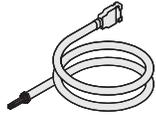

3. For use with power infeed

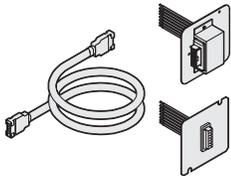

Building Interface

Building power and data can interface with the beam from the floor, wall/column, or ceiling. Both modular and hardwire infeeds are available.

Hardwire-to-modular power infeed is available in 12 and 24 foot lengths. The hardwired end is connected by an electrician to a junction box wherever it is located in the building. The harness is routed into the beam and connected to a harness-to-harness connector (or base power) which is located on a 1 foot increment within the beam. Non-PVC is standard. PVC version can be optioned.

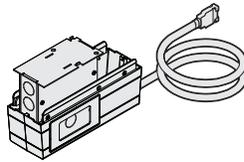

Modular-to-modular power infeed is available in 12 and 24 foot lengths. A straight/flush modular junction box faceplate cover is standard and is wired to a 4¹/₁₆" square junction box located in the building. The harness is then routed into the beam and connected to a harness-to-harness connector (or base power) which is located on a 1 foot increment within the beam. A 90° junction box faceplate can be optioned and is recommended for use at a wall or column. The straight/flush is generally used in the ceiling and floor. Non-PVC is standard. PVC version can be optioned.

Modular junction box faceplate can be ordered separately and used with any modular harness length when 12 and 24 foot lengths are not appropriate. Straight/flush and 90° faceplates are available. Non-PVC is standard. PVC version can be optioned.

Utility pole reaches a maximum ceiling height of 10 foot. Pole is 3"D x 6"W.

New York power infeeds are available. Non-PVC is standard. PVC version can be optioned. Hardwire-to-modular infeeds can also be used.

Hardwired/Chicago power infeeds are supplied by the electrician.

San Francisco requires metallic power-in conduit, which is standard product in c:scape. When infeed is coming from floor or wall, liquid tight metallic conduit may be required.

Base power infeeds are not available.

Wiring and Cabling

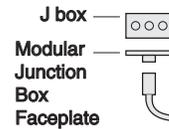

Three wiring schematics are available—3+1, 2+2, and three circuits with separate neutrals (3SN). All the components in an electrical distribution system must use the same wiring schematic. For safety, the components are keyed, labeled, and color-coded to make it impossible to connect mismatched parts.

Non-PVC electrical components are the standard offering with the option to order PVC components. For those trying to gain the LEED Innovation and Design credit, non-PVC should be selected.

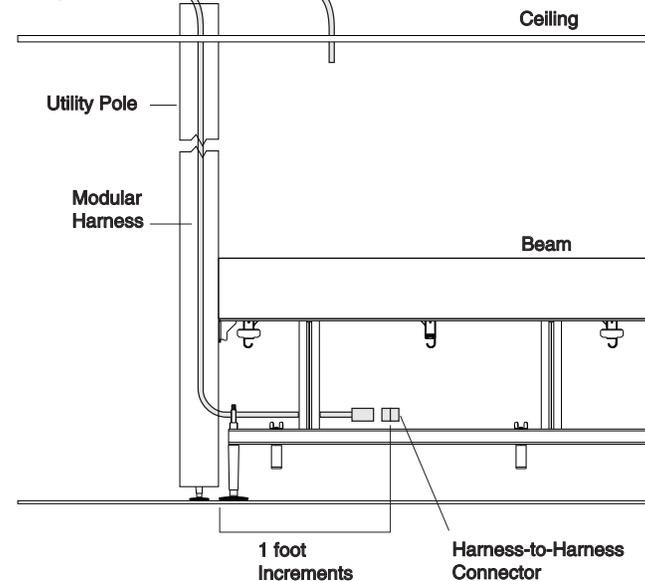

All electrical components are cULus listed to the appropriate industry standards in accordance with the National and Canadian Electrical code.

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper installation of all electrical components.

