## frame kit overview

Frame kits are used together to create the structural frame of the Altos wall. Frame kits are specified after the Fascia configurations has been determined.

**Corner Cover (FKCN90) and Hardware Kit (FKCH90)** (shown)

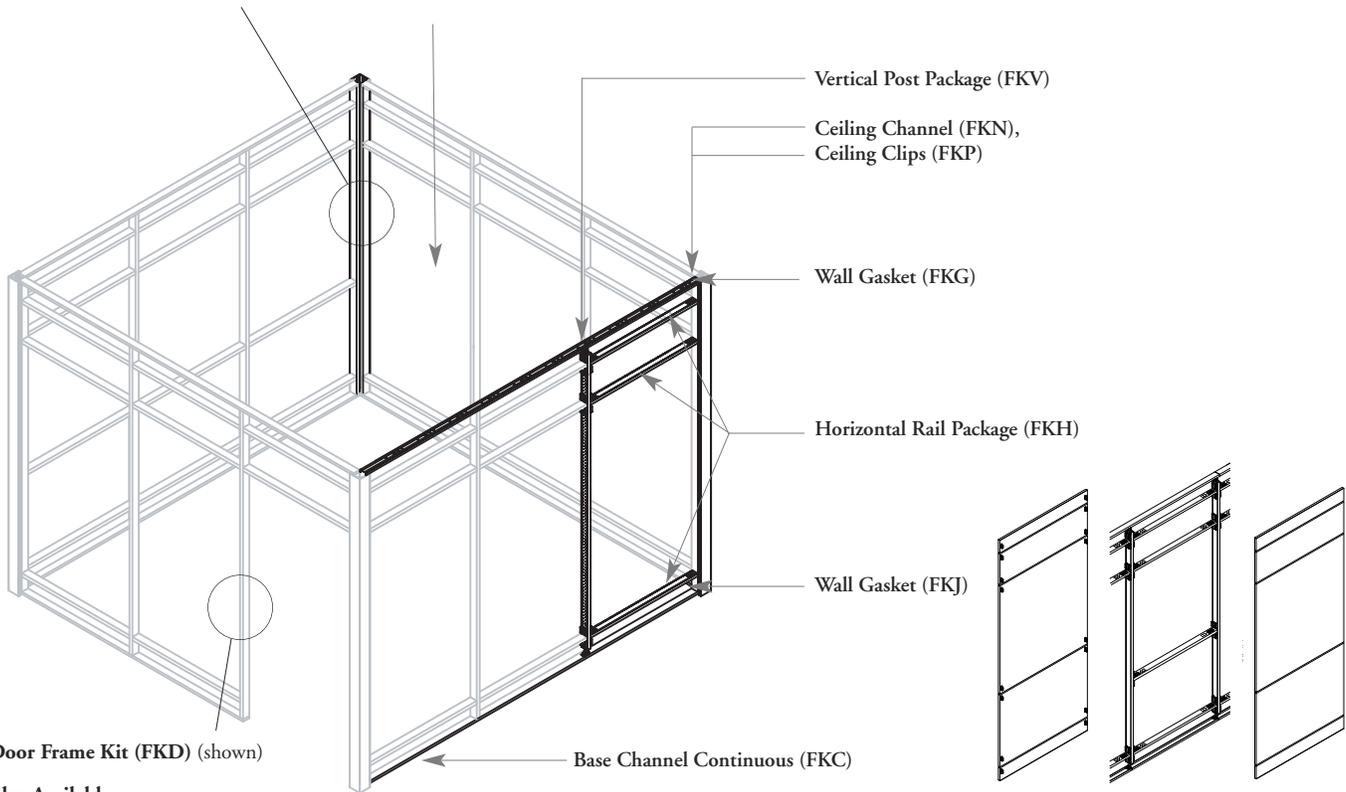

**Also Available:**

FKCN132 and FKCH132, FKCN133 and FKCH133, FKCN180 and FKCH180, FKCA4, FKCA2, FKCA3

**Recycled Cotton Insulation (FAI)** (not shown)

Recycled cotton insulation used within the Altos wall cavity to improve STC. Available as a 50' x 4' roll cut to size on site.

