

# Traditional plan

By selectively applying appropriate functional options, District can serve the needs of traditional panel systems while maintaining the design aesthetic of architectural furniture.

- Large-scale windows or panel walls permit various degrees of enclosure and provide structure
- Elevated wall spans up to 96 inches wide make conventional workstations appear architectural
- Frost glass windows and screens create privacy while retaining light access
- Full-height windows and fascias present a refined, monolithic appearance ideal for corridor applications
- Single- or double-sided centermount cabinets provide added privacy and efficient space usage
- Fascia style options support functional needs including whiteboard, tackboard, accessory and power/data above or below the worksurface
- District minimizes visible hardware, supports and segments – every practical feature fits within a clean, contemporary design

WORKSURFACES:  
Foundation Laminate,  
Storm White, knife edge

PANEL WALL TRIM:  
Foundation, Storm White

FASCIAS:  
Interior – Seamless  
Color, Storm White;  
Panel Fabric,  
White Angle, White

Exterior – Flintwood,  
Blonde Maple

CRENZAS:  
Case – Seamless  
Color, Storm White  
Drawers – Flintwood,  
Blonde Maple

CENTERMOUNT  
CABINETS:  
Flintwood, Blonde Maple

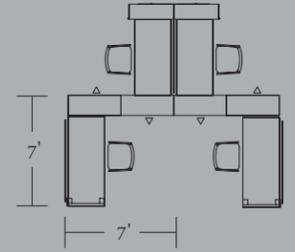

SEATING:  
Contessa, Upholstery –  
Tess Mesh, Light Grey

# Storage spine

In a standalone storage spine application, District creates a highly functional office landscape that provides extensive storage in varied configurations.

With storage as the primary framework for workstations, District opens up the range of potential planning scenarios to address the different ways people work. Storage units combine to define space, support workspaces and deliver power and data without dependency on panels.

- Storage units offer the option of an angled elevated foot to enable power/data routing below storage; users can access power/data above or below the worksurface
- Stacking units enable double-sided layouts with workstations extending from a shared central spine, enhancing functionality and permitting access to storage on both sides
- Open pass-through units permit varied degrees of privacy and allow for light transmission, creating an open workspace

# Sustainable design

In design and construction, District workstations are aligned with sustainable principles and with LEED® (Leadership in Energy and Environmental Design) guidelines that stress natural light and air circulation in commercial interiors. District is GREENGUARD® certified.

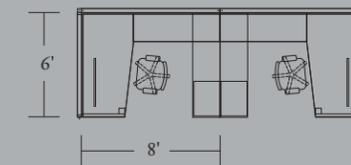

- Large workstation Windows in widths up to 96 inches preserve an open, lightfilled setting
- The option of datum lines at worksurface height reflects the emphasis on more transparent workstations for light and unobstructed views

- Elevated panel walls and credenzas permit a healthy air flow beneath and between workstations
- A typical workstation is composed of approximately 84 percent recycled materials and is designed for component and material re-utilization

## FINISHES AND MATERIALS

- Linoleum is made from all-natural raw materials and contributes to LEED MR Credit 6—Rapidly Renewable Materials
- Aluminum Acrylic edge band provides a PVC alternative
- Seamless Color paint emits low VOCs

- SmartLeather contains 32 percent recycled content and contributes to LEED MR Credit 4—Materials and Resources
- Teknion's natural veneers and Flintwood (reconstituted wood) are considered a controlled wood as defined by FSC (Forest Stewardship Council)

# Linear plan

District is ideal for linear floor plans where space is at a premium and workstation density is desired. With simple, furniture-like desks and credenzas District creates a light, open work environment that promotes collaboration and communication.

- Versatile multi-use components define a space in the most efficient and effective way
- Varied workstation formats that support different kinds of work can be created within the overall floor plan