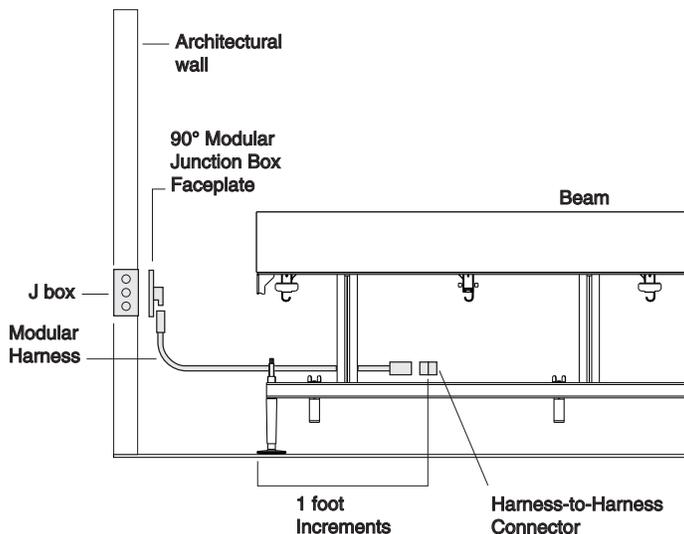

Modular-to-Modular Infeed

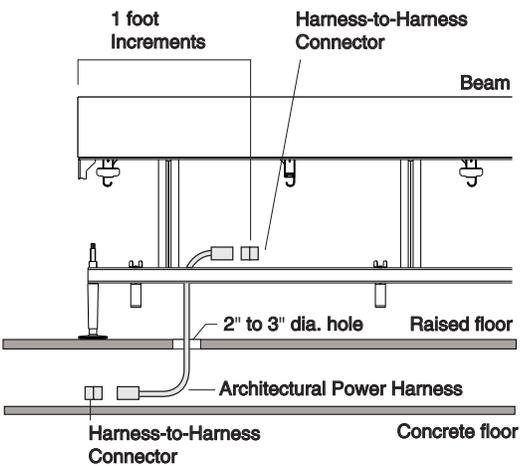

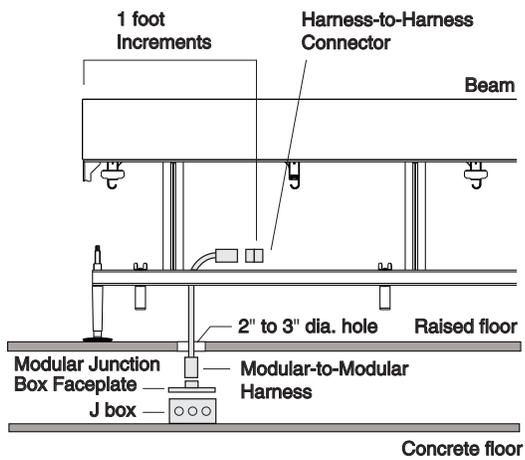

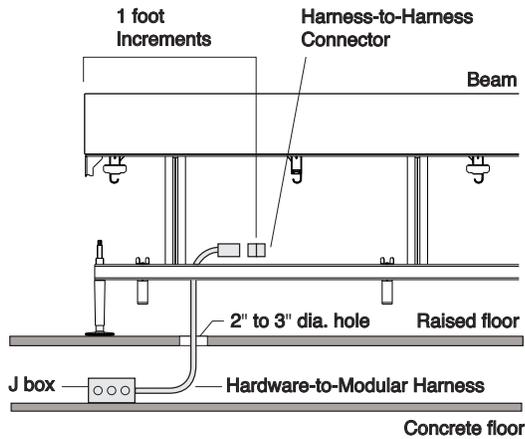

Hardwire-to-Modular Infeed

Utility poles are available and must be placed at beam end of runs. Power infeed is ordered separately.

When building interface is located in a wall or column, the use of a modular-to-modular infeed is recommended rather than hardwire to modular. It is also recommended that 90° faceplate be ordered separately and the appropriate modular harness length be used to reach from the modular faceplate to the first harness-to-harness connector or base power, which are located on 1 foot increments within the beam.

When building interface is located under the floor, either a hardwire-to-modular or a modular-to-modular infeed can be used. If using modular-to-modular infeed, typically the straight/flush faceplate works best and can be ordered separately along with the appropriate harness length needed to reach from the modular faceplate to the first harness-to-harness connector or base power, which are located in 1 foot increments within the beam. Entry into the beam can occur anywhere along the beam and directly under it. To stay within the footprint of the beam, the floor entry hole must be at least 2¹/₄", but less than 3" in diameter.

Surface Materials

This listing includes all the surface material choices that are available for the products in this specification guide.