124

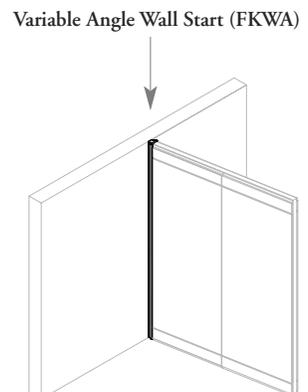

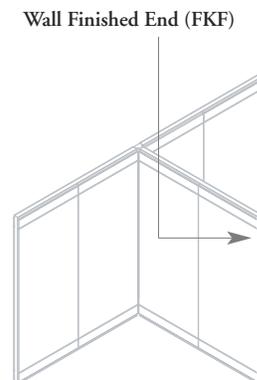

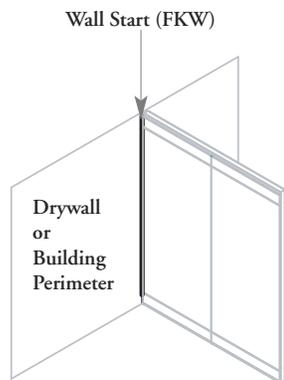

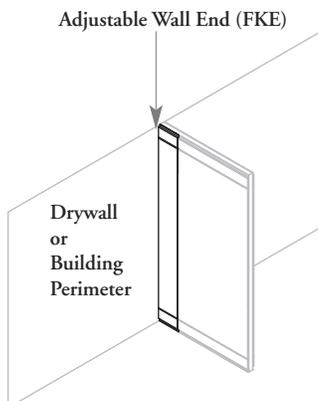

**Door Frame Kit (FKD)** (shown)

**Also Available:**

FKTF, FKTS, FKRT, FKRS, FKRSS

Frame Kit packages are for vertical posts and horizontal rails are specified to coordinate with Fascia elevations chosen.

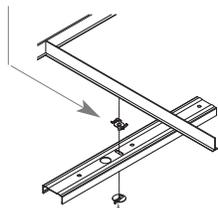

# ceiling & base channel basics

- ❗ A Ceiling Channel (FKN) is required over entire wall run, including openings and corner connections in all applications of Altos wall system
- See page 72 for Vertical Post Fascias

### Ceiling Clip (FKP)

- Is a non-permanent method of connecting the ceiling channel to the suspended ceiling
- **Cannot** be connected to all types of ceilings – site verification required
- Non-marking and need to be ordered separately from ceiling channel
- Accommodate the changing wall locations without defacing the T-Bar

#### Ceiling Clip Upper

#### Ceiling Clip Lower

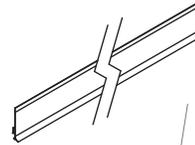

### Horizontal Grommet (FBG)

- (not shown)
- The Horizontal Grommet provides a finish to the Horizontal Rail cut outs
- Optional for use with solid and fabric fascias. **Cannot** be used with Glass Fascias

### Wall Gasket (FKJ)

- Is a light and sound seal between the bottom of the wall system and the finished floor and the top of the wall system and the ceiling
- Minor height variations in floor and ceiling surfaces may be concealed by the wall gasket – available in 10'-0" lengths only

### Vertical Reveal Cover Kit (FKJC)

The Vertical Reveal Cover provides a trim for vertical post when Platinum or Storm White gaskets are used