Resources

For more information about surface materials, refer to the following resources:

Additional surface materials specification tools are available to assist you in the specification process—the Surface Materials Binders.

The global surface materials palette is a core collection of finishes that is available across multiple geographies (Americas/EMEA – Europe, Middle East, and Africa/APAC – Asia Pacific) and on global product lines, where applicable. For a list of finishes included in the offering, see the *Surface Materials Reference Manual*. Additional details, like product approvals by geography and finish number conversions, can also be found in the *Surface Materials Reference Manual* or see steelcase.com/surfacematerials.

Surface Materials Binders

- Surface Materials Reference Manual
- A complete set of swatch cards for hard surfaces, vertical surface fabrics, and seating upholstery

Paint

► See *Surface Materials Reference Manual* for a listing of available paints for Victor2.

Steelcase Surfaces

Tip: All products may not be available in all colors listed below.

► See page 202 for an overview of the paint colors available on each component.

- Applies to:
- c:scape beam covers
 - c:scape storage

Turnstone Laminate Collection

A selection of laminates and edge bands in this collection are available on Steelcase brand products. This collection is available with standard leadtimes and supported like standard laminates to help make ordering easy. Please see the Turnstone section of village.steelcase.com for swatching information.

2535 Virginia Walnut
2536 Blackwood
2612 Marbled Maple
2614 Chocolate Walnut
2615 Marbled Cherry

Custom Surfaces

Open Line Laminate (OLL)

This service allows you to order non-standard laminate at an additional processing fee of \$67 U.S. per worksurface or top, plus the cost of the laminate.

When processing orders for Open Line

laminate on c:scape, specify 2900 in the laminate finish field and enter the OLL manufacturer information. Enter the required edge finish as you would a standard laminate.

Laminate Approval and Material Requirements

To confirm whether a particular laminate has already been tested for use on a specific Steelcase product or to determine material square foot requirements:

- Visit www.steelcase.com

For additional information,

refer to the *Surface Materials Reference Manual*.

E = Established

Wood

Applies to:

- c:scape desks, storage tops, and drawer fronts
- c:scape collaborative lounge tables

Steelcase carefully selects veneer and solid wood for consistent color and grain structure. Wood is a natural material and variations will occur in color, grain and texture. These variations are part of the inherent natural beauty of wood and are not considered defects.

All wood products will darken with age and exposure to ultraviolet light. This is especially apparent with cherry and maple veneer. We recommend that desk accessories be rearranged periodically to ensure even aging of wood surfaces.

When storing your wood furniture, please follow the following guidelines:

- Do not store products in trailers
- Store products in areas that simulate office temperatures (60°F to 90°F)
- Store products in areas that maintain constant, office-like humidity levels
- Keep product away from light. Cover products to make sure they are not exposed to light.

Steelcase Surfaces

Veneer

Veneers are matched for proper balance and consistency. Veneers are available flat cut or quarter cut, except for Oak, which is rift cut. Refer to the *Surface Materials Reference Manual* for descriptions of each cut.

Open-pore finish is a medium gloss finish that leaves the wood grain texture visible to the eye and distinguishable to the touch.

▶ See *Surface Materials Reference Manual* for a listing of available veneers for Victor2.

Tip: Flat-cut veneer will be applied vertically on c:scape low storage. Quarter-cut and rift-cut will be applied horizontally.

Flat-cut open-pore finish choices

- 3062 FC/OP Graphite Walnut
- 3402 FC/OP Clear Cherry (Aged)
- 3412 FC/OP Natural Cherry **E**
- 3422 FC/OP Medium Cherry
- 3522 FC/OP Clear Maple*
- 3572 FC/OP Amber on Maple **E**
- 3592 FC/OP Blonde on Maple
- 3702 FC/OP Clear Walnut
- 3712 FC/OP Natural Walnut
- 3722 FC/OP Dark Mahogany on Walnut
- 3752 FC/OP Medium Walnut
- 3762 FC/OP Dark Walnut
- 3772 FC/OP Medium Mahogany on Walnut

E = Established

Quarter-cut open-pore finish choices

- 3042 QC/OP Ash*
- 3222 QC/OP Clear Maple*
- 3272 QC/OP Amber on Maple **E**
- 3292 QC/OP Blonde on Maple
- 3302 QC/OP Clear Walnut
- 3312 QC/OP Natural Walnut
- 3322 QC/OP Dark Mahogany on Walnut
- 3352 QC/OP Medium Walnut
- 3362 QC/OP Dark Walnut
- 3372 QC/OP Medium Mahogany on Walnut
- 3382 QC/OP Graphite Walnut

Rift-cut open-pore finish choices

- 3602 RC/OP Desert Oak
- 3612 RC/OP Warm Oak **E**
- 3692 RC/OP Espresso Oak

Full-fill finish is a medium-gloss finish that completely fills the grain texture, yet allows the grain pattern to be seen. The wood has a lustrous, satiny look, and it is smooth to the touch. This finish is available on the wood desks or top only.

Flat-cut full-fill finish choices

- 3064 FC/FF Graphite Walnut
- 3404 FC/FF Clear Cherry (Aged)

- 3604 RC/FF Desert Oak
- 3614 RC/FF Warm Oak **E**
- 3694 RC/FF Espresso Oak

**To ensure an understanding of the color ranges and characteristic variations of natural veneer, a sign-off sheet is required prior to orders being accepted for this clear-coat finish. The sign-off sheet is available through Steelcase advertising stock. Please use form number 09-0000756 for 3042, form number 05-0001370 for 3222 and 3224.*

Steelcase Surfaces

Composite Veneer

Composite veneers are an engineered wood intended to create specific grain patterns and characteristics. They are pre-stained and finished with Steelcase's Clarity water-borne UV topcoat, which protects the environment while providing durability and clarity. Only open-pore finishes are available on composite wood. Composite veneer and matching edge bands are available on most Steelcase brand products. Composites, for use as a solid nosing substitute, are not available. Steelcase does not recommend mixing composite veneers with natural solid nosing because composite and natural wood grain and color matching are rarely compatible. Composite veneers are Graded-In as Wood Group 1 pricing.

Flat-cut open-pore finish choices

- 3JDJ FC/OP Oak Composite
- 3JFX FC/OP Maple Composite
- 3JHX FC/OP Cherry Composite
- 3JJX FC/OP Walnut Composite

Quarter-cut open-pore finish choices

- 3HGX QC/OP Oak Composite
- 3JEX QC/OP Maple Composite
- 3JGX QC/OP Cherry Composite

**To understand more about composite ordering, lead-times, and pricing, please consult the composite sign-off sheet available through Steelcase advertising stock, form number 14-0000141. A sign-off is required prior to orders being accepted for composite projects.*

Steelcase Surfaces

Premium Veneer

A selection of Premium veneers in this collection are available on most Steelcase brand products. The collection will be available as close to standard leadtimes as possible. However, because adequate supplies of veneer and solids must be secured, all orders will be scheduled individually. Leadtimes will vary based on Premium veneer and Premium solids availability at the time the order is placed. The collection is Graded-In as Wood Group 2 and Wood Group 3, and supported like standard veneers to make ordering easy. Please see the Steelcase surface materials section on village.steelcase.com for sample information and product line availability. All premium veneers are in clear-coat.

Quarter-cut open-pore finish choices

- Wood Group 2**
- 3032 QC/OP Dark Thin Line Bamboo
- 3052 QC/OP Ribbon Sapele

Wood Group 3

- 3832 QC/OP Figured Anegre
- 3842 QC/OP Figured Makore

Note: Full-fill finish is not available on Premium veneers as a standard. To ensure an understanding of the color ranges and characteristic variations of natural veneer, a sign-off sheet is required prior to orders being accepted for this clear-coat finish. The sign-off sheet is available through Steelcase advertising stock. Please use form number 09-0000755 for 3032, form number 09-0000757 for 3052, form number 09-0000758 for 3832, and form number 09-0000759 for 3842.

Custom Surfaces

Customiz stain is a service that allows you to create your own stain colors and finishes on standard veneer. Customiz stain color is available on all products lines that offer wood veneer.

A \$500 stain-matching fee applies on CUSTOMIZ requests (Exception: The \$500 fee does not apply on matches to Coalesse standard finishes or for a low-gloss finish request on a standard color.) The \$500 fee covers the cost of formulating the Customiz color finish and applies regardless of whether or not an order for product is placed.