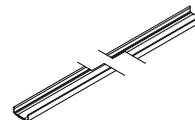

### Horizontal Rail Package (FKH)

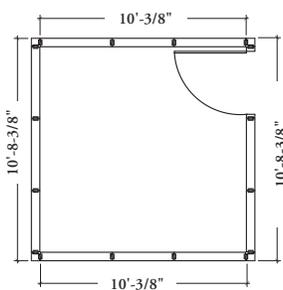

- Consist of horizontal rails and one Base Channel – Modular (FKB)
- Horizontal pass-through of electrics and communications is possible through the openings in the horizontal rails
- One Package is shared between the inner and outer elevation of a wall module
- Are universal and are used for both Solid and Glass Fascias
- Horizontal Rail Packages are included with the Pocket Door (FDKP/FDKS) in full-height and segmented-height options and do not need to be ordered separately
- **Must** specify base and ceiling fascia height being used
- When the 4" fascia is specified, female mounting clips are installed on the Horizontal Rail. When the 6" fascia is specified then female clips are mounted on the Vertical Posts

### Base Channel (FKC)

- Horizontal frame work of all wall assemblies
- Gap tape is provided along the underside of the channel to add stability and an acoustic barrier without mechanical attachments to the floors
- Can also be mechanically fastened to the floor if a more secure or permanent attachment is required (hardware not included)
- Available in 10" widths only

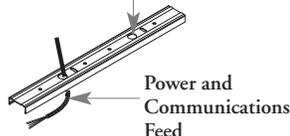

To determine the number of Ceiling Channels (FKN) required for the length of a wall run, take the total linear footage multiplied by 0.14

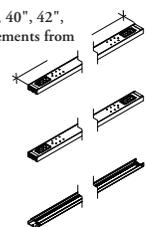

### Ceiling Channel (FKN)

- Attaches to the ceiling and supports the Vertical Post Packages
- Is an inverted steel U-channel start and can be cut to size on site
- Holes are punched into the Ceiling Channel to facilitate power and communications feed from the ceiling into the wall
- Is available in 10'-0" lengths only
- Can be attached to ceiling at any angle

#### Ceiling Channel

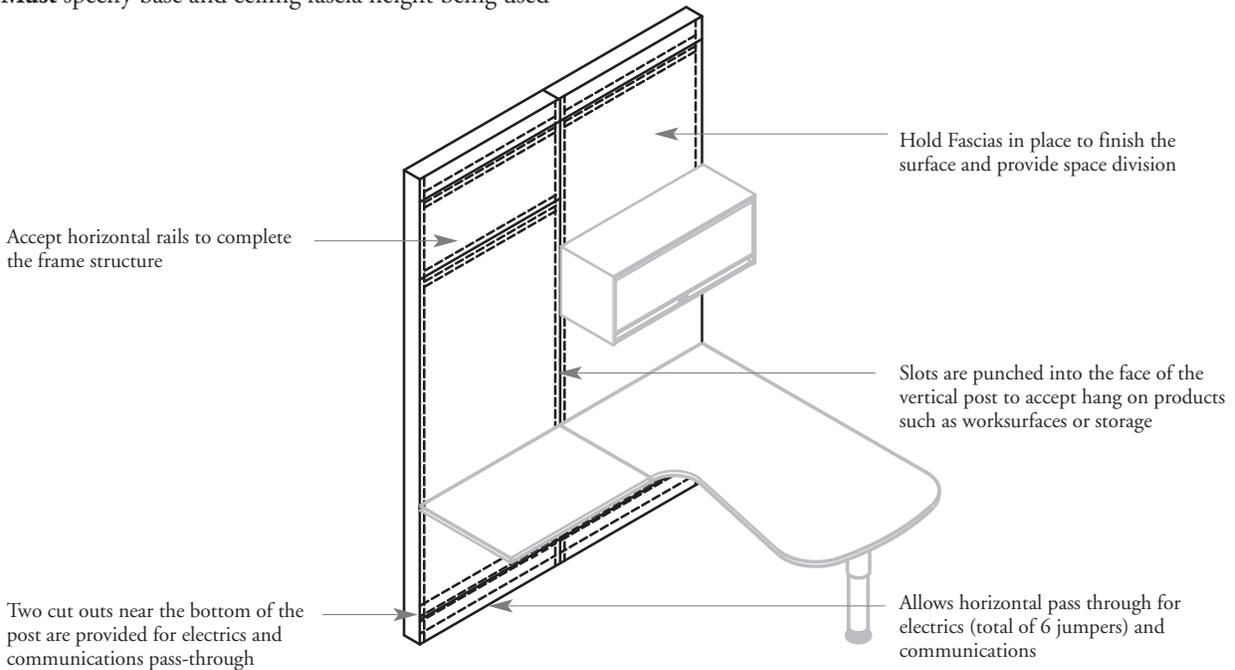

12", 18", 24", 30", 40", 42", 48" and in 1" increments from 12" - 48"

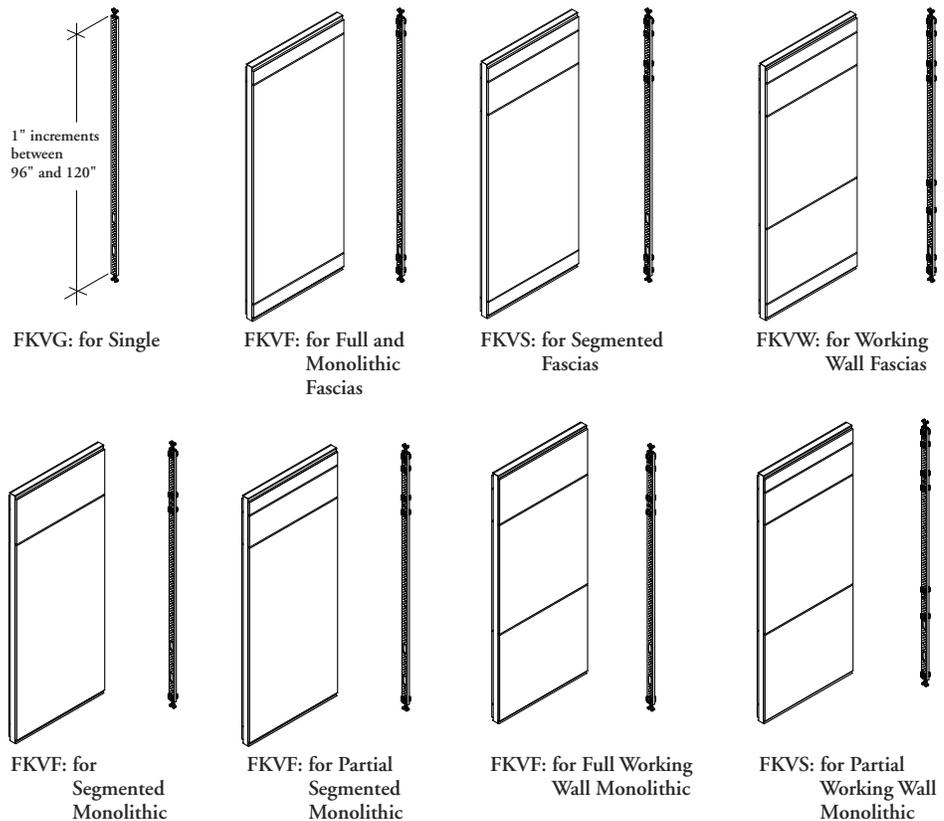

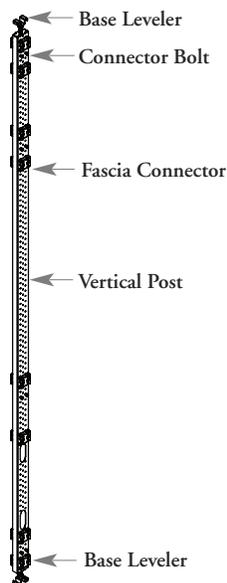

## vertical post basics

The Vertical Post Package extends from finished floor to finished ceiling and is the vertical support of the Altos frame.