In addition, an approval form must be signed to indicate customer acceptance of Customiz match. A \$1,500 initiation fee will be charged prior to first order entry. This initiation fee activates the finish for unlimited use on any Steelcase product for an 18 month time period. After the 18 month time period has lapsed, the Customiz finish may be reactivated for another 18 months for a \$1,000 fee at any point within five years after the \$1,500 initiation fee was paid. If the finish is not reactivated within five years after the \$1,500 initiation fee was paid, the finish will be culled and the customer will need to pay the \$1,500 initiation fee again. All style number related Customiz charges products are no cost as of April 2014. The matching and initiation fees are not discountable.

Customiz stain takes 10 days to formulate. Consult the *Surface Materials Reference Manual* for more information. Custom veneers are also available and must be quoted by Steelcase special group. Customiz stain on custom veneers takes 2 to 4 weeks to formulate.

Requirements and information on ordering a Customiz stain color are found in the *Surface Material Reference Manual*.

Tip: When Customiz stain is specified, the veneer will be applied vertically.

* These solid color and woodgrain edge colors are a polyolefin blend, PVC-free material for 3 mm and 1 mm edge banding.

Note: Light color plastic edges are susceptible to degradation due to normal wear and tear. Staining (e.g., ball point pen or clothing dyes such as blue jeans) and dirt effects are more pronounced in light colors and are not considered defects.

Tip: Alloy P525 Polar and P526 Skim are light in color. As a result, some lighting conditions can reveal a "picture framing" effect around the edge of the screen. Steelcase recommends ordering a test screen in these two finishes, for approval by the customer, before purchasing large quantities.

2536 Blackwood	6243 Blackwood
2612 Marbled Maple	6676 Marbled Maple
2614 Chocolate Walnut	6677 Chocolate Walnut
2615 Marbled Cherry	6678 Marbled Cherry

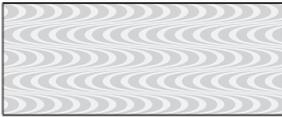

* A selection of laminates and edge bands in this collection are available on Steelcase brand products. This collection is available with standard leadtimes and supported like standard laminates to help make ordering easy.

E = Established

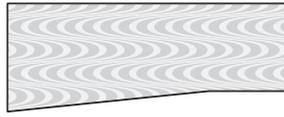

Wood Veneer Grain Directions

The appearance of wood veneer may change slightly depending on the angle from which it is viewed. This natural phenomenon is called polarization, and it can be seen on natural veneer, and to a lesser extent on composite veneer. Polarization is often noticed on surfaces installed at a 90-degree angle with each other. Please refer to the following illustrations for an understanding of grain direction on your installation.

c:scape Desking—Wood Veneer

Straight

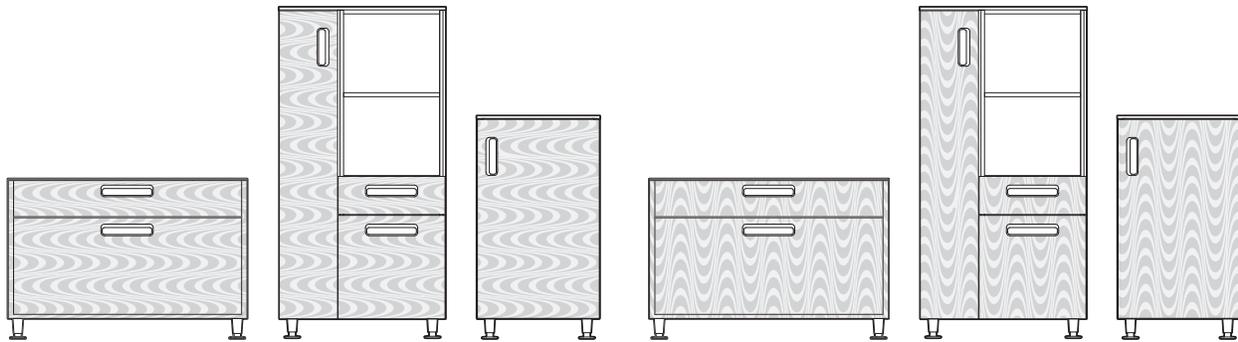

Transition

Tapered

Veneer is standard with the grain directions shown.

c:scape Low Storage, Tower, and High Ped—Wood Veneer

Quarter cut and rift cut
(horizontal direction)

Flat cut veneer*
(vertical direction)