- Vertical Post Packages are universal and also fulfill the vertical post requirements for door openings
- The levelers allow for adjustment of  $+1-1/2$  /  $-0.5$ " independently at the top and  $+1-1/2$  /  $-0.5$ " independently at the bottom
- Must** specify base and ceiling fascia height being used

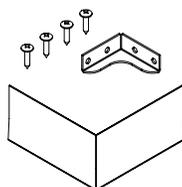

### Vertical Post Package (FKV)

# 90° corner connection basics

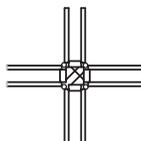

Walls can be connected at right angles in two-way, three-way and four-way configurations.

- Brackets connect post packages to form a corner
- The quantity of brackets required may vary according to wall heights or wall material
- Can enclose electrics & communications travelling from wall-to-wall or from ceiling down to glass modules
- Covers for two-Way and three-way corners are in the Fascias Section

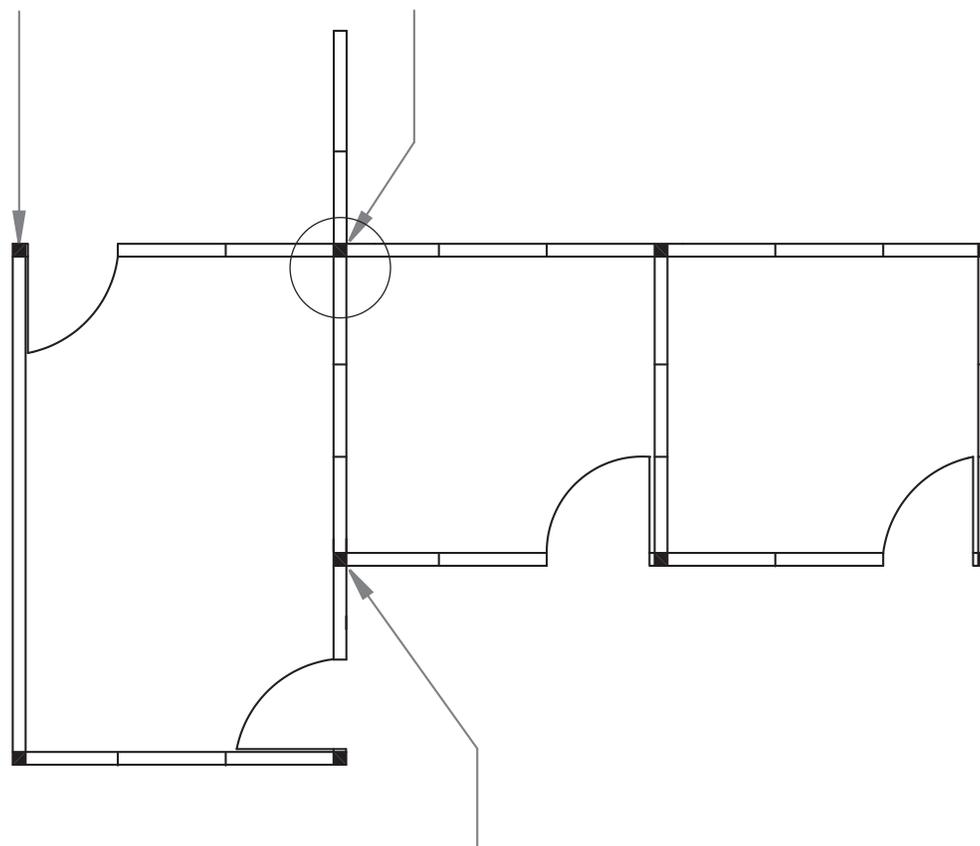

**Two-Way 90° Frame Hardware Kit (FKCH90)**

Provides the framework to connect two walls at 90°.

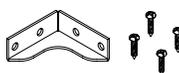

**Four-Way Connection 90° Connection (FKC4)**

Creates a full-height connection between four walls which are connected at 90°.

**Three-Way 180° Frame Hardware Kit (FKCH180)**

Provides the framework to connect three walls at 180°.

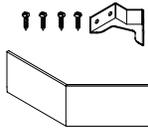

## 135° corner connection basics

Walls can be connected at 135° in two-way and three-way configurations.

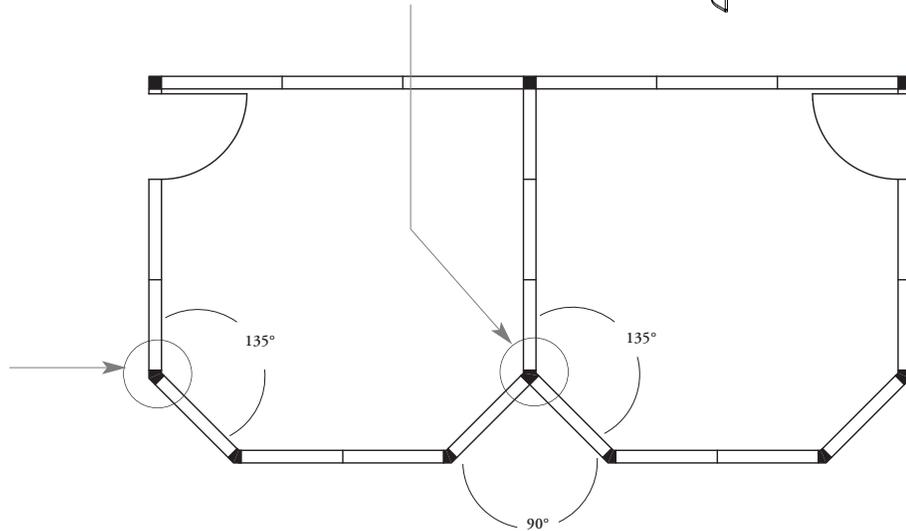

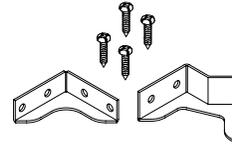

❗ Covers for 135° corners are in the Fascias Section.

128

**Two-Way 135° Frame Hardware Kit (FKCN132)**  
Provides the frame work for two walls to be connected at 135°.

**Three-Way 135° Frame Hardware Kit (FKCH133)**  
Provides the framework to connect to three walls at 135°.

# frame kits & components

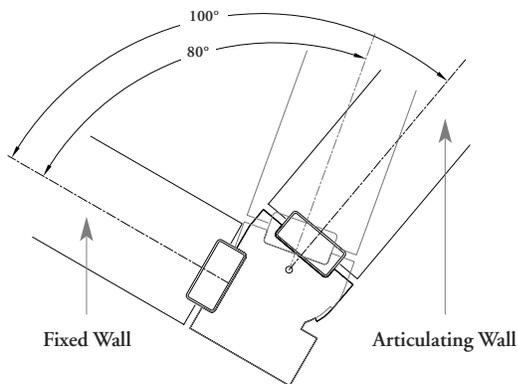

## articulating corner basics

Articulating Corners are used to change the angle of an Altos wall run.

- Articulating Corners are available in two-way and three-way configurations
- All Articulating Corners accommodate a range of adjustment from  $-10^{\circ}$  to  $+10^{\circ}$
- Finished in anodized aluminum