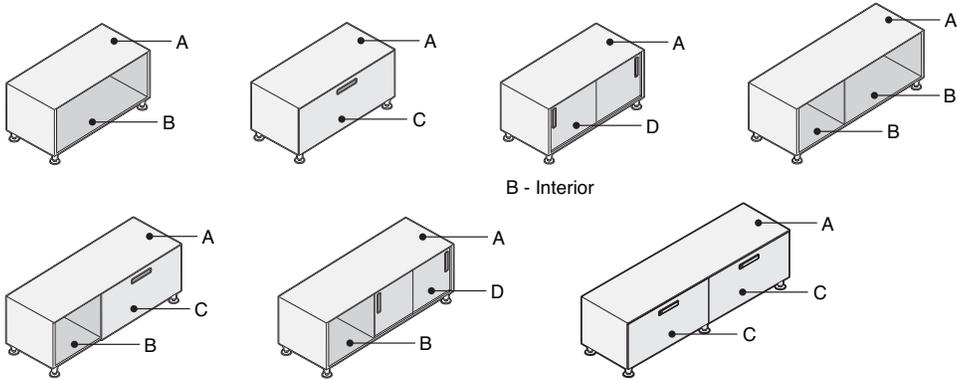

Veneer is standard with the grain directions shown.

*When Customiz stain is selected, the veneer will be applied vertically.

Lock and Keying

All locking products are standard with factory-installed, keyed-random locks. Consecutive, specific, and random keying are available as field-installed options.
Exceptions: Individual locking drawers are available only with field-installed locks.

Locks consist of a factory- or field-installed lock cylinder and a factory-installed lock face ring.

Two types of locks are available — the standard keying system (FR series) and the master keying system (XF series). All the locks in the XF series can be opened with a single master key.

Factory-Installed Keying

Factory-installed locks are always key random (standard) or master key random (option). Key random means that the locks will be assigned arbitrarily at the factory with key numbers ranging from FR305 to FR454 (Master keying numbers: XF1001 to XF1150). All locks within a unit will be keyed alike.
Tip: Random keying can mean that different furniture

units will have the same key number. If you must have all locks keyed differently, you should specify field-installed, key specific or key consecutive lock cylinders.

▶ See below.

Key Random

- FR305
- FR421
- FR305

or

- XF1011
 - XF1042
 - XF1011
- } XF Master Key

Required to Specify

Master key random	+ \$23	Specify with master key random.
--------------------------	--------	---------------------------------

Field-Installed Keying

Field-installed locks are only available on products that include factory-installed lock mechanisms.

Specify “plug” when specifying furniture, and the product will ship with a plastic plug in place of the lock cylinder.
Tip: For products with optional lock colors, make sure to specify the color for both the lock and lock face ring.

Front-removable lock cylinders must be specified separately. You must also order a special lock tool to install or remove lock cylinders in the field.
Tip: Lock tools are reusable. You do not need to order additional lock tools with every furniture order.

Lock cylinders will be shipped separately so that you can install the locks when you are ready.

Three keying choices are available for field installation—random (standard), specific, and consecutive. All three are also available with master keying, which means that all locks can be opened with a single master key.

Key random means that the locks will be assigned arbitrarily at the factory with key numbers ranging from FR305 to FR454 (Master keying numbers: XF1001 to XF1150).
Tip: Random keying can mean that different furniture units will have the same key number. If you must have all locks keyed differently, you should specify key specific or key consecutive lock cylinders.

Key Random

- FR305
- FR421
- FR305

or

- XF1011
 - XF1042
 - XF1011
- } XF Master Key

Key specific means that you can specify any key number from FR305 to FR454 (Master keying numbers: XF1001 to XF1150). This option can be used to key all the furniture units in a workstation or department the same.
Tip: Designate the quantity per key number in your specification.

▶ See example at right.

Key Specific

- FR350
- FR350
- FR350

or

- XF1020
 - XF1020
 - XF1020
- } XF Master Key

Key consecutive means that you can specify lock numbers in a consecutive order to ensure that no two locks have the same key number until the key sequence repeats. You must select a beginning key number from FR305 to FR454 (Master keying numbers: XF1001 to XF1150).

Key Consecutive

- FR350
- FR351
- FR352

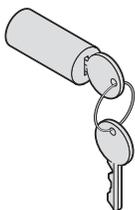

or

- XF1020
 - XF1021
 - XF1022
- } XF Master Key