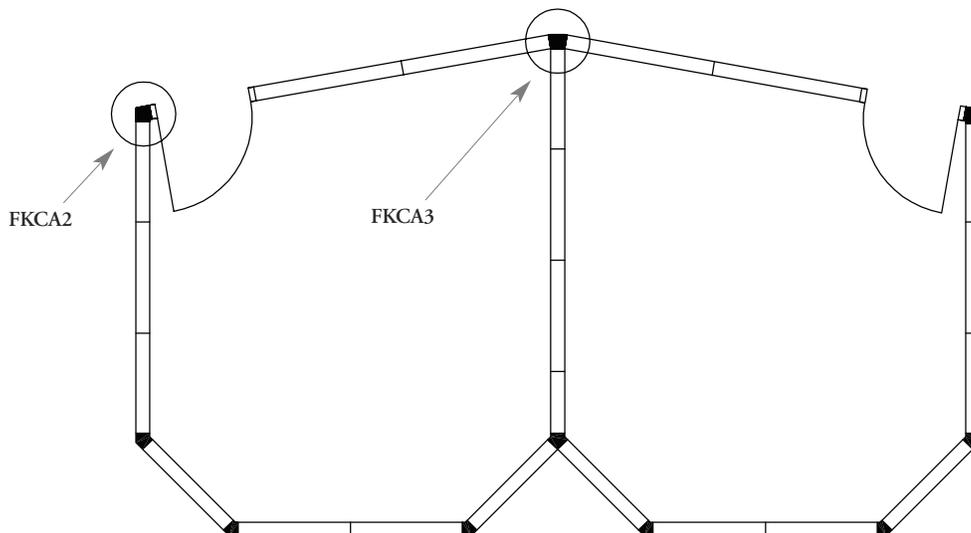

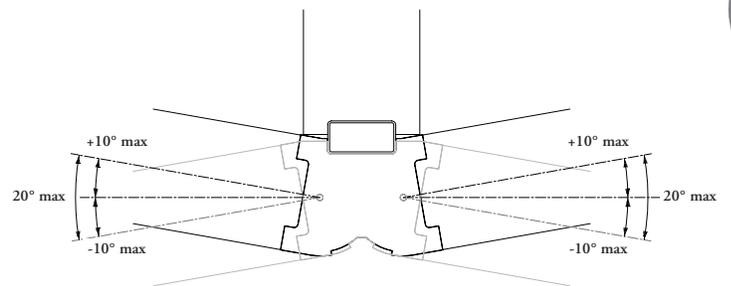

### Articulating Two-Way Corner (FKCA2)

- Connects two Altos walls between  $80^{\circ}$  and  $100^{\circ}$
- Articulating wall can be on either side of corner
- Provides both the connecting hardware and cover

### Articulating Three-Way Corner (FKCA3)

- Connects two Altos walls between  $80^{\circ}$  and  $100^{\circ}$  with a third fixed Altos wall
- Both sides of corner can be angled independently, each side allows for a maximum  $20^{\circ}$  of rotation ( $\pm 10^{\circ}$ )
- Provides both the connecting hardware and cover

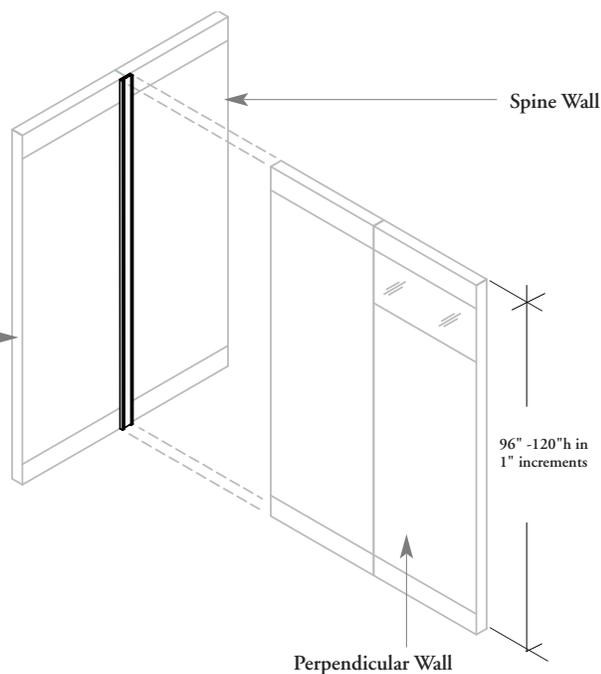

## module connection basics

The Three-Way 180° Module Connection provides options for on and off-module connections to an existing wall run.

130

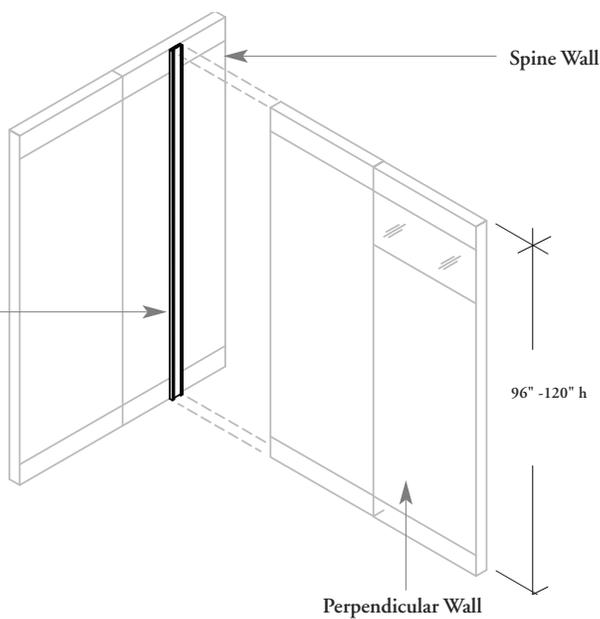

### Three-Way 180° Module Connection (FKM3\_1) (On-Module)

- Centers the connection at the vertical reveal between Fascias
- May **not** be attached at any other location

### Three-Way 180° Module Connection (FKM3\_2) (Off-Module)

- Creates a connection anywhere between reveals of Fascias
- May **not** be used at the vertical reveal
- Can be used at Solid and Double glass Fascias only
- Module Connection adds 1-1/4" Creep – this added dimension comes from the connection interface

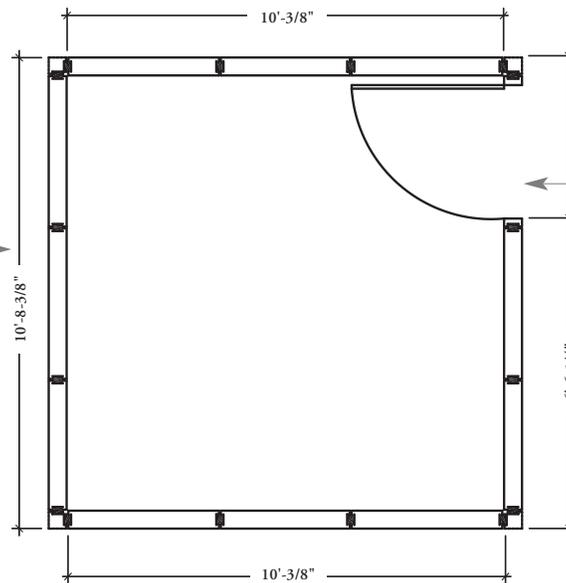

# wall gasket basics

The Wall Gasket (FKG) provides a light and sound seal between the bottom of the wall system and the finished floor and the top of the wall system and the ceiling.

⚠ Minor height variations in floor and ceiling surfaces may be concealed by the wall gasket

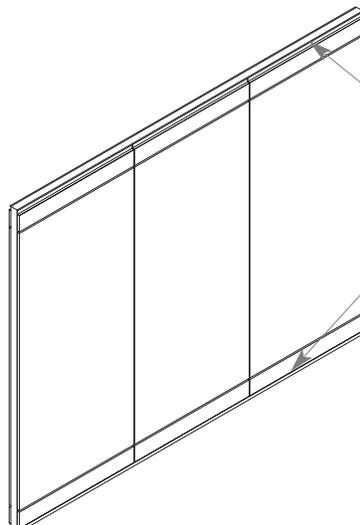

## determining wall gasket requirements

- Measure the entire wall run, excluding any doorway openings for bottom wall gasket only. Both elevations of a wall run require a Wall Gasket
- Any dimensional variations should be included in this calculation
- Wall Gaskets are required at both sides of a wall module at floor and ceiling junctions

For the Wall Gasket at Base do **not** include any doorway opening dimensions

The formula to determine the number of Wall Gaskets (FKG) required for the length of a wall run is the total linear footage of this product multiplied by 0.40 equals total number of Wall gaskets required.

### Wall Gasket (FKG)

- Required at both sides of a wall module at floor and ceiling junctions
- Used as a sound and light seal
- Is not required at the bottom of a doorway opening
